

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

- 1 - Type to be discontinued
Available until 2012

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

FESTO

Key features

Innovative

- Multi-functional valve terminal in sturdy metal housing
- Electrical interlinking module for flexible expansion options

Standardised system of electrical connections:

- Multi-pin plug
- All common fieldbuses
- Integrated controllers for pre-processing

Suitable for electrical peripherals type 03 and CPX, i.e.:

- Diagnostics down to the individual valve
- Parameterisable error characteristics
- Separate load voltage supply for valves
- On-site diagnostics via LEDs or handheld terminal CPX (MMI)

Versatile

- Modular system offering a range of configuration options
 - Expandable up to 26 solenoid coils and 12 I/O modules
 - Conversions and extensions possible at a later date
 - Simple replacement of valves and valve functions
 - High pressure range –0.9 ... 10 bar
 - Wide range of valve functions
 - Multiple pressure zones
- Vertical stacking modules:
- Pressure regulator
 - Flow control plates

Reliable

Sturdiness:

- Metal valve housing
- Metal I/O module housing
- Electrical connection technology
- Fast troubleshooting thanks to LEDs on the valves and diagnostics via fieldbus
- Reliability of service through replaceable valves
- Manual override either non-detenting, detenting or covered
- Flexible labelling system thanks to inscription labels

In combination with CPX:

- Module and channel-specific diagnostics
- Comprehensive diagnostics on-site without PC, only with CPX-MMI

Easy to mount

- Ready-to-install and tested unit
- Sturdy mounting and version for harsh environments
- Lower selection, ordering, assembly and commissioning costs
- Wall mounting or H-rail mounting

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

Key features

Valve terminals type 03

Valve terminals are the most comprehensive system in intelligent pneumatics.

The multi-functional Festo valve terminals for MIDI/MAXI valves have a sturdy, modular design and they can be equipped with different valve sizes. A valve terminal can also have multiple pressure zones and vacuum operation as well as integrated pressure regulators and one-way flow control valves. The valve terminals are

therefore capable of providing versatile and flexible solutions to a wide variety of pneumatic control technology requirements, and the high-quality metal/plastic design and protection to IP65 mean that they can be effective even in the harshest operating environments.

A worldwide service and consultation network round off the performance spectrum.

Multi-pin plug variants

Valve terminals with multi-pin plug connections can be connected in the normal way to the I/O cards of all current control systems or industrial PCs. The central control system

requires a powerful PLC with a correspondingly high number of I/O cards and must also be connected to the fieldbus devices with more complex parallel wiring.

Festo offers several installation-saving multiple connection nodes and the appropriate multi-pin cables.

Connection types

Multi-pin plug

Round multi-pin plug connection, sturdy version for up to 24 solenoid coils.

Double multi-pin plug

Double round multi-pin plug connection for connecting up to 6 digital input modules for sensors.

Sub-D multi-pin plug connection

Sub-D multi-pin plug connection with protection to IP65, low-cost and flat, for up to 22 solenoid coils.

Control block with electrical I/O modules

Integrated controller and fieldbus interface, I/O modules as with fieldbus connection. Decentralised CP systems can also be connected.

Fieldbus node with electrical I/O modules

Communication and diagnostics with all common bus systems:

- Up to 12 sturdy type 03 I/O modules can be assembled
- Connection technology to IP65 with M12 or Sub-D plugs
- Digital I/O modules
- Analogue I/O modules
- Multi-functional I/O modules
- 2 A outputs for hydraulic valves

- 1 - Type to be discontinued
Available until 2012

FESTO

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

Key features

User documentation – GSD, EDS, etc.

Device description files and icons are used to explain the integration of the valve terminal type 03 in the configuration software of the various controller manufacturers.

These can be downloaded quickly and conveniently from the download area of the Festo website.

➔ www.festo.com

Valve terminal configurator

Online via: ➔ www.festo.com/us/engineering

The appropriate type 03 valve terminal can be chosen quickly and easily using the online catalogue. This includes an easy-to-use valve terminal configurator, which makes it much easier to order the right product.

