

Cylinder/valve combination DNCV, standard port pattern

Cylinder/valve combination DNCV, standard port pattern

Key features

FESTO

Easy to assemble

- Fully assembled and tested drive unit
- Lower costs for ordering, installation and commissioning
- Direct mounting
- Integrated proximity sensors for position sensing
- Integrated exhaust air flow control

Compatible

- Comprehensive range of accessories from the standard cylinder modular system
- Multi-pin connection as interface to PLC, ASi module or CPX terminal (various bus protocols)
- Standards-based cylinders to ISO 15552 (corresponds to the withdrawn standards ISO 6431, DIN ISO 6431, VDMA 24 562, NF E 49 003.1 and UNI 10290)

Flexible

- Integrated 5/2-way or 5/3-way valves
- Optional diagnostic module for monitoring of stroke duration and number of strokes

Reliable

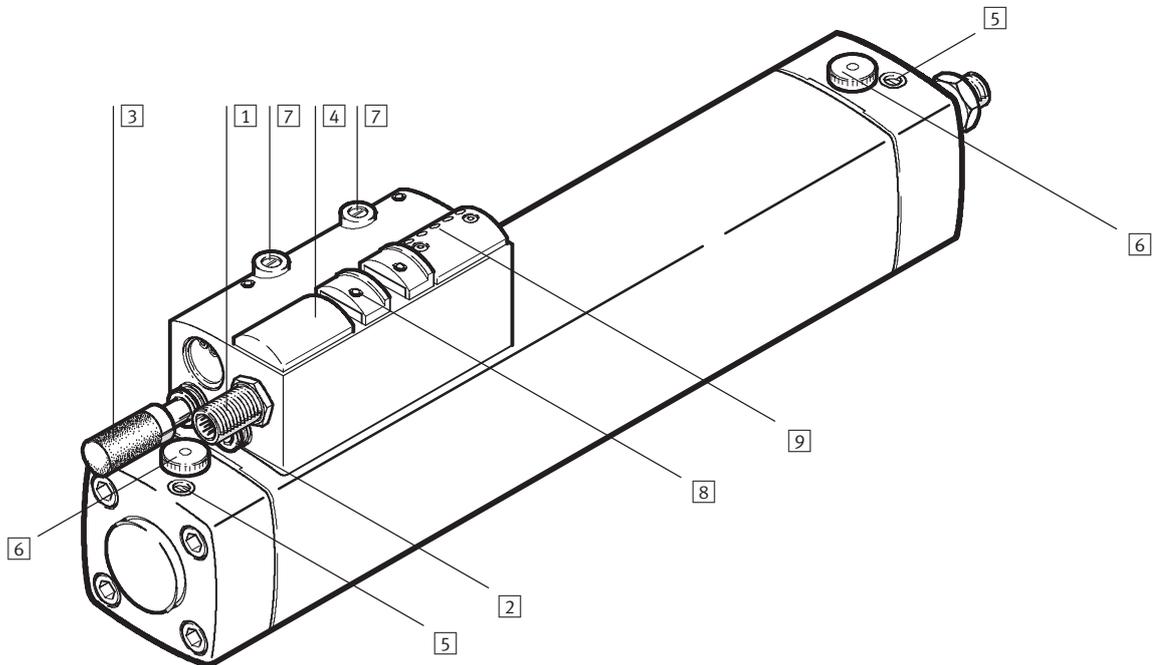

- Status displays for piston position and valve actuation
- Rapid response times through direct connection of the valve and drive
- Adjustable pneumatic end-position cushioning
- Manual override

Cylinder/valve combination DNCV, standard port pattern

Key features

FESTO

High functionality

1 Multi-pin connection,
M12 plug, 8-pin

2 Supply port
(QS push-in fitting)

3 Silencer (QS push-in fitting for
exhaust air)

4 Valve

5 Regulating screw for pneumatic
end-position cushioning PPV

6 Adjusting knob for fine
adjustment of the position of
the integrated proximity sensors
(removable to prevent
inadvertent resetting)

7 Regulating screws for stroke
speed, separated for forward
and return stroke

8 Manual override, non-detenting
or detenting

9 Diagnostic module (optional)
with LEDs for displaying the
piston position, valve switching
status and for diagnosis of
stroke duration and number of
strokes

