

## Rotary modules ERMB, electric

FESTO

## Characteristics

### At a glance

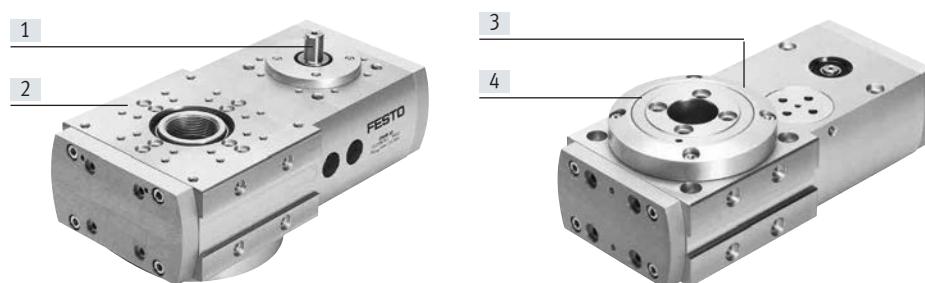

The rotary module ERMB facilitates unlimited and flexible rotation angles. The motor's power is transmitted to the output pinion via a recirculating toothed belt with a specific transmission ratio. The drive and output pinions run on separate bearings. The toothed belt is pretensioned at the factory using an eccentric tensioning roller.

### Advantages:

- Stable output shaft bearings
- Pretensioned toothed belt means low backlash
- Compact design

### The technology in detail

- [1] Interface with the motor, via axial kit  
 [2] Interface for mounting  
 [3] Mounting for proximity switches SIEN in the retaining ring  
 [4] Output interface

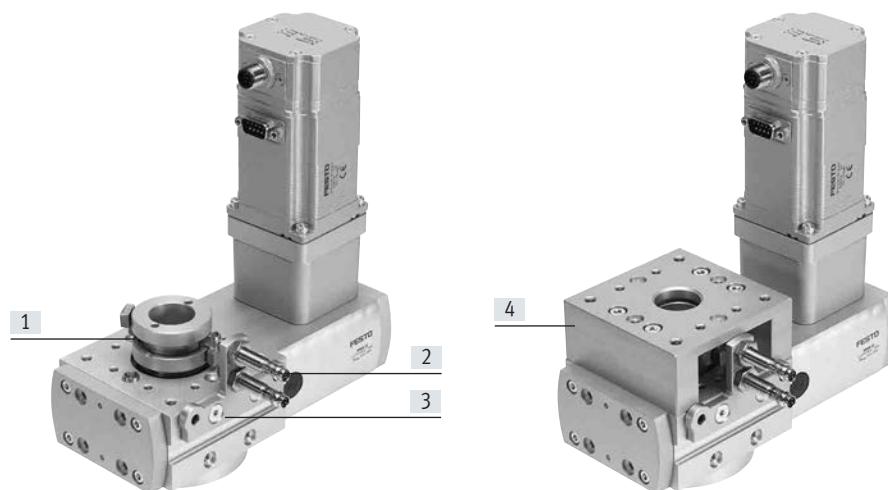

### Sensing kit EAPS as an accessory

→ Page 23

With the sensing kit, the angle of rotation can be monitored using adjustable cams. The kit can also be used for reference checking.

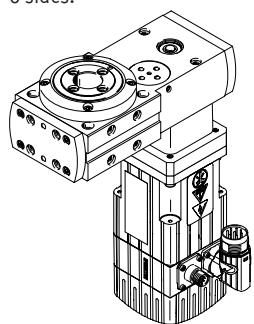

- [1] Trip cam support  
 [2] Proximity switches SIEN  
 [3] Sensor bracket  
 [4] Housing

### Mounting and installation options

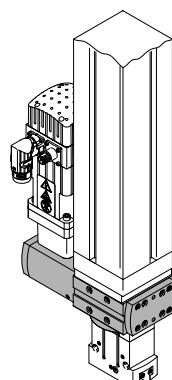

#### Mounting option

The rotary module can be mounted on 6 sides.

