

Position transmitters, proximity sensors SDAS-MHS for T-slot

FESTO

Characteristics

General

The SDAS-MHS is used for contactless feedback of the piston position of drives with magnetic proximity sensing. It combines two functions into a single device.

1. As a position transmitter, it provides an output signal proportional to the motion within the sensing range, with the signal being made available in the IO-Link communication standard. Furthermore, 4 channels can be programmed via IO-Link as proximity sensor, window comparator or hysteresis comparator.

2. As a programmable proximity sensor, the SDAS-MHS provides binary feedback of the piston position which is made available as a standard 24 V output signal. Additionally, two proximity sensor switching points can be taught in within the sensing range via a capacitive operating button directly on the device.

Thanks to its extremely compact design, the SDAS-MHS is the ideal solution for grippers, compact cylinders and all applications with limited installation space.

Note

It can be used with Festo drives with T-slot (profile slot 8) as well as round cylinders and tie-rod cylinders with mounting kits. A selection aid with suitable drives can be found below.

Position transmitter

---- Output signal (PDV): direction of increase inverted
 — Output signal (PDV): direction of increase as per delivery status

- | | |
|-------------------------------------|----------|
| [1] PDV (position data values) | [3] SSC2 |
| [2] SSC1 (switching signal channel) | [4] SSC3 |
| | [5] SSC4 |

Applications:

Good/bad part sorting, press-fitting, riveting, ultrasonic welding etc.

Proximity sensor

- | |
|-------------------------|
| [1] Electrical output 1 |
| [2] Electrical output 2 |

Applications:

Two proximity sensors in one device to save space on compact drives and to save time during assembly and commissioning.

Characteristics

Note

Sensing range [mm]:

Specification for operating mode as **position transmitter**; typical value.

In operating mode as **proximity sensor**, the sensing range in which switching points can be set is reduced at the right- and left-hand edge by approx. 5% in each case on account of the required functional reserve.

Operating mode:
Proximity sensor

General technical data

Design	For T-slot
Mounting position	Any
Type of mounting	Screwed tightly
Application information	Support / Overview of actuator sensors "The right sensor for the actuator"
Certification	RCM compliance mark
KC mark	KC EMC
CE marking (see declaration of conformity)	To EU EMC Directive To EU RoHS Directive
UKCA marking (see declaration of conformity)	To UK instructions for EMC To UK RoHS instructions
Degree of protection	IP65, IP68
Note on materials	RoHS-compliant Halogen-free
PWIS conformity	VDMA24364-B2-L

- 1) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.
If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

Sensors

Measured variable		Position
Measuring principle		Magnetic Hall
Sensing range	[mm]	≤ 52
Ambient temperature	[°C]	-40 ... +80
Typical sampling interval	[ms]	2
Max. travel speed	[m/s]	3
Path resolution	[mm]	≤ 0.02
Repetition accuracy	[mm]	0.2
Typical linearity error	[mm]	±1

Electronics – General

Operating voltage range	[V DC]	10 ... 30
Residual ripple	[%]	10
Reverse polarity protection		For all electrical connections
