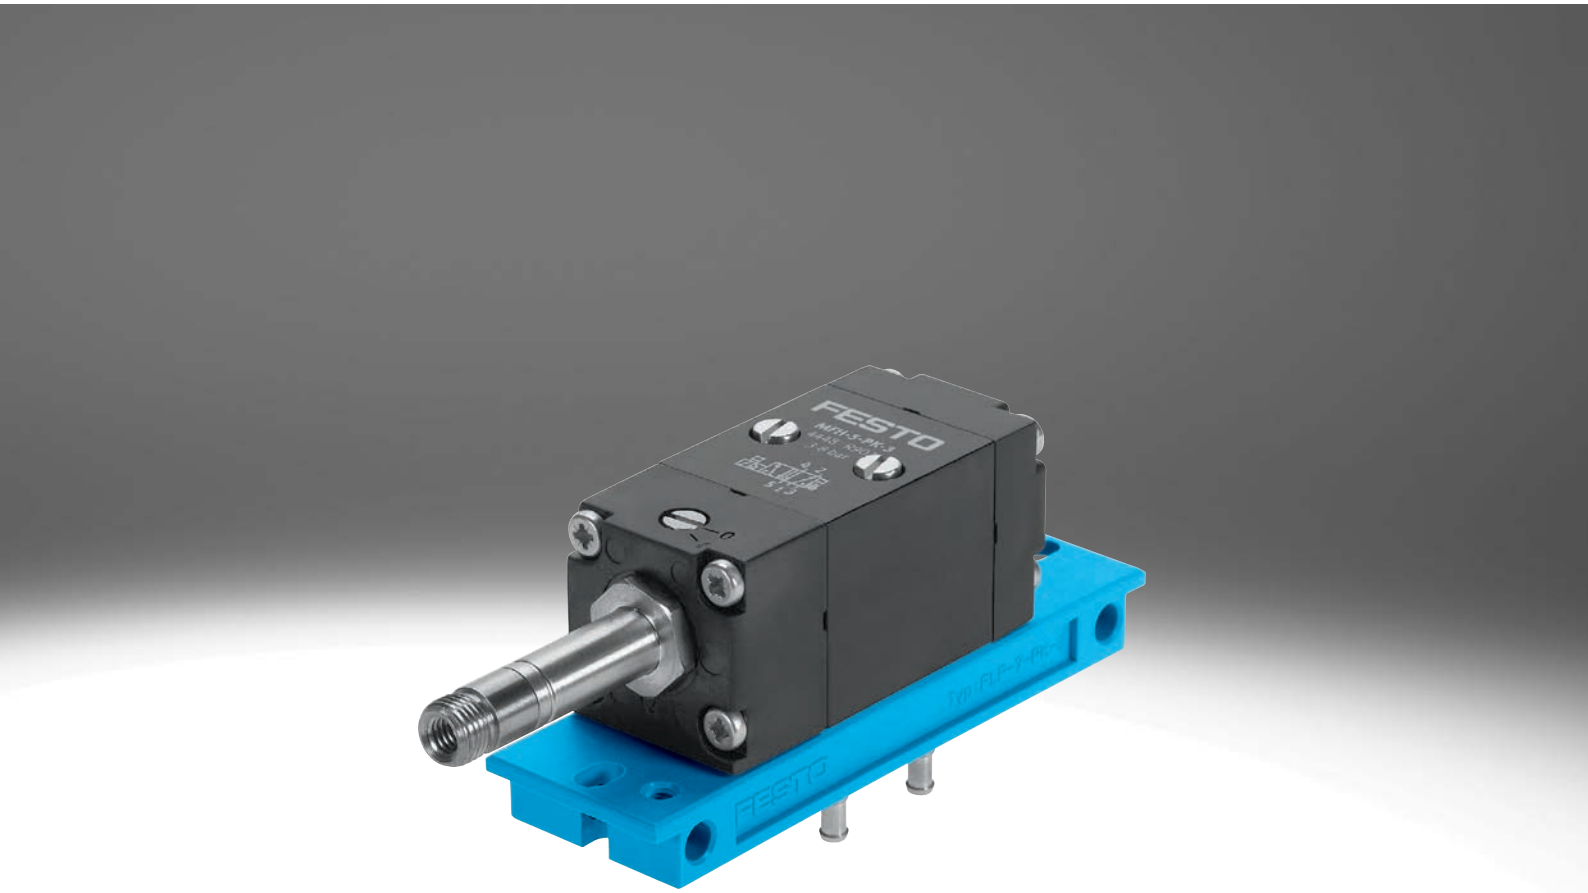
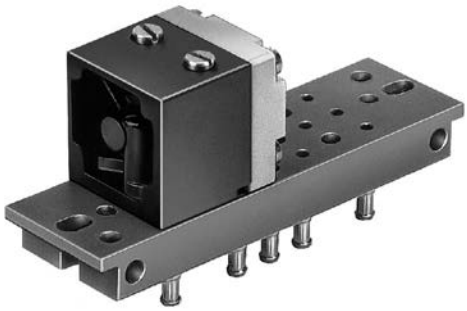
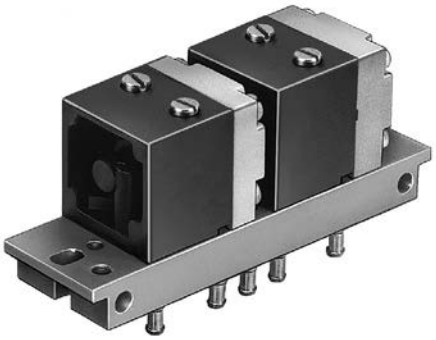
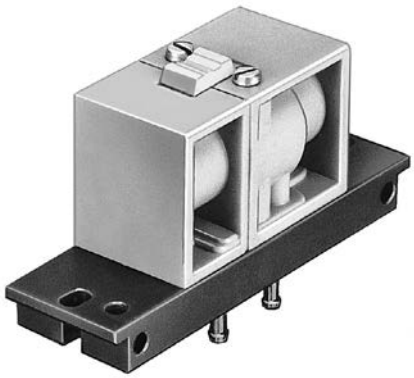
M5 compact system