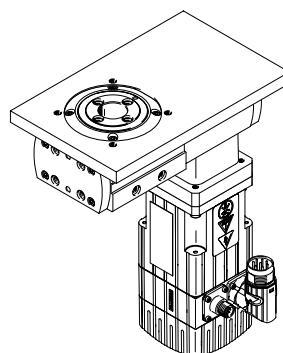

#### Installation option

##### As a front unit

##### As a rotary table in a plate

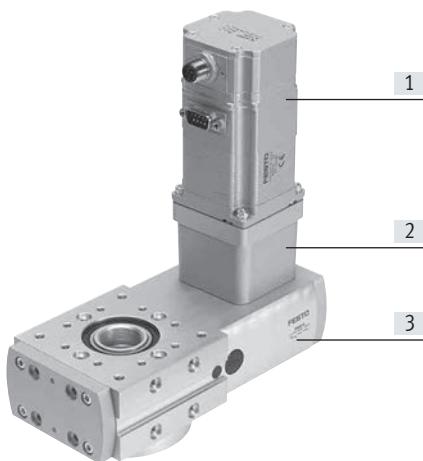

## Characteristics

### Total system comprising rotary module, motor and axial kit

Rotary module

  - Screws

Peripherals overview

## Peripherals overview and type codes

Accessories			→ Page/Internet
Type	Description		
[1] Sensing kit EAPS	For indicating impermissible angles of rotation, i.e. obstacles or areas that cannot be approached can be sensed using proximity switches (comprising: housing, trip cam support, 2 cams and sensor bracket)		23
[2] Proximity switch SIEN	For use as a signal or safety check		23
[3] Adapter kit	Interface between the rotary module and drive (the rotary module can be mounted on a drive with or without a sensing kit)		adapter kit
[4] Adapter kit	Interface between the rotary module and gripper		adapter kit
[5] Rotary module ERMB	Facilitates unlimited and flexible rotation angles		23
[6] Axial kit EAMM-A	For axial motor mounting (consisting of: coupling, coupling housing and motor flange)		18
[7] Motor EMMS, EMME, EMCA	<ul style="list-style-type: none"> <li>• Motors specially matched to the axis, with or without brake</li> <li>• The motor can be turned 90° when mounting, depending on the requirement. This means the connection side can be freely selected</li> </ul>		18

## Data sheet

- Ø - Size  
20, 25, 32

 www.festo.com

General technical data			
Size	20	25	32
Design	Electromechanical rotary module with toothed belt		
Drive pinion diameter [mm]	6	8	12
Rotation angle	Infinite		
Repetition accuracy <sup>1)</sup>			
with servo motor EMMS-AS [°]	±0.03		
with stepper motor EMMS-ST <sup>2)</sup> [°]	±0.08		
with integrated drive EMCA [°]	±0.05		
Positioning times	→ Page 9		
Transmission ratio	4.5:1	4:1	3:1
Position sensing	Via proximity switch		
Mounting position	Any		
Product weight [g]	850	1460	3250

1) As per FN 942 027. The specifications apply only when the motor is directly mounted. If a gear unit is also installed, the repetition accuracy will be different

2) Dependent on the encoder resolution

Mechanical data			
Size	20	25	32
Max. driving torque [Nm]	0.7	2.2	8.5
Max. output torque <sup>1)</sup> [Nm]	3.15	8.8	25.5
Average no-load driving torque <sup>2)</sup> [Nm]	< 0.07	< 0.18	≤ 0.5
Max. input speed [rpm]	1350	1200	900
Max. output speed [rpm]	300	300	300
Toothed belt pitch	2	3	5
Hollow shaft diameter [mm]	20	24	28