Cylinder/valve combination DNCV, standard port pattern

Key features

Valve		Valve	
Circuit symbol	Description	Circuit symbol	Description
5/2L 	5/2-way valve, single solenoid with spring return: The valve is normally closed, the piston rod retracts.	5/2LA 	5/2-way valve, single solenoid with spring return: The valve is normally open, the piston rod advances.
5/2J 	5/2-way valve, double solenoid (bistable valve): The valve does not have a defined normal position; instead it requires the electrical actuator or manual override for a defined switching status. The piston rod therefore retracts or advances in accordance with the current valve position.	5/3B 	5/3-way valve, pressurised in mid-position: The piston rod advances when the valve is in the normal position due to the differential piston areas.
5/3E 	5/3-way valve, exhausted in mid-position: In the normal valve position, the piston rod is not subjected to any pressure forces; the piston rod can therefore be moved freely.	5/3G 	5/3-way valve, closed in mid-position: The piston rod is subjected to pressure when the valve is in the normal position and therefore remains in the current position. The piston rod may, however, drift when external forces are present; it is particularly important to be aware of this in the case of vertical cylinder configurations.

Manual override		Manual override	
Function diagram	Description	Function diagram	Description
	Non-detenting actuation: The manual override is activated using a pointed object.		Detenting actuation: The manual override is actuated by moving the slide.

Cylinder/valve combination DNCV, standard port pattern

Key features

FESTO

Basic diagnosis

Proximity switch monitoring:

Display of the piston position (retracted or advanced end position).

The diagnostic LED lights up in the case of double signalling. The error signal is not output to the controller.

Diagnostic module DNCV-...-D (optional, expandable)

Proximity switch monitoring:

In the event of a malfunction or double signalling, apart from the diagnostic LED lighting up, the signal level at the diagnostic output also changes from 24 V to 0 V.

Monitoring of stroke duration:

The motion duration for the forward and return stroke is compared with a limit value that is pre-selected using DIP switches. This limit value can be adjusted in increments from 0.1 s to max. 6.3 s. If the limit value is exceeded, the diagnostic LED lights up and the signal level at the diagnostic output changes from 24 V to 0 V.

Monitoring of number of strokes:

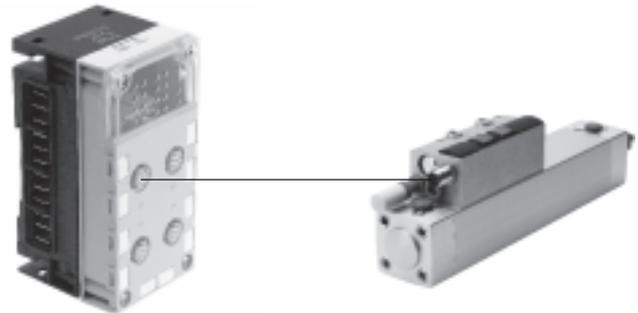

The number of strokes is compared with a limit value that is pre-selected using DIP switches. This limit value can be adjusted in increments from 10,000 strokes to max. 630,000 strokes. If this limit value is exceeded, the diagnostic LED flashes and the signal level at the diagnostic output changes from 24 V to 0 V. This change in signal level can also be deactivated.

CPX connection

Support via a connection block equipped with four M12 sockets means that up to 4 cylinder/valve combinations with integrated proximity sensors can be connected. Two inputs and two outputs per socket are supported for each cylinder/valve combination. It is therefore possible to control max. 2 solenoid coils and

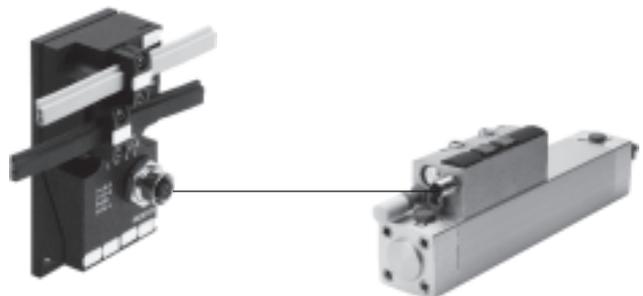

record input signals from 2 proximity sensors with a pre-assembled cable. Two inputs on two sockets are bridged to provide support for the diagnostic module of the cylinder/valve combination so that 2 cylinder/valve combinations with diagnostic modules can be connected.

