

## Mini slides DGSL

**FESTO**

Festo Core Range  
Solves the majority of your automation tasks

Worldwide: Quickest delivery – wherever, whenever  
Simply good: Expected high Festo quality  
Fast: Easy and fast to select

With the Festo Core Range, we have selected the most important products and functions from our broad product catalogue, and added the quickest delivery.

The Core Range offers you the best value for your automation tasks.

Just look  
for the  
star!

## Key features

### General

- Double-acting drives
- Wide range of mounting options
- System product for handling and assembly technology
- Highly flexible thanks to versatile assembly and mounting options on:
  - Drive body, slide, yoke plate

### The technology in detail

#### [1] Cushioning

- Choice of five cushioning types:
  - Elastic cushioning without metal end position (P)
  - Elastic cushioning without metal end position, short design (E)
  - Elastic cushioning with metal end position (P1)
  - Shock absorber (Y3)
  - Shock absorber with reducing sleeve (Y11)
- Alternative:
  - Without cushioning (N)

#### [2] Cover

→ Page 47

- The cover stops foreign parts or dirt getting into the guide
- The cover comes in different lengths and can be shortened as required by the customer

#### [3] Coarse stroke adjustment

→ Page 10

- The end stop for the advanced end position can be adjusted mechanically, for example to shorten the stroke

#### [4] Clamping unit

→ Page 40

- Mechanical clamping for fixing the slide in any position; frictional locking (C)

#### [4] End-position locking

→ Page 40

- Mechanical locking when the end position is reached, for fixing the slide in the unpressurised, retracted state; positive locking (E3)

#### [5] Innovative guide unit

- Wide roller track, providing extremely high rigidity
- High load capacity
- High precision
- Housing and steel slide form a guide, there are no accumulative tolerances

#### [6] Position sensing

- Proximity switches can be integrated, so there are no projecting parts
- Two slots for mounting
- Clearly visible from the side and from above

#### [7] Supply ports

- Choice of two sides:
  - On the front
  - On the side

## System example

## The technology in detail

Intermediate-position module

→ Page 48

The intermediate-position module enables an additional adjustable position within the stroke range.

- [1] Shock absorber retainer  
[2] Intermediate-position module

- The symmetrical design means that the intermediate position can be approached when advancing or retracting, depending on the assembly
- Can be travelled through from the end position
- Possible to continue on directly from the intermediate position
- Easy to assemble
- Sensing of the stop lever position possible

## System product for handling and assembly technology

## System components and accessories

	Description	→ Page/Internet
[1] Drives	Wide range of combinations possible within handling and assembly technology	drive
[2] Grippers	Wide range of variations possible within handling and assembly technology	gripper
[3] Adapters	For drive/drive connections	54
	For drive/gripper connections	adapter kit
[4] Basic components	Profiles and profile connections as well as profile/drive connections	basic component
[5] Installation components	For a clear, safe layout of electrical cables and tubing	installation component
- Axes	Wide range of combinations possible within handling and assembly technology	axis
- Motors	Servo and stepper motors, with or without gearbox	motor

Peripherals overview

**Note**  
 Operation without cushioning components is not permitted.

Accessories	Description	→ Page/Internet
[1] Cover DADS	<ul style="list-style-type: none"> <li>For protection, to stop foreign parts or dirt getting into the guide</li> <li>The cover can be shortened as required by the customer</li> </ul>	47
[2] Shock absorber retainer DADP	<ul style="list-style-type: none"> <li>Attachment for the shock absorber</li> <li>For positioning and cushioning the intermediate position</li> </ul>	50
[3] Intermediate-position module DADM	With stop lever for the intermediate position	48
[4] Centring sleeve ZBH	For centring loads and attachments (centring sleeves are included in the scope of delivery of the mini slide)	52
[5] Proximity switch SME/SMT-10	For position sensing. Can be integrated in the sensor slot, which means there is no projection	53
[6] Push-in fitting QSM	For connecting tubing with standard O.D.	52
[7] One-way flow control valve GRLA	For regulating speed	52
[8] Cushioning E	<ul style="list-style-type: none"> <li>Elastic stop for medium loads at medium speed</li> </ul>	51
[9] Cushioning P	<ul style="list-style-type: none"> <li>Elastic stop for medium loads at medium speed</li> </ul>	51
[10] Cushioning with stop P1	Precision metal stop for small loads at low speed	51
[11] Reducing sleeve DAYH	For installing a smaller shock absorber. For applications in which the cushioning energy is between cushioning Y3 and P1	51
[12] Shock absorber DYSW	→ Page (shock absorber selection)	51
[13] Cushioning with shock absorber Y3	For large loads and high speed. Ensures precise, metal-to-metal contact after the cushioning	51

1) Centring sleeves ZBH are included in the scope of delivery of the mini slide DGSL

2) Connector sleeves ZBV → page 52

## Data sheet

### Parallelism [mm]

The term parallelism refers to the accuracy of alignment between the mounting surface and the slide surface.