1) Output torque minus friction is dependent on rotational speed

2) At maximum rotational speed

Operating and environmental conditions			
Size	20	25	32
Ambient temperature [°C]	-10 ... +60		
Degree of protection	IP20		
Corrosion resistance CRC <sup>1)</sup>	2		
Sound pressure level <sup>2)</sup> [dB (A)]	32	49	53

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

2) In combination with servo motor EMMS-AS

## Data sheet

<b>Mechanical data</b>			
Size	20	25	32
Max. mass moment of inertia <sup>1)</sup>	[kgcm <sup>2</sup> ]	1000	5000
Max. inertia factor <sup>2)</sup>			
for servo motor EMMS-AS/EMME-AS	45		
for stepper motor EMMS-ST	30		
for integrated drive EMCA	16		

1) These values specify the upper limit independently of what is determined using the inertia factor.

2) The inertia factor represents the maximum controllable ratio between the inertia of the load and the intrinsic inertia of the motor with brake.

### Example:

Rotary lifting module ERMB-20 → transmission ratio  $i = 4.5$

Motor EMME-AS-40-S with brake → intrinsic inertia  $0.055 \text{ kgcm}^2$

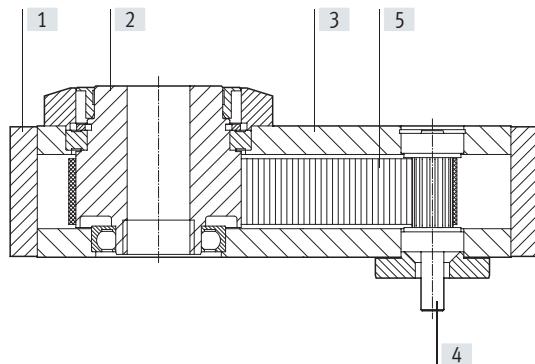

Gear unit EMGA-40-P-G3-40 → transmission ratio  $i = 3$

Limit for inertia of the load (+ intrinsic inertia) on the output side:

$$0.055 \text{ kgcm}^2 \times 45 \times 3^2 \times 4.5^2 = 451 \text{ kgcm}^2$$

## Materials

### Sectional view

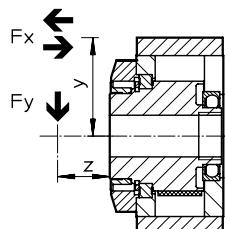

### Rotary module

[1] Cover	Anodised aluminium
[2] Output shaft	Anodised wrought aluminium alloy
[3] Housing	Anodised wrought aluminium alloy
[4] Drive shaft	High-alloy stainless steel
[5] Toothed belt	Polychloroprene with glass fibre
Note on materials	Contains paint-wetting impairment substances

## Data sheet

### Maximum radial and axial force Fx/Fy on the output shaft as a function of the distance y/z

If the rotary module is simultaneously subjected to several forces, the following equation must be satisfied in addition to the maximum loads indicated below.

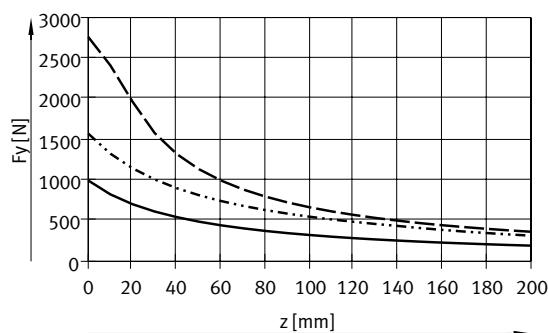

$$\frac{F_{y(z)}}{F_{y \max. (z)}} + \frac{F_{1x(v)}}{F_{1x \max. (v)}} + \frac{F_{2x(v)}}{F_{2x \max. (v)}} \leq 1$$