The valve terminals are fully assembled according to your order specification and are individually tested. This reduces assembly and installation time to a minimum.

You order a valve terminal type 03 using the order code.

Ordering system for electrical components

➔ Internet: type 03, type 04

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

Peripherals overview

Electrical components

Flexible connection to the controller thanks to an extensive range of connection nodes:

- Multi-pin plug connection
- Fieldbus connection
- DeviceNet direct interface

Stand-alone solutions with integrated PLC (control block) from:

- Festo
- Allen Bradley

Electrical digital inputs/outputs:

- Max. 12 modules in combination with suitable nodes (see ordering data)
- Inputs for 24 V DC sensors, PNP or NPN outputs for small consuming devices 24 V DC
- High-current outputs up to 2 A PNP/NPN, for example for hydraulic valves, can be connected directly to the valve terminal

Proportional pneumatics:

- Analogue modules optimised for proportional valves, for example for Festo MPYE and MPPEs for regulating the force of a cylinder
- To detect, control/regulate universal analogue variables (4 ... 20 mA or 0 ... 10 V) within the process – on-site to IP65

Optimising and expanding your application:

- Modules for installation-saving connection using sturdy Sub-D plugs to IP65
- Low-cost connections to input/output stations and operator units
- AS-interface master for connection to decentralised inputs/outputs covering an extensive range, for example in conveyor systems (type to be discontinued, do not use for new projects)
- Modules for connecting decentralised CPV and CPA valve terminals
- Extensions and supplements can be added at any time

Easy mounting:

- On H-rail
- On mounting surface
- With covers in welding environments

Simple servicing:

- LED display
- Manual override

Easy maintenance thanks to clip-on inscription fields.

Convenient diagnostics via fieldbus connection and integrated PLC:

- Status bits
- Diagnostic bits
- Integrated self-test

FESTO

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

Peripherals overview

Pneumatic components

Midi modules:

- Manifold block for two MIDI valves
- 500 l/min
- Up to cylinder diameter 63 mm

Maxi modules:

- Manifold block for two MAXI valves
- 1,250 l/min
- Up to cylinder diameter 80 mm

Valve actuation:

- All valves have an external pilot air supply and are therefore suitable for vacuum operation
- If the entire valve terminal is to be operated with a vacuum, the pilot air supply must be regulated and supplied externally
- If the pilot air supply is generated via one of the valve terminal's regulators, working pressure of > 4 bar must be applied to this compressed air supply
- All valves with non-detenting/detenting/blocked manual override (on request)

Additional modules:

- One-way flow control valves for setting the speed of travel separately with single and double-acting cylinders
- One-way flow control valves and pressure regulators can be fitted at working lines
- Intermediate pressure regulator plates for setting the contact pressure of a cylinder either at channel 1 or separately at channel 2 or 4

Flexible compressed air supply:

- Right-hand end plate with regulator for pilot air and flat plate silencer
- Additional compressed air supply with ducted exhaust air or integrated flat plate silencer
- Compressed air supply modules without regulator with externally regulated pilot air
- Multiple pressure zones, including vacuum, are possible for all valve sizes

Options:

- Vacant positions for subsequent extensions
- All connections also supplied with preassembled QS fittings (on request)
- All connections can also be supplied with an NPT thread

Service:

- Multiple valve sizes can be combined on a single terminal
- All valves can be replaced quickly and easily
- All valves are supplied with 1 or 2 LEDs
- All valves are ready for identification clips
- Flat design thanks to flat plate silencer
- Online valve terminal configurator available in the electronic catalogue or on the Internet

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

Peripherals overview

Multi-functional valve terminal

Components

- 1 Multi-pin node/fieldbus node/control block
- 2 Manifold block, size 4.0 (MIDI)
- 3 Adapter plate, size 4.0 to size 7.0, with regulator for auxiliary pilot air
- 4 Manifold block, size 7.0 (MAXI)
- 5 One-way flow control valve
- 6 Pressure regulator
- 7 Right-hand end plate
- 8 Additional compressed air supply with integrated silencer
- 9 Solenoid valve size 7.0 type MTH, JMTH
- 10 Port for ducted exhaust air
- 11 Solenoid valve size 4.0 type MT2H, JMT2H

Description

Valve terminals type 03 permit the combination of multiple valve sizes. This assures optimal adaptation to system requirements. The valves have a nominal size of 4.0 mm and 7.0 mm.