AS-interface®

Special interface module, configured for the cylinder/valve combination with integrated diagnostic module. This allows easy and flexible connection of the cylinder/valve combination in upstream applications to the AS-interface. Two inputs and

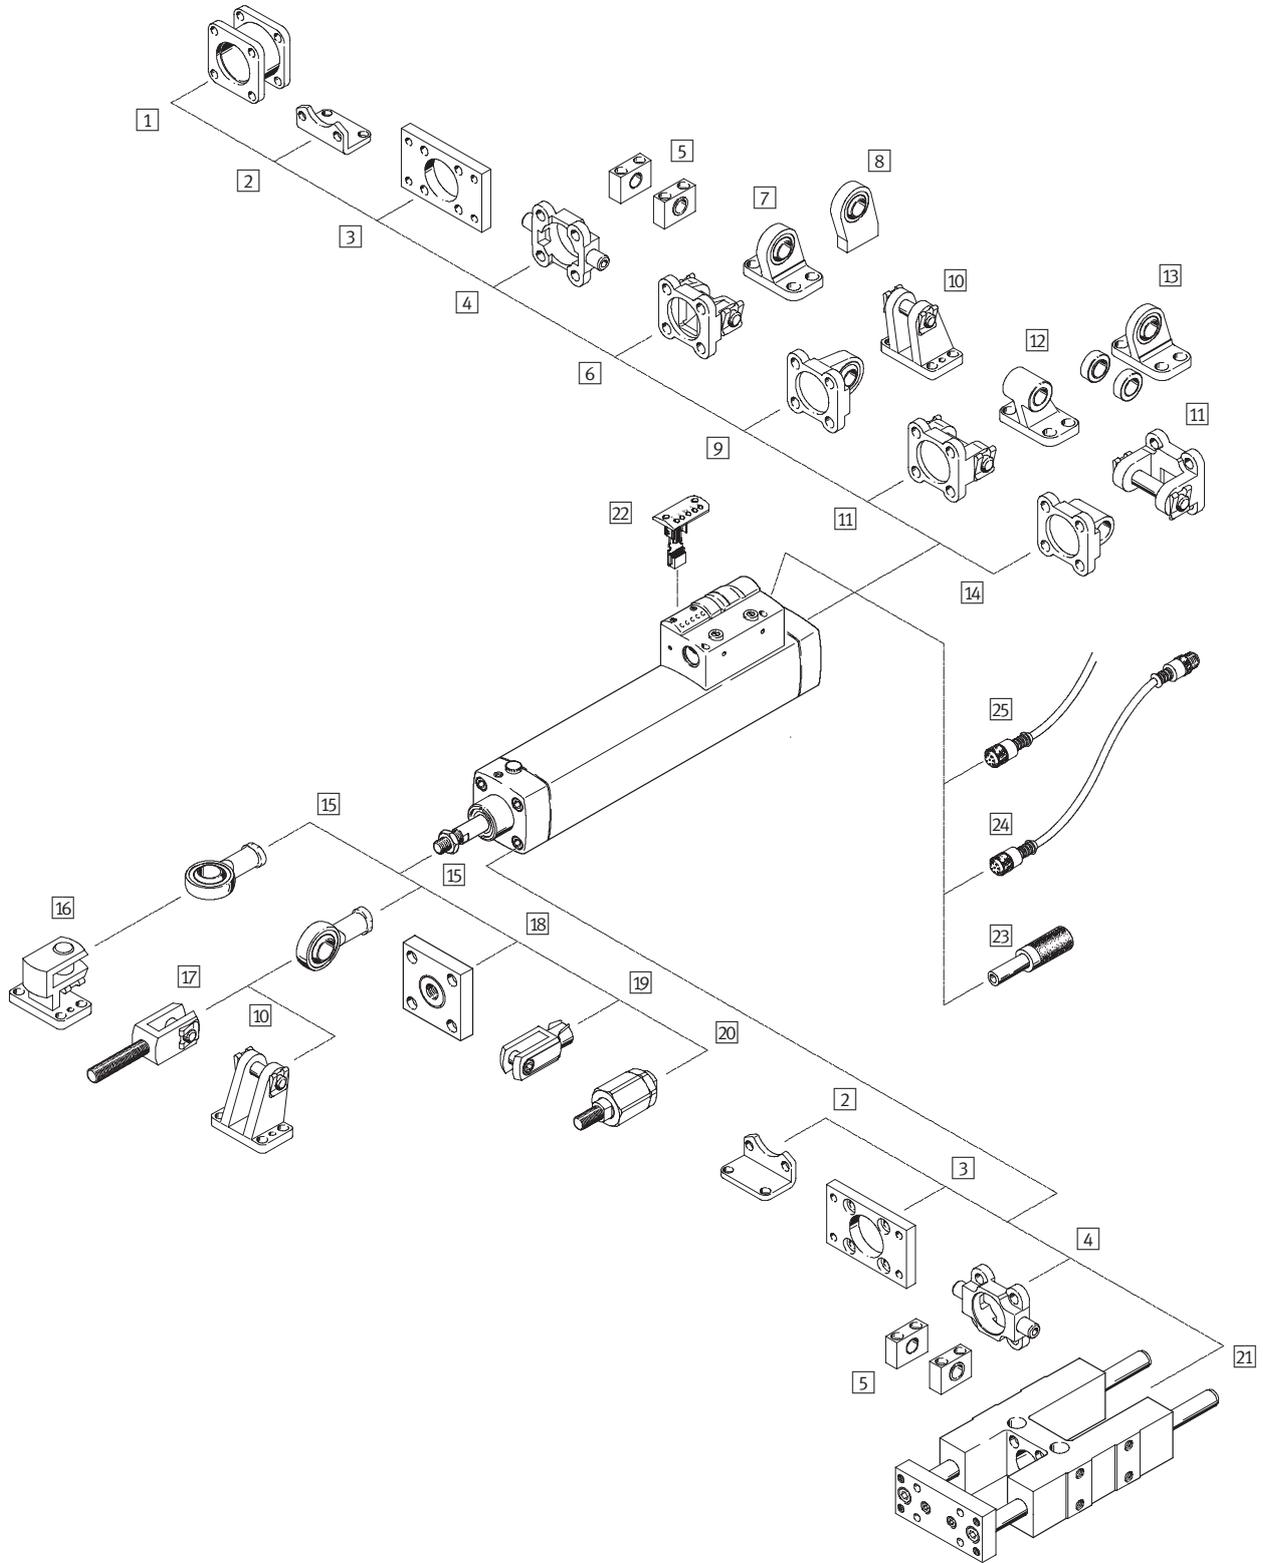

two outputs as well as a diagnostic input on one 8-pin M12 socket. Optimised design for cylinder/valve combination with integrated diagnostic module. Ready-to-connect cable KM12-8GD8GS-2-PU for Festo plug and work™ installation.

1) Corrosion resistance class 2 according to Festo standard 940 070
 Components requiring moderate corrosion resistance. Externally visible parts with primarily decorative surface requirements which are in direct contact with a surrounding industrial atmosphere or media such as cooling or lubricating agents.
 Corrosion resistance class 4 according to Festo standard 940 070
 Components requiring higher corrosion resistance. Parts used with aggressive media, e.g. food or chemical industry. These applications should be supported with special tests with the media if required.