Size	Stroke [mm]	4	6	8	10	12	16	20	25
Parallelism X	10	0.02	0.02	0.02	0.02	0.02	0.02	0.02	0.02
	20	0.02	0.02	0.02	0.02	0.025	0.025	0.025	0.025
	30	0.025	0.025	0.025	0.025	0.025	0.025	0.025	0.03
	40	-	0.025	0.025	0.025	0.025	0.03	0.03	0.035
	50	-	0.03	0.03	0.03	0.03	0.035	0.035	0.04
	80	-	-	0.035	0.035	0.035	0.04	0.04	0.045
	100	-	-	-	0.045	0.045	0.05	0.05	0.055
	150	-	-	-	-	-	0.075	0.075	0.08
200	-	-	-	-	-	-	-	0.08	

### Linearity [mm]

The term linearity refers to the accuracy of alignment between the mounting surface and the slide surface as a function of the stroke.

Linear travel accuracy y as a function of stroke length l

## Data sheet

### Adjustable end-position range

Coarse adjustment of the advanced end position

With the mini slide DGSL, the advanced fixed stop can be relocated by swapping it with the cover.

This permits a stroke reduction down to the next but one smaller standard stroke through a combination of coarse and precision adjustments.

Advantages:

- Can be flexibly adapted to the application
- Integrated, which means reduced conversion effort and costs
- Large setting range

#### Note

Removal of the fixed stops can severely damage the mini slide DGSL.

Size Stroke [mm]	4		6		8		10		12		16		20		25	
	L6	L7	L6	L7	L6	L7	L6	L7	L6	L7	L6	L7	L6	L7	L6	L7
10	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
20	10	-	14	-	10	-	-	-	-	-	-	-	-	-	-	-
30	10	-	14	-	16	-	-	-	-	-	-	-	-	-	-	-
40	-	-	14	-	16	-	-	-	-	-	-	-	-	-	-	-
50	-	-	14	14	16	-	-	-	-	-	-	-	-	-	-	-
80	-	-	-	-	16	16	24	-	29	-	35	-	-	-	55	-
100	-	-	-	-	-	-	24	24	29	-	35	-	44	-	55	-
150	-	-	-	-	-	-	-	-	29	29	35	-	44	-	55	-
200	-	-	-	-	-	-	-	-	-	-	-	-	44	44	55	-

#### Example:

DGSL-12-150-...

Max. stroke = 150 mm

By relocating the fixed stop  
by dimension L6:

Stroke = 150 - 29 = 121 mm

By relocating the fixed stop  
by dimension L6 and L7:

Stroke = 150 - 29 - 29 = 92 mm

The stroke can also be reduced  
through a precision adjustment:

Stroke = 150 - 29 - 29 - 29  
= 63 mm

Precision adjustment of the advanced  
and retracted end position

→ page 11

## Data sheet

### Adjustable end-position range

Precision adjustment of the advanced and retracted end position

Precision adjustment of the required stroke reduction is possible using the cushioning components (on the slide and in the end cap).

Advantages:

- Precision adjustment is accurately fixed by the clamping component
- No readjustment required, position is fully retained under lock and load
- Quick and easy adjustment, only one tool required

Step 1:  
Loosen the clamping component

Step 2:  
Position the slide by hand in the required end position

Step 3:  
Turn the stop element with an Allen key until the end position is reached.

Step 4:  
Tighten the clamping component

Step 1

Step 2 ... 4

Adjustable end-position range [mm] per end position/stroke reduction		4	6	8	10	12	16	20	25
Front end position									
With cushioning	P	-14.5	-16.5	-19.5	-27.5	-29	-37.5	-50.5	-55
	E	-4.5	-5	-4.5	-13	-9	-3.5	-6.5	-11.5
	P1	-14.5	-16.5	-19.5	-27.5	-29	-37.5	-50.5	-55
	Y3	-	-	-15	-24	-29	-36.5	-44	-56
	1)	-	-	-	-24	-29	-36.5	-44	-56
Rear end position									
With cushioning	P	-13.5	-15	-18.5	-20	-25.5	-39.5	-49.5	-49
	E	-3.5	-3.5	-3.5	-5.5	-5.5	-5.5	-5.5	-5.5
	P1	-13.5	-15	-18.5	-20	-25.5	-39.5	-49.5	-49
	Y3	-	-	-14	-15	-25.5	-38.5	-42	-51.5
	1)	-	-	-	-15	-25.5	-38.5	-42	-51.5

1) With reducing sleeve and next smaller shock absorber.

**Note**  
The distance L of the cushioning component (→ operating instructions) are not permitted to fall below (factory setting).

