

- Precise and rigid guide
- Highly flexible
- Adjustable end-position cushioning

Mini slides SLT/SLS/SLF

Key features

General information

- Double-acting drives
- Precise and rigid guide
- Versatile air connections
- Sensors can be integrated
- Highly flexible thanks to versatile, direct assembly and connection options on:
 - Drive body
 - Slide
 - Yoke plate

Mini slides SLT

- Powerful
- Compact design through air connections at rear
- Two adjustable end-position cushioning systems:
 - Flexible cushioning elements
 - Hydraulic shock absorbers
- Extremely compact drive thanks to cushioning systems integrated in the profile section
- Versatile combination options include:
 - Drives
 - Grippers
- System product for handling and assembly technology

Mini slides SLS

- Slim design
- Integrated end-position cushioning:
 - Flexible cushioning elements

Mini slides SLF

- Flat
- Adjustable end-position cushioning
 - Flexible cushioning elements
- Versatile combination options on:
 - Drives
- System product for handling and assembly technology

Mini slides SLT/SLS/SLF

System example

System product for handling and assembly technology

System elements and accessories			
	Brief description	→ Page	
1	Drives	Diverse possible combinations in handling and assembly technology	Volume 1
2	Grippers	Wide range of variation options within handling and assembly technology	Volume 1
3	Adapters	For drive/drive and drive/gripper combinations	Volume 5
4	Basic components	Profiles and profile connections as well as profile/drive connections	Volume 5
5	Installation components	For achieving a clear-cut, safe layout of electrical cables and tubing	Volume 5
-	Axes	Diverse possible combinations in handling and assembly technology	Volume 5
-	Motors	Servo and stepper motors, with or without gearing	Volume 5

Mini slides SLT/SLS/SLF

Key features

Drive

Mini slides SLT/SLS/SLF are driven with double-acting cylinders.

SLT: with two pistons

SLS/SLF: with one piston

Guide

The slide moves on a pre-loaded, backlash-free precision ball bearing cage guide of high rigidity with high torque and load absorption.

SLT-/SLS-/SLF-6/-10/-16

SLT-20/-25

The powerful mini slide

SLT

Piston Ø Width (W) x Height (H)

2x 6 mm	35	x	20 mm
2x 10 mm	50	x	30 mm

Mini slides SLT/SLS/SLF

Key features

Versatile

through

- Attachment
- Mounting
- Air connection
- End-position cushioning
- Sensors

1 Attachment:
The drive can be directly attached via through or threaded holes (with appropriate screws and centring sleeves ZBH).

2 Mounting surface:
Direct attachment of devices and loads is made possible with threaded holes in the slide and the yoke plate (using appropriate screws and centring sleeves ZBS/ZBH) (e.g. SLT: semi-rotary drives and grippers).

3 Versatile air connections

4 Adjustable end-position cushioning systems:
 1) SLT-...-P-A/SLF-...-P-A with flexible cushioning elements in the end positions
 2) SLT-...-P-A with stop PF-...-SLT allows precise, metallic positioning in the end positions
 3) SLT-...-A-CC-B with hydraulic shock absorbers YSRT on rear cover for optimum end-position adjustment

5 Sensors can be integrated
Sensor slots for one or more proximity sensors SME/SMT-10. For space-saving, reliable sensing of piston positions. Proximity sensors can be freely moved and clamped in their slots.

Materials

Sectional view

Mini slide		
1	Piston rod	High-alloy steel
2	Cap	Wrought aluminium alloy, anodised
3	Housing	Wrought aluminium alloy, anodised
4	Slide	Wrought aluminium alloy, anodised
5	Guide	Tempered steel
-	Seals	Hydrogenated nitrile rubber
Note on materials		Free of copper, PTFE and silicone

Piston speed v as a function of working load m

The piston speed as a function of working load may not be exceeded as the kinetic impact or residual energy in the end positions can result in damage to the drive. For the mini slide SLT with shock absorbers, the speed should not be less than 0.1 m/s, as otherwise the service life of the shock absorber will be reduced.

Mini slides SLT

Technical data

Dynamic characteristic load values

Torques are indicated with reference to the centre of the guide. They must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

If the drive is simultaneously subjected to several of the indicated forces and torques, the following equation must be satisfied in addition to the indicated maximum loads.

$$\frac{|F_{y1}|}{F_{y\max.}} + \frac{|F_{z1}|}{F_{z\max.}} + \frac{|M_{x1}|}{M_{x\max.}} + \frac{|M_{y1}|}{M_{y\max.}} + \frac{|M_{z1}|}{M_{z\max.}} \leq 1$$

Position of guide centre

+ plus stroke length

Calculation example

Given:

Mini slide = SLT-10
 Stroke length = 80 mm
 Lever arm L_x = 50 mm
 Lever arm L_y = 30 mm
 Mass F_z = 0.8 kg
 Acceleration a = 0 m/s²

To be found:

F_y , F_z , M_x , M_y , M_z
 and
 verification of function with combined load

Solution:

$L_{21} = 41$ mm from table

$F_y = 0$ N

$F_z = m \times g$
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 = 7.848$ N