Key features







- Flow rate
  100 l/min

- Basis for compact pneumatic control systems
- M5 components with 2n sub-bases
- Control cabinet installation
- Easy to mount
- Fast replacement of components
- Barbed connection for plastic tubing NW 3

The M5 compact system is a complete system offering control components with all the functions required for pneumatic sequence control. It is based on the sub-bases 2n and barbed connections for tubing NW 3.

Basic valves and actuator attachments for front-panel mounting as signal elements for basic functions START, STOP etc.

→ Internet: sv

Mounting the components

A maximum of 16 components of the M5 compact system with 2N sub-bases can be mounted on the mounting frame. At 480 mm, the length of the frame is designed for 19" housing to DIN 41 488. The strips can be shortened to adapt them to other installation conditions.

During mounting, the sub-bases or mounting plates of the components are slid into the guide slot of the profile strips. These are then firmly clamped between the connecting components.

Datasheet

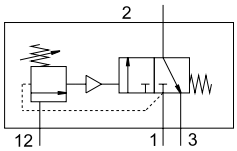
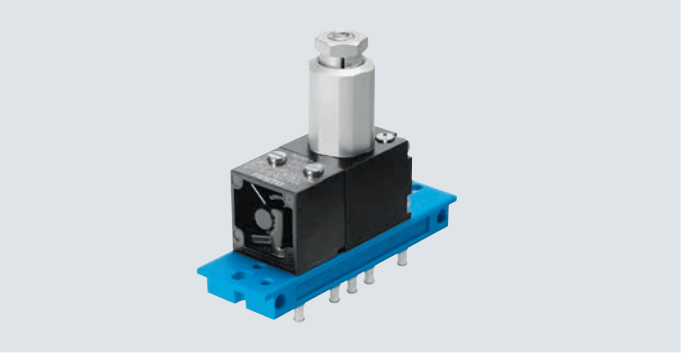
VZ, with switch-on delay



- Flow rate
  100 l/min
- Temperature range
  –10 ... +60 °C
- Operating pressure
  0.18 ... 0.8 MPa



The pressure sequence valve is used when a pressure-dependent signal is required to switch a control system to the next step, e.g. if a minimum control pressure for the cylinders is reached.

The pressure is set at the adjusting screw.
As soon as the control signal has reached the set pressure, the attached 3/2-way valve is actuated.

Conversely, the valve switches back when the control signal falls below the set pressure.