63	28	159.5	1000	360	174 421	DPNC-63

 Note

The maximum overall stroke length may not be exceeded when combining cylinders and multi-position kits.

Connecting two cylinders with identical piston \varnothing as a 3 or 4-position cylinder

A 3 or 4-position cylinder consists of two separate cylinders whose piston rods advance in opposing directions.

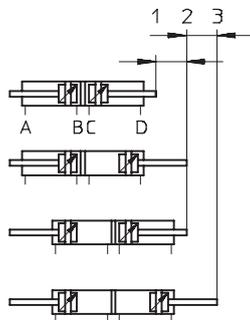

Depending upon actuation and stroke pattern, this type of cylinder can assume up to four positions. In each

case the cylinder is driven precisely against a stop. If one end of the piston rod is fixed, the cylinder barrel

executes the movement. The cylinder must be connected with flexible line connections.

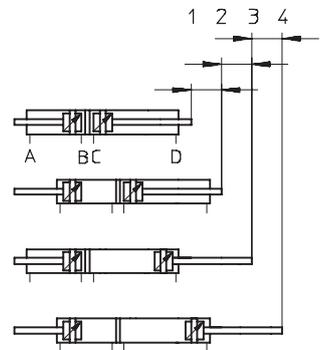

Implementing 3 positions

Two cylinders with identical stroke length must be connected to this end.

Implementing 4 positions

Two cylinders with different stroke lengths must be connected to this end.

Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drives

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