**Note**  
The setting range of the advanced and retracted end position is restricted when using the cushioning type "E".

## Data sheet

### Shock absorber selection

Payload load  $m$  as a function of impact velocity  $v$

With the mini slide DGSL, shock absorbers can be replaced and the cushioning behaviour can thus be influenced (depending on the payload).

This is done by removing the existing shock absorbers on the DGSL and replacing them with a smaller shock absorber as appropriate to the application.  
(→ description below)

Graphs for selecting a suitable shock absorber as a function of the mounting position of the mini slide  
→ from page 13

Ordering data  
Shock absorbers DYSW, DYEY and reducing sleeve DAYH  
→ Page 51

#### For smaller loads:

The next smaller shock absorber DYSW can be installed with the help of the reducing sleeve DAYH.

#### For very small loads:

The shock absorber DYEY can be installed.

#### Selection example:

Current drive:

Mini slide: DGSL-10-...-Y3-A

Assuming:

Payload: 500 g

Impact velocity: 0.4 m/s

Mounting position: horizontal

- ..... DYSW-5-8 (cushioning Y3)
- DYSW-4-6 with DAYH-4 (cushioning Y11)
- DYEY-M8-Y1F

Result:

The first cushioning curve, which is located above the point of intersection, is the most suitable for this case.

Due to the low payload of less than one kilogram, the cushioning characteristics are greatly improved by replacing the shock absorber DYSW-5-8 integrated in the mini slide with the reducing sleeve DAYH-4 and the next smaller shock absorber DYSW-4-6.

Fundamentally, shock absorbers must be loaded.

Since the shock absorber DYSW-4-6 is more fully utilised in this case, both the service life of the shock absorber and the cushioning characteristics are improved.

#### Vertical mounting position

The travel times for a vertical mounting position are calculated by multiplying the data for a horizontal mounting position by a correction factor  $k_a$  (advancing) and  $k_r$  (retracting), see adjacent table.

Assuming:  
Stroke = 200 mm  
Size = 20  
Payload = 3 kg  
Calculated travel time  $t_h$  (horizontal),  
see graph:

- Advancing = 500 ms
- Retracting = 600 ms

Calculated travel time  $t_v$  (vertical):

- Advancing:  $t_v = t_h \times k_a$   
 $t_s = 500 \text{ ms} \times 0.9 = 450 \text{ ms}$
- Retracting:  $t_v = t_h \times k_r$   
 $t_s = 600 \text{ ms} \times 1.1 = 660 \text{ ms}$

Stroke [mm]	Size	Advancing ( $k_a$ ) <sup>1)</sup>	Retracting ( $k_r$ )

## Data sheet

### Dynamic characteristic load values

The indicated torques refer to the centre of the guide.  
 These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

If the drive is simultaneously subjected to several of the forces and torques indicated below, the following equation must be satisfied in addition to the indicated maximum loads:

$$\frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} + \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} \leq 1$$

### Position of the guide centre

### Calculation example

Assuming:

Mini slide = DGSL-10  
 Stroke length = 80 mm  
 Lever arm  $L_x$  = 50 mm  
 Lever arm  $L_y$  = 30 mm  
 Load  $F_z$  = 0.8 kg  
 Acceleration  $a$  = 0 m/s<sup>2</sup>

Required:

$F_y, F_z, M_x, M_y, M_z$   
 and  
 Verification of operation with combined load

Solution:

$L_{21} = 83$  mm from table

$F_y = 0$  N

$F_z = m \times g$   
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 = 7.848$  N

$M_x = m \times g \times L_y$   
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 \times 30 \text{ mm} = 0.236$  Nm

$M_y = m \times g \times [(L_{21} + \text{stroke}) - L_x]$   
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 \times [(83 \text{ mm} + 80 \text{ mm}) - 50 \text{ mm}] = 0.886$  Nm

$M_z = 0$  Nm

Combined load:

$$\frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} + \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} \leq 1$$

$$0 + \frac{7.848 \text{ N}}{1200 \text{ N}} + \frac{0.236 \text{ Nm}}{18 \text{ Nm}} + \frac{0.886 \text{ Nm}}{12 \text{ Nm}} + 0 \leq 1$$

Function  
C – Clamping unit

Size  
6 ... 25

Sets of wearing parts  
→ Page 45

E3 – End-position locking

**Note**

If used in safety-relevant applications, additional measures are necessary, e.g. in Europe the standards listed in the EC Machinery Directive must be observed. Without additional measures in accordance with legally specified minimum requirements, the product is not suitable as a safety-related component in control systems.