Datasheet

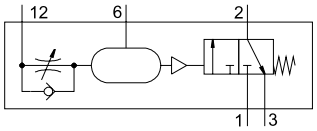
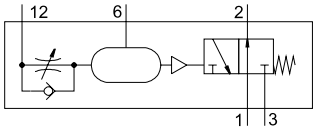
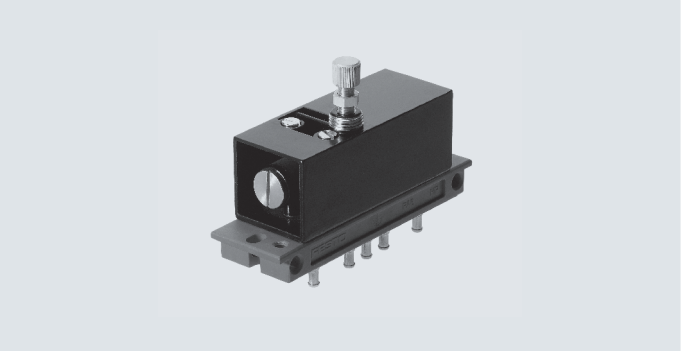
VZ, with switch-on delay



VZO, with switch-off delay



- Flow rate
  60 ... 90 l/min
- Temperature range
  –10 ... +60 °C
- Operating pressure
  2.5 ... 8 bar



The time delay valve consists of a pneumatically actuated 3-way valve and an upstream flow control valve with additional volume.

The delay in the valve actuation is dependent on the setting of the flow control valve.

It is reset via a mechanical spring.

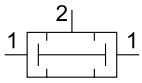
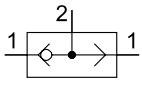
AND gate ZK



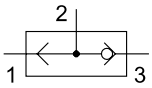
OR gate OS

OS-PK-3

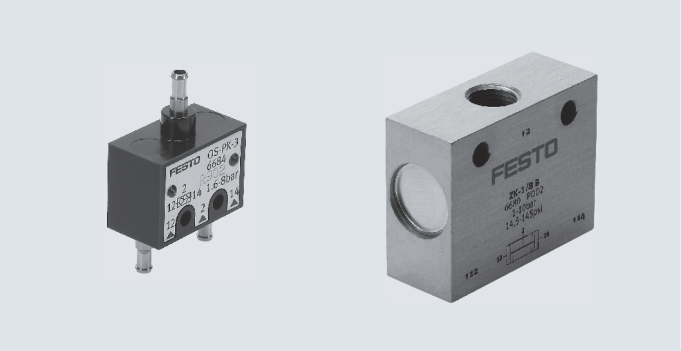
OS-1/8 / 1/4-B



OS-1/2



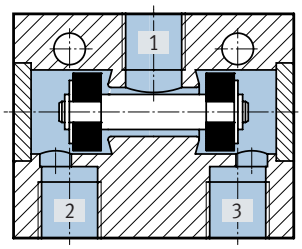
- Flow rate
  120 ... 5000 l/min
- Temperature range
  –10 ... +60 °C
- Operating pressure
  1 ... 10 bar



Valve function

AND function

For an AND gate, all input signals must be active at the same time in order to execute a function.
The AND gate ZK has two inputs [2], [3] and one output [1]. Output [1] is only pressurised if pressure is supplied to both inputs at the same time. If different pressures are present at the inputs, the lower pressure is fed to the output [1].



OR function

For an OR gate, at least one of all the input signals must be active in order to execute a function.
The OR gate OS has two inputs [2], [3] and one output [1]. Output [1] is pressurised if pressure is supplied to at least one of the two inputs. The valve automatically blocks the input which is not pressurised. If both inputs are simultaneously supplied with different pressures, the higher pressure is fed to the output [1].

Key features

Adding counter

- Base mounting
- Front panel mounting

Adding counters have 6 digits and count upwards, i.e. the relevant signals are added. If it is reset, the number 000 000 appears.
A pneumatic signal switches the counter by half a step, so the first half of the number is visible. At the end of the signal, with the 2nd half-step, the number is completely visible.
The counter can be reset manually by pressing a button. It can also be reset pneumatically using a compressed air signal. While it is being reset, no counting signal can be received or be present.

Preset counter

- Subtraction counting mode
- Manual and pneumatic reset
- Protective cap

The counter counts pneumatic signals backwards from a preset number. Once the zero position is reached, the counter gives a pneumatic output signal. This output signal remains until the counter is reset.
The counter is preset by pressing the reset button and entering the preset value at the same time. Once the number has been preset, it is retained for future resetting of the counter.