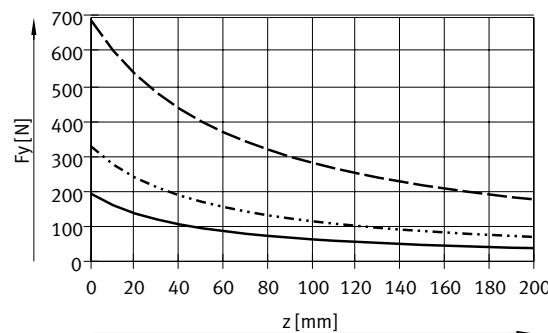

F<sub>1x</sub> = pushing

F<sub>2x</sub> = pulling

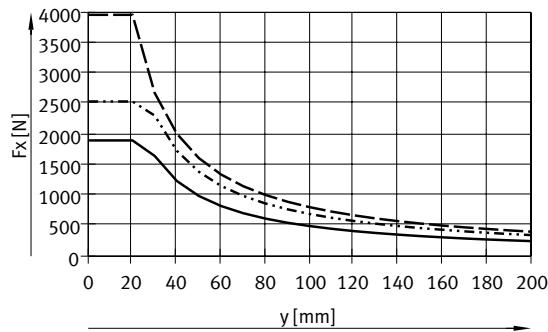

Max. radial force F<sub>y</sub>, static

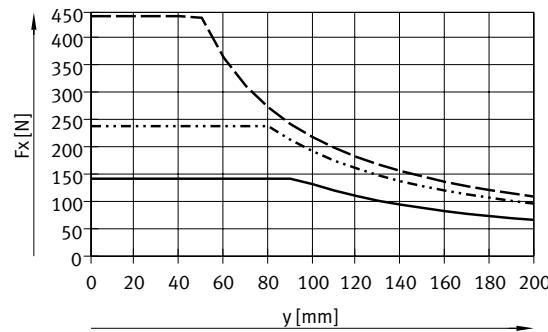

Max. radial force F<sub>y</sub>, dynamic

Max. axial force F<sub>x</sub>, static, pushing and pulling

Max. axial force F<sub>x</sub>, dynamic, pushing and pulling

## Data sheet

### Positioning time $t$ as a function of the rotation angle $\alpha$

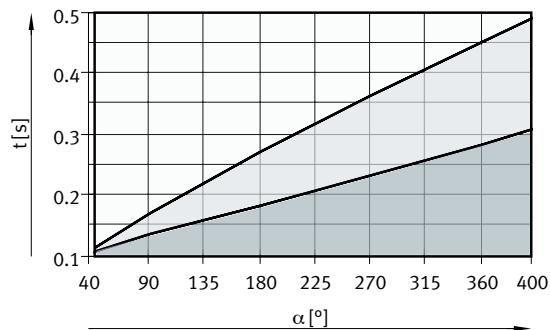

Size 20

With servo motor EMMS-AS

- Extended operating range
- Typical operating range, depending on the size of the motor and the inertia of the load
- Non-viable range

With stepper motor EMMS-ST

- Extended operating range
- Typical operating range, depending on the size of the motor and the inertia of the load
- Non-viable range

#### Note

The positioning time  $t$  ends with the controller signal MC (motion complete), i.e. on the drive side.

Increased positioning times are to be expected at the output shaft depending on the motor type and eccentricity of the moving load.

For servo motor: 50 ... 100 ms

For stepper motor: 100 ... 200 ms

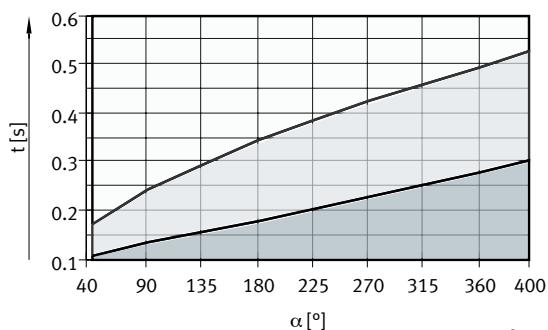

The engineering software "Electric Motion Sizing" compiles the optimum combination of rotary module and motor according to the application with regard to mass moment of inertia, positioning time, and positioning accuracy → [www.festo.com](http://www.festo.com)