$M_x = m \times g \times L_y$
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 \times 30 \text{ mm} = 0.236$ Nm

$M_y = m \times g \times [(L_{21} + \text{stroke}) - L_x]$
 $= 0.8 \text{ kg} \times 9.81 \text{ m/s}^2 [(41 \text{ mm} + 80 \text{ mm}) - 50 \text{ mm}] = 0.557$ Nm

$M_z = 0$ Nm

Combined load:

$$\frac{|F_{y1}|}{F_{y\max.}} + \frac{|F_{z1}|}{F_{z\max.}} + \frac{|M_{x1}|}{M_{x\max.}} + \frac{|M_{y1}|}{M_{y\max.}} + \frac{|M_{z1}|}{M_{z\max.}}$$

$$= 0 + \frac{7.848 \text{ N}}{41 \text{ N}} + \frac{0.2366 \text{ Nm}}{4.3 \text{ Nm}} + \frac{0.557 \text{ Nm}}{1.5 \text{ Nm}} + 0 = 0.445 \leq 1$$

Technical data

Piston speed v as a function of working load m

SLS-6/-10/-16...-P-A

The piston speed as a function of working load illustrated in this graph may not be exceeded as the kinetic impact or residual energy in the end positions can result in damage to the drive.

Dynamic characteristic load values

Torques are indicated with reference to the centre of the guide.

They must not be exceeded during dynamic operation. Special attention must be paid to the cushioning phase.

If the drive is simultaneously subjected to several of the indicated forces and torques, the following equation must be satisfied in addition to the indicated maximum loads.

$$\frac{|F_y|}{F_{y_{max}}} + \frac{|F_z|}{F_{z_{max}}} + \frac{|M_x|}{M_{x_{max}}} + \frac{|M_y|}{M_{y_{max}}} + \frac{|M_z|}{M_{z_{max}}} \leq 1$$

Calculation example

Given:

To be found:

Mini slide = SLS-10
 Stroke length = 20 mm
 Lever arm L_x = 5 mm
 Lever arm L_y = 20 mm
 Mass F_z = 0.495 kg
 Acceleration a = 0 m/s²

F_y, F_z, M_x, M_y, M_z
 and
 verification of function with combined load

Solution:

L21 = 36 mm from table

$$F_y = 0 \text{ N}$$

$$F_z = m \times g = 0.495 \text{ kg} \times 9.81 \text{ m/s}^2 = 4.856 \text{ N}$$

$$M_x = m \times g \times L_y = 0.495 \text{ kg} \times 9.81 \text{ m/s}^2 \times 20 \text{ mm} = 0.097 \text{ Nm}$$

$$M_y = m \times g \times [(L21 + \text{stroke}) - L_x] = 0.495 \text{ kg} \times 9.81 \text{ m/s}^2 [(36 \text{ mm} + 20 \text{ mm}) - 5 \text{ mm}] = 0.248 \text{ Nm}$$

$$M_z = 0 \text{ Nm}$$

Combined load:

$$\frac{|F_y|}{F_{y_{\max}}} + \frac{|F_z|}{F_{z_{\max}}} + \frac{|M_x|}{M_{x_{\max}}} + \frac{|M_y|}{M_{y_{\max}}} + \frac{|M_z|}{M_{z_{\max}}} = 0 + \frac{4.856 \text{ N}}{150 \text{ N}} + \frac{0.097 \text{ Nm}}{1.1 \text{ Nm}} + \frac{0.248 \text{ Nm}}{1.1 \text{ Nm}} + 0 = 0.345 \leq 1$$

Mini slide = SLF-10
 Stroke length = 20 mm
 Lever arm L_x = 5 mm
 Lever arm L_y = 20 mm
 Mass F_z = 0.495 kg
 Acceleration a = 0 m/s²

F_y, F_z, M_x, M_y, M_z
 and
 verification of function with combined
 load

Solution:

$L_{21} = 25$ mm from table

$F_y = 0$ N

$F_z = m \times g$
 $= 0.495 \text{ kg} \times 9.81 \text{ m/s}^2 = 4.856 \text{ N}$

$M_x = m \times g \times L_y$
 $= 0.495 \text{ kg} \times 9.81 \text{ m/s}^2 \times 20 \text{ mm} = 0.097 \text{ Nm}$

$M_y = m \times g \times [(L_{21} + \text{stroke}) - L_x]$
 $= 0.495 \text{ kg} \times 9.81 \text{ m/s}^2 [(25 \text{ mm} + 20 \text{ mm}) - 5 \text{ mm}] = 0.194 \text{ Nm}$

$M_z = 0$ Nm

Combined load:

$$\frac{|F_y|}{F_{y_{max}}} + \frac{|F_z|}{F_{z_{max}}} + \frac{|M_x|}{M_{x_{max}}} + \frac{|M_y|}{M_{y_{max}}} + \frac{|M_z|}{M_{z_{max}}}$$

$$= 0 + \frac{4.856 \text{ N}}{150 \text{ N}} + \frac{0.097 \text{ Nm}}{1.1 \text{ Nm}} + \frac{0.194 \text{ Nm}}{1.1 \text{ Nm}} + 0 = 0.297 \leq 1$$
