

Spindle axes ELGT-BS

FESTO

Key features

At a glance

- Compact design
- Optimised for use in the electronics and automotive industry:
materials include less than 1% copper and zinc
- Optimal ratio between installation space and working space due to the optimised axis design
- Simple integration of motors with motor mounting kits
- Position detection with inductive proximity switches SIES-8M and magnetic proximity switches SME/SMT-8M

Characteristic values of the axes

The specifications shown in the table are maximum values.

The precise values for each of the variants can be found in the relevant data sheet in the catalogue.

Data sheet

Weights [g]						
Size	90		120		160	
Spindle pitch [mm/rev]	10	20	10	20	10	20
Basic weight with 0 mm stroke	4380	4353	5259	5235	9564	9601
Additional weight per 10 mm stroke	104	102	124	122	188	189
Moving mass	1628	1645	2019	2036	3835	3842

Spindle						
Size	90		120		160	
Spindle pitch [mm/rev]	10	20	10	20	10	20
Diameter [mm]	16	15	16	15	20	

Mass moment of inertia						
Size	90		120		160	
Spindle pitch [mm/rev]	10	20	10	20	10	20
J_0 [kg mm ²]	12.52	22.91	13.06	26.54	31.75	63.42
J_H per metre stroke [kg mm ²]	34.53	25.22	34.53	25.22	80.9	90.27
J_L per kg payload [kg mm ²]	2.53	10.13	2.53	10.13	2.53	101.3
J_W slide [kg mm ²]	3.58	14.35	4.48	17.93	8.2	32.84

The mass moment of inertia J_A of the entire axis is calculated as follows:

$$J_A = J_0 + J_W + J_H \times \text{working stroke [m]} + J_L \times m_{\text{payload [kg]}}$$

Homing

Homing can be carried out in two ways:

- Against a fixed stop
- Using a reference switch

The following values must be observed:

Size	90	120	160
Max. impact energy [mJ]	2		
At max. speed of the homing travel [m/s]	0.01		
With max. payload [kg]	40

Data sheet

Characteristic load values

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

Distance from the slide surface to the centre of the guide

Max. permissible forces and torques for a service life of 5000 km

Size	90	120	160
$F_{y\max}$ [N]	4710	6800	9550
$F_{z\max}$ [N]	5600	8090	11370

Ball screw drive

Dynamic c_{dyn} [N]	10700	7100	10700	7100	19400	8200
Static C_0	22700	14700	22700	14700	50100	18600

 Note

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of $f_v \leq 1$, based on the maximum permissible forces and torques for a service life of 5000 km.

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

F_1/M_1 = dynamic value

F_2/M_2 = maximum value

Data sheet

Calculating the service life

The service life of the guide depends on the load. To be able to make a statement as to the service life of the guide, the graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor f_v greater than 1.

Load comparison factor f_v as a function of service life l

Example:

A user wants to move an x kg load. Using the formula (→ page 8) gives a value of 1.5 for the load comparison factor f_v . According to the graph, the guide would have a service life of approx. 1 500 km. Reducing the acceleration reduces the M_y and M_z values. A load comparison factor f_v of 1 now gives a service life of 5000 km.

Comparison of the characteristic load values for 5000 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km to ISO or 50 km to JIS. As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes ELGT with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Size		90	120	160
$F_{y_{max}}$	[N]	17352	25051	35183

Maximum permissible support spacing L (without profile mounting EAHF) as a function of force F

In order to limit deflection in the case of large strokes, the axis may need to be supported.
 The following graphs can be used to determine the maximum permissible support spacing l as a function of force F acting on the axis. The deflection is $f = 0.5$ mm.

Size 90

Size 120

Size 160

— Fy
 - - - Fz

Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functionality of the axes.

Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dynamic deflection (moving load)	Static deflection (stationary load)
90 ... 160	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

Accessories

Adapter kit EHAM-MA-L9...

Material:

Anodised wrought aluminium alloy

RoHS-compliant

- For axis/axis mounting with adapter plate
- Mounting option: base axis with one-size-down assembly axis
- When motors are mounted using parallel kits, this may lead to interfering contours. In this case, the adapter plate is required for height compensation (download CAD data → www.festo.com)
- Overview of mounting options → page 24

RoHS-compliant

- For axis/axis mounting with adapter plate
- Mounting option: base axis with one-size-down assembly axis
- When motors are mounted using parallel kits, this may lead to interfering contours. In this case, the adapter plate is required for height compensation (download CAD data → www.festo.com)
- Overview of mounting options → page 24

Accessories

-  - Note

Depending on the combination of motor and drive, it may not be possible to reach the maximum feed force of the drive.

When using parallel kits, the no-load driving torque of the particular kit must be taken into consideration.

Permissible axis/motor combinations with axial kit – Without gear unit

Data sheets → Internet: eamm-a

Accessories

Profile mounting EAHF-L2-...-P

Material:

Anodised wrought aluminium alloy

RoHS-compliant

- For mounting the axis on the side of the profile.

The profile mounting can be attached to the mounting surface using the drilled hole in the centre.