## Data sheet

Positioning time  $t$  as a function of the rotation angle  $\alpha$ 

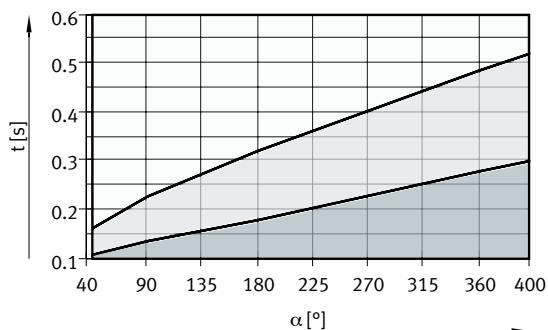

Size 25

With servo motor EMMS-AS

- Extended operating range
- Typical operating range, depending on the size of the motor and the inertia of the load
- Non-viable range

With stepper motor EMMS-ST

- Extended operating range
- Typical operating range, depending on the size of the motor and the inertia of the load
- Non-viable range

- - Note

The positioning time  $t$  ends with the controller signal MC (motion complete), i.e. on the drive side.

Increased positioning times are to be expected at the output shaft depending on the motor type and eccentricity of the moving load.

For servo motor: 50 ... 100 ms

For stepper motor: 100 ... 200 ms

## Data sheet

### Information on service life values

Within the scope of the product qualification, the specified static stress cycles/switching cycles were reached using 3 test objects.

#### Definition of stress cycle/switching cycle:

One switching cycle corresponds to two stress cycles: Position A to Position B and back.

Size	20	25	32
Stress cycle reference value [million]	30	40	40
Switching cycle reference value [million]	15	20	20
Mass moment of inertia on output [kgcm <sup>2</sup> ]	24	80	400
Average angular acceleration on output [°/sec <sup>2</sup> ]	28000	20000	12000
Maximum angular velocity on output [°/sec]	1800	1800	1800

The static stress cycles/switching cycles specified above were achieved under the following, defined operating conditions: horizontal, hanging installation, 180° swivel angle, frequency 2 Hz, mass moment of inertia, acceleration (vibration-free) and max. angular velocity according to the table, room temperature (23 ± 5) °C.