General technical data – Clamping unit							
Size	6	8	10	12	16	20	25
Function	<ul style="list-style-type: none"> <li>Mechanical clamping</li> <li>For fixing the slide in any position</li> <li>Frictional locking</li> </ul>						
Type of clamping with effective direction	At both ends Clamping via spring force, compressed air to release						
Pneumatic connection	M5						
Mounting position	Any						
Static holding force [N]	80	80	180	180	350	350	600
Product weight [g]	10	10	15	15	50	50	50

Operating and environmental conditions – Clamping unit	
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]
Note on the operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)
Min. release pressure	
	[MPa] 0.3
	[bar] 3
Max. operating pressure	
	[MPa] ≤ 1
	[bar] ≤ 10

General technical data – End-position locking							
Size	6	8	10	12	16	20	25
Function	<ul style="list-style-type: none"> <li>Mechanical locking when the end position is reached</li> <li>For fixing the slide in the unpressurised, retracted state</li> <li>Form-fitting</li> </ul>						
Type of clamping with effective direction	At both ends Clamping via spring force, unlocked via compressed air						
Pneumatic connection	M5						
Mounting position	Any						
Static holding force [N]	60	60	160	160	250	380	640
Product weight [g]	13	13	26	26	64	64	65

Operating and environmental conditions – End-position locking	
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]
Note on the operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure	
	[MPa] 0.3 ... 0.8
	[bar] 3 ... 8

## Data sheet

### Adjustable end-position range

When using end-position locking (E3), the adjustable end-position range, the retracted end position, is reduced by the following values.

Size	[3]
6, 8	Max. 1.5 mm
10, 12	Max. 2.3 mm
16, 20, 25	Max. 2.7 mm

- [1] Axial setting range
- [2] Max. cushioning stroke
- [3] Adjustable end-position range

 **Note**  
With the 500 mm covers, the mounting hole must be made by the customer.  
The cover can be shortened as required by the customer.

## Accessories

### Intermediate-position module DADM

- The intermediate-position module enables an additional adjustable position within the stroke range. The module is mounted separately, directly next to the mini slide. It can be mounted anywhere along the mini slide.
- The associated shock absorber retainer → page 50 can be attached at several points on the slide. The position can be precisely set with the help of the shock absorber.
- The stop lever positions can be sensed using proximity switches SME/SMT → page 53
- Push-in fittings are not included in the scope of delivery

Material:  
Housing:  
Wrought aluminium alloy  
Lever:  
High-alloy stainless steel  
RoHS-compliant

## Mounting

To ensure that the shock absorber strikes the stop lever centrally, we recommend mounting the intermediate-position module directly next to the mini slide (without a gap). It is fastened on the mounting surface using 2 screws and centring sleeves.

The shock absorber retainer is then attached to the slide of the mini slide, likewise using 2 screws and centring sleeves.

## Precision adjustment:

The required stroke reduction can be precisely adjusted using the screw-in depth of the shock absorber. The shock absorber must protrude by at least 1.5 mm.

Accessories

1) Packaging unit

**Note**

- A shock absorber retainer DADP-ES is additionally required when using an intermediate-position module
- Operation without cushioning components is not permitted
- Cushioning components are not included in the scope of delivery
- The shock absorbers for the mini slides and for the relevant shock absorber retainer are of identical size. Shock absorber selection → page 51
- The same cushioning component as is used in the end positions of the mini slide is used for cushioning the intermediate position

- 1) Corrosion resistance class CRC 2 to Festo standard FN 940070  
Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.
- 2) Packaging unit.
- 3) The screws listed are not included in the scope of delivery of the drives.
- 4) The centring sleeves are included in the scope of delivery of the drives.

## Accessories

Adapter kit  
HAPS, HMSV

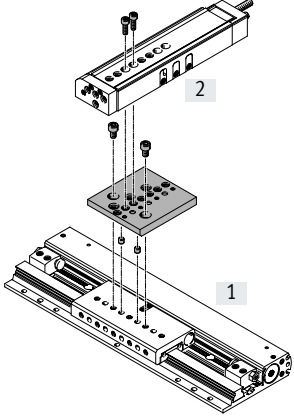

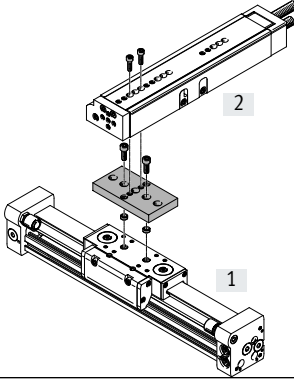

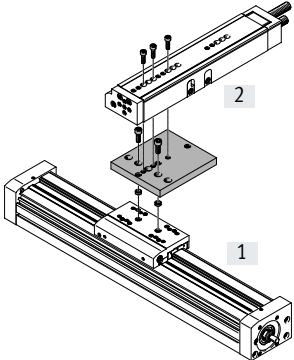

Material:  
Wrought aluminium alloy  
Free of copper and PTFE  
RoHS-compliant

**Note**

The kit includes the individual mounting interface as well as the necessary mounting material.
