

Servo press kits YJKP

FESTO

Characteristics

At a glance

The servo press kit and its associated application software can be used to respond quickly and flexibly to a range of press processes. It is a great alternative to complex and often oversized presses.

The software can be used for continuously monitoring parameters such as moments of force and displacement during joining and press-fitting processes.

Advantages:

- Pressing forces up to 17 kN (higher force ranges on request)
- Very high positioning and repetition accuracy
- Ideal price/performance ratio
- Easy integration into any application

Sample pressing device

Individual components:

- [1] Servo motor
- [2] Electric cylinder
- [3] Force sensor (incl. inspection record)
- [4] Software package
- [5] Motor controller
- [6] Controller (incl. micro SD memory card)

Motor/encoder cables are included in the scope of delivery.

Areas of application

Characteristics

Modular application software for configuration, operation and visualisation

- The application is controlled via a web interface, which is also used for configuring the application-specific functions
- No programming skills are required to use the pre-installed, ready-to-use software
- A non-platform-specific software display allows visualisation on all kinds of human-machine interfaces (HMIs) with a web browser, such as touchscreens, PCs, iPads, mobile phones, etc.
- The program sequence itself is controlled by variables and digital control inputs, e.g. by the higher-order controller
- All recorded process data can be interchanged individually with the HOST system

The following software functions are available

Commissioning

- Configuring the hardware
- Carrying out homing
- Taring and adjusting the force sensor
- Moving the press manually in “jog” mode
- Configuring logging
- Making fundamental system settings

Writing a program

- Managing programs
- Defining press processes and parameterising and configuring them using the sequencer
- Recording/loading reference curves
- Configuring the threshold values/envelopes/windowing evaluation methods
- Managing individual variables

Operation

- Selecting saved press programs
- Recording and displaying reference curves
- Allowing OK/NOK evaluation of pressed parts
- Logging

The interfaces enable the GUI (graphical user interface), the PLC and the host to be selected and defined.

Diagnostics

- Process diagnostics
- Sensing of various system parameters, system status and statistical values
- Enabling the display of current data/statuses for the various interfaces, such as digital I/Os or data transferred by a host PLC.

Software functions

Max. number of press programs	20 (expandable using variables)
Max. number of variables	100
Number of digital inputs for program control	
Software inputs	8 inputs/8 outputs
Hardware inputs	8 inputs/4 outputs
Max. possible measurements ¹⁾	5
Max. number of measuring points ¹⁾	200000
Number of envelopes ²⁾	5
Number of evaluation windows ²⁾	5
Number of threshold values ²⁾	5
Max. possible points per envelope	5 top/5 bottom
Evaluation results via	DIO/fieldbus/PC visualisation
Data export via	FTP, SMB

1) Per program

2) Per measurement

Connection to higher-order controller¹⁾

1) The function modules can be downloaded for free from the Support Portal.

Characteristics

Ordering via the configurator

It is very easy to put together and order a wide range of servo press kits using the configurator.

The "Configuration", "Preassembly" and "Accessories" tabs are used to select the combinations and display them with the correct configuration.

CAD files and ePLAN macros included.

Ordering data – Product options

Configurable product
This product and all its product options can be ordered using the configurator.

The configurator can be found under
Products on the DVD or at
→ www.festo.com/catalogue/...

Part no.	Type
8077950	YJKP

System components

Included in the scope of delivery of the servo press kit

Electric cylinder

- With force sensor
 - Connecting cable to controller (cable lengths of 5, 10, 15 m)
- Optionally with:
- Motors with absolute displacement encoder:
 - Single-turn
 - Multi-turn
 - Motors with/without holding brake
 - Axial or parallel motor attachment (pre-assembled if required)

Motor controller

- For servo motor

Controller

- With special software
- With connecting cable to the motor controller

Motor cable

- Pre-assembled cable

Encoder cable

- Pre-assembled cable

Connecting cable

- Pre-assembled cable for commissioning the controller

Connecting cable

- Pre-assembled cable for CANopen interface

Connecting cable

- Screened cable for force sensor

Micro SD memory card

- 32 GB micro SD card for storing the created press programs and log files

Can be ordered as accessories

System components

Possible combinations of kit and motor, depending on mounting position

Optionally pre-assembled

The electric cylinder, axial and parallel kit and servo motor are assembled in one application-specific module. This reduces the number of individual components to be managed. This module can be directly integrated in the system thanks to defined mechanical and electrical interfaces. After completion, a full performance test is performed. There is thus no need for the customer to carry out any assembly process.

With axial kit

Possible attachment variants

- [1] Front
- [2] Rear
- [3] Left
- [4] Right

With parallel kit

Advanced software package

The software package with selected functions makes it possible to adapt the servo press kit even more specifically to the application and the specific task, such as:

- Force control
- Step function with comparison operations
- OPC-UA connection

Part no. 8082745 Type GSAY-A4-F0-Z4-L-Y1

Available to purchase via the App World.

Visualisation		At the customer's premises via a web browser					
Mounting position		Any					

1) Applications in combination with tensile forces on request

2) Caused by tool weight, for example

3) Related to the calibration range of the force sensor and/or the force measurement range of the software for the complete system. Example for YJKP with a force range of 0.8 kN: 0.25% x 1200 N

Technical data – Force sensor							
Force range up to	[kN]	0.8	1.5	4	7	12	17
Force measuring range of software	[kN]	–0.2 ... 1	–0.2 ... 2	–0.5 ... 4.5	–0.5 ... 7.5	–1 ... 13	–1 ... 18
Max. overload	[kN]	1.5	3.75	11.25	15	30	37.5
Analogue output	[mA]	4 ... 20					

**Note**

The accuracy of the force measurement is influenced by the following properties of the force sensor:

- Accuracy
- Calibration range
- Nominal signal range
- Overload range

Transverse loads on the force sensor should be avoided as they may lead to false measurement results or damage the sensor.

Data sheet

Service life

The service life of the servo press kit depends to a large extent on the lead screw of the cylinder.

To ensure that the balls of the ball screw drive can reliably realign, a stroke of at least 12.5 mm must be carried out at regular intervals (typically during the retracting phase, ideally after each pressing process).

The service life ends after 10 million switching cycles or when the maximum running performance (L) has been reached.

The specifications for running performance (L) are based on experimentally determined and theoretically calculated data (at room temperature).

The running performance that can be achieved in practice can deviate considerably from the specified curves under different parameters (e.g. dirt, temperature).

Calculation of the mean feed force F_{xm}

$$F_{xm} = \sqrt[3]{\frac{F_{x1}^3 \cdot s_1 + \dots + F_n^3 \cdot s_n}{s_1 + \dots + s_n}}$$

F_{xm} = Mean feed force

$F_{x1/n}$ = Feed force of section

$s_{1/n}$ = Part of movement cycle that is travel

Mean feed force F_{xm} as a function of running performance L and room temperature

Force range up to 0.8/1.5/4

- Force range up to 0.8 kN
- Force range up to 1.5 kN
- - - Force range up to 4 kN

Force range up to 7/12/17

- Force range up to 7 kN
- Force range up to 12 kN
- - - Force range up to 17 kN

1) Corrosion resistance class CRC 3 to Festo standard FN 940070

High corrosion stress. Outdoor exposure under moderate corrosive conditions. Externally visible parts with primarily functional surface requirements which are in direct contact with a normal industrial environment.

Clamping element EADT

Material:

Plastic

RoHS-compliant

In conjunction with parallel kits, for setting the toothed belt pretension for force ranges 4, 7, 12 and 17 kN.

High toothed belt pretension forces can be generated with low torques at the clamping element.
