## Method of measurement

Bending radius relevant for flow rate  $R_d$

The tubing is bent in the direction of its curvature until a flattening corresponding to 5% of the tubing O.D. occurs.  
 $R_d$  is then calculated mathematically. The flow rate is not reduced until  $R_d$  is reached.

Cross section flattened by bending the tubing.

$d$  = Non-deformed tubing O.D.

$d_1$  = Deformed tubing O.D.

## Minimum bending radius $R_{min}$

The tubing fixed to the base plate is bent until the deformation results in a kink. The measured value is the minimum bending radius  $R_{min}$ . This  $R_{min}$  results in significant reductions in flow rate.

Technical data

## Plastic tubing PEN

Compressed air tubing made of polyethylene is distinguished by great resistance to chemicals and hydrolysis. It is resistant to most cleaning agents and lubricants.