Datasheet

General technical data				
Type		Adding counter		Preset counter
		PZA-A-B	PZA-E-C	PZV-E-C
Design		Mechanical counter with pneumatic drive

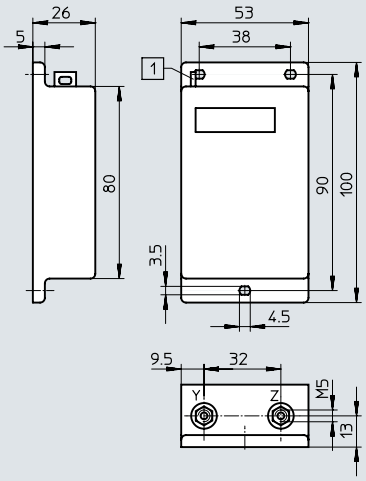
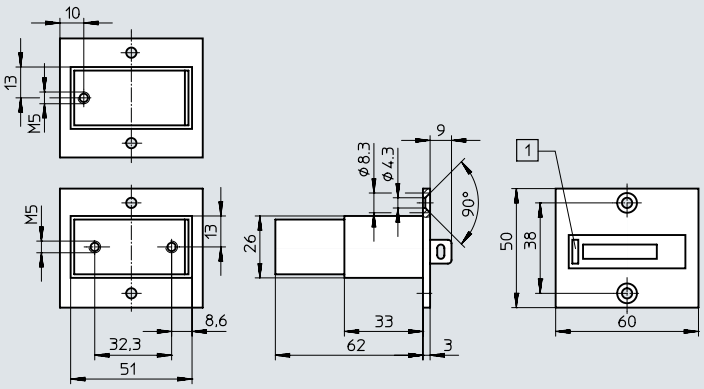
Adding counters – Base mounting PZA-A-B



[1] Reset button

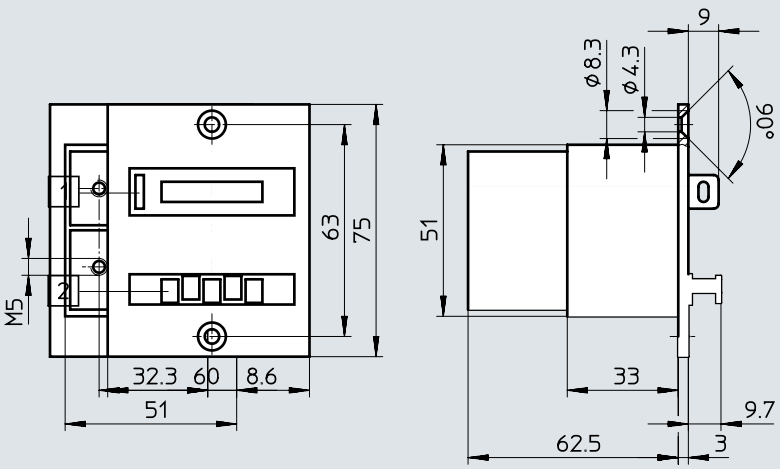
Z = Count signal
Y = Reset signal

Adding counters – Front panel mounting PZA-E-C



[1] Reset button

Preset counters – Base mounting PZV-E-C



[1] Reset button
[2] Presetting buttons

The preset number is reset once again using the reset button or via a pneumatic signal at the reset connection.

Note: The output signal must not be used to reset the counter. During the resetting process, no count pulses can be received or be present.

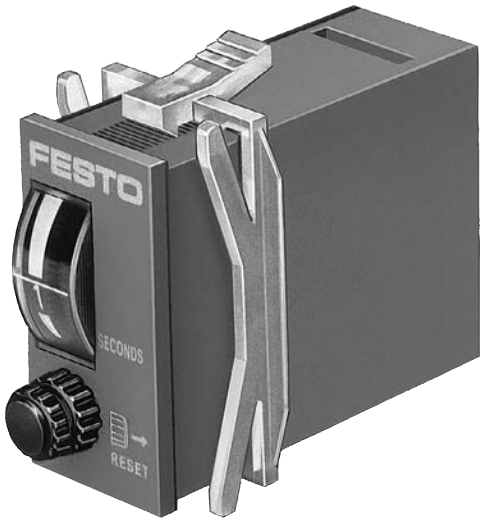
Key features



General

- Adjustable delay time
  - 0.2 ... 3 s
  - 2 ... 30 s
  - 8 ... 120 s
  - 20 ... 300 s
- Front panel mounting
- H rail mounting to EN 60715
- Protective cap

Pneumatic timer PZVT

The timer switches the input pressure applied to connection 1 to connection 2 after the set time delay has expired.

Automatic reset module PZVT-AUT

The reset module is used to automatically reset timers of type PZVT-...-SEC once the preset time has expired and to generate an output signal of a specific length for control purposes.

The timer can be reset manually by pulling the adjusting knob on the reset module. This makes it very easy to implement pneumatic time control processes with automatically repeating time intervals.

Datasheet

General technical data

Type		Timer				Reset module
		PZVT-3-SEC	PZVT-30-SEC	PZVT-120-SEC	PZVT-300-SEC	PZVT-AUT
Design		Mechanical sequence counter with pneumatic drive