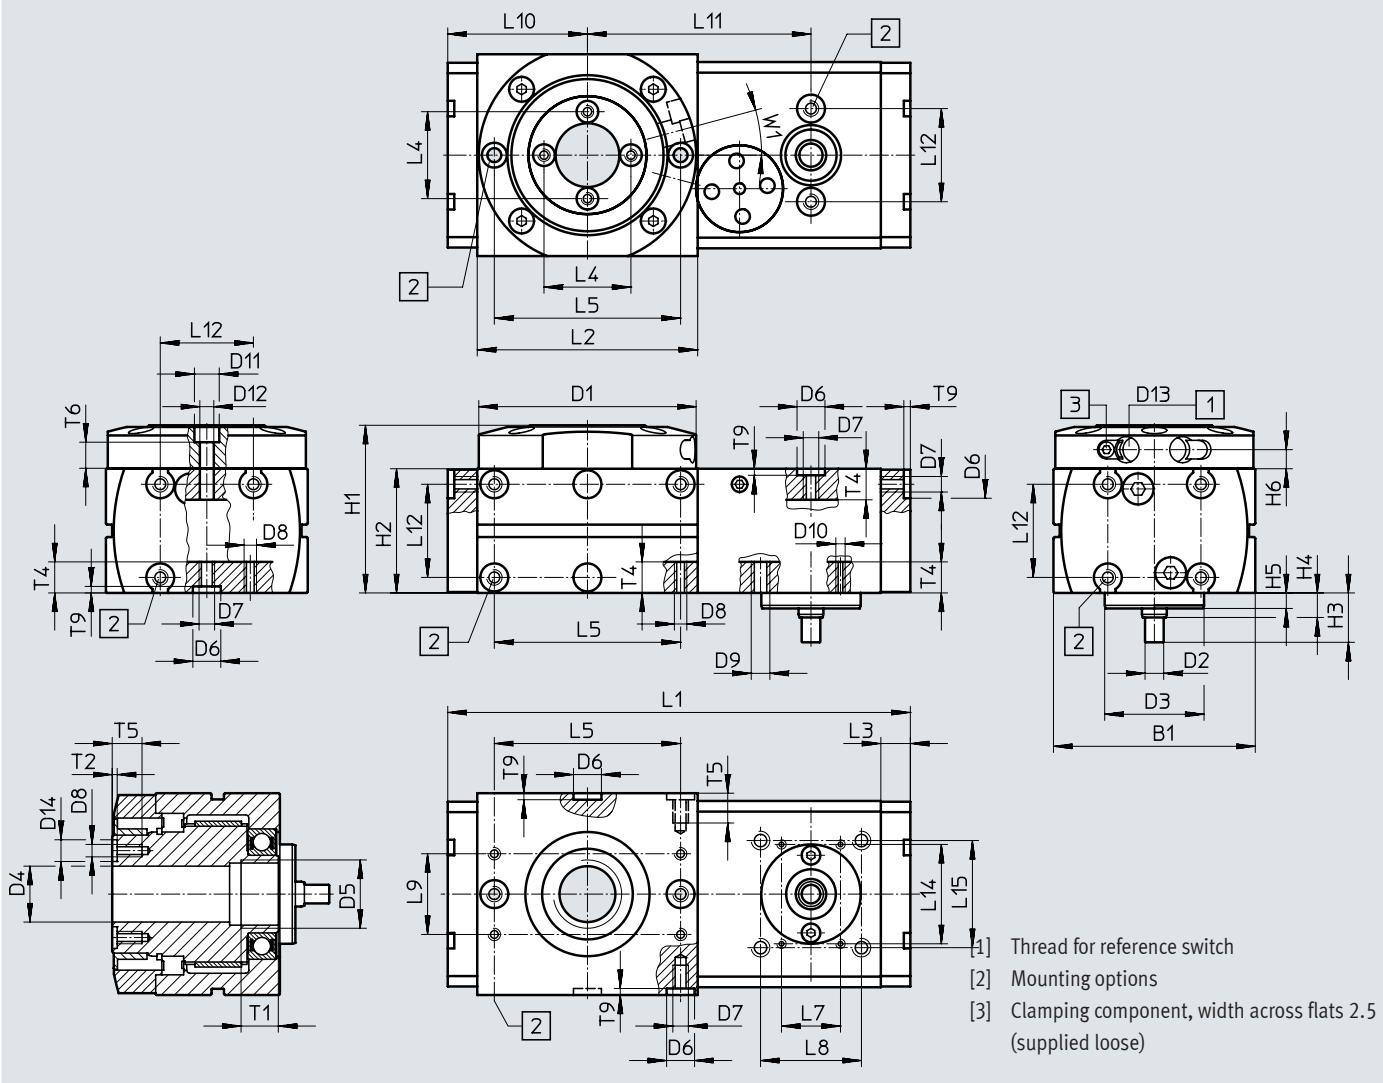

Under deviating operating conditions, a shorter or longer service life may be achieved.

In addition, the working conditions and safety regulations specified in the product documentation must be observed.

1) The input torque must not exceed the maximum permissible transferable torque of the axial kit.

2) The axial kit can be retrofitted from IP40 to IP65 with the help of a seal set EADS-F. Additional information → eamm-a

## Accessories

## Adapter kit

**HAPB**

## Material:

Wrought aluminium alloy  
Free of copper and PTFE  
RoHS-compliant

**Note**

The kit includes the individual mounting interface as well as the necessary mounting material.

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.
