### Tube mounting/dismounting

#### Attaching

The prerequisite for ensuring that the inner seal is securely held and protected against damage is that the tube is cut into straight lengths and deburred.

1) Insert tubing as far as the stop.

It is important to ensure that the tubing is inserted into the inner seal. Depending on the tolerance between the tubing and the seal, the contact of the tubing with the seal may be wrongly interpreted as the stop.

2) Check that the tubing connection is secure by pulling gently on the tube.

#### Dismantling

1) The tubing can be detached easily by pressing and holding down the releasing ring. Remove the tubing carefully from the fitting.

2) Before re-using the tubing, remove the damaged part by cutting it off.