The transition from nominal size 4.0 mm (MIDI) to nominal size 7.0 mm

(MAXI) is made with an adapter plate. The adapter plate can only be used once in any given system. The MIDI valves must be mounted directly next to the nodes, followed by the MAXI valves.

Order:

- Nodes
- MIDI valves

- Adapter plate
- MAXI valves
- End plate

If no MIDI valves are used, the adapter plate must still be installed between the node and the first sub-base for MAXI valves.

Only valves with separate pilot air supply are used. Pilot pressure is supplied either via the adapter plate or the right-hand end plate. In either case, the maximum permissible pilot pressure is 5 bar. To limit the pilot pressure, special pressure regulators are provided on the adapter plate or the right-hand end plate.

Creating pressure zones

General information

A valve terminal can have multiple pressure zones and vacuum operation as well as integrated pressure regulators and one-way flow control valves.

For more than two pressure zones, multiple "compressed air supplies" or isolating discs can be combined. The isolating disc can only be inserted into a normal manifold block and not into the supply block.

MIDI

With MIDI valves, pressure zones for different pressures (including vacuum) are created via a "pressure zone supply" block.

The lower pressures should be supplied closest to the node.

MAXI

With MAXI valves, pressure zones are created by inserting an isolating disc. Air is then supplied via the adapter plate.

Additional power supply

Note

For valve terminals with more than ten valves and large-volume cylinders, at least one additional compressed air supply should be provided.

- 1 - Type to be discontinued
Available until 2012

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

Peripherals overview

FESTO

Vacuum operation

Note

If auxiliary pilot air is generated via one of the valve terminal's regulators, working pressure of > 4 bar must be applied to this compressed air supply.

If the entire valve terminal is to be operated with a vacuum, the pilot air supply must be regulated and supplied externally.

A filter must be installed upstream of valves operated in vacuum mode. This prevents any foreign matter in the intake air getting into the valve (e.g. when operating a suction cup).

Vertical stacking

General information

- 1 Solenoid valve
- 2 Pressure regulator
- 3 Manifold block
- 4 One-way flow control valve

Pressure regulator

A pressure regulator can be installed between the sub-base and the valve to influence the force of the actuated cylinder. There are three variants available:

- Regulation in port 1 (P)
- Regulation in port 2 (B)
- Regulation in port 4 (A)

One-way flow control valve

A block with one-way flow control valves can be mounted on the front of the sub-base to influence the speed of the controlled cylinder.

A block always contains 4 one-way flow control valves.

Instructions for use

Equipment

Operate system equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed so that, if used as designated, they will not require additional lubrication and will still achieve a long service life. The quality of compressed air downstream of the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all of your system equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.

Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524 HLP32; basic oil viscosity 32 CST at 40 °C).

Bio-oils

When using bio-oils (oils which are based on synthetic or native ester, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m³ must not be exceeded (see ISO 8573-1 Class 2).

Mineral oils

When using mineral oils (e.g. HLP oils to DIN 51524, parts 1 to 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m³ must not be exceeded (see ISO 8573-1 Class 4).

A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.

Welding environment

Valve terminal type 03 has a high-quality metal/plastic design.

Suitable covers should be used to prevent the terminal being damaged as a result of welding spatter.

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

Technical data – Adjustable four-fold one-way flow control valve for MIDI/MAXI valves

- Compact valve manifold
- Direct attachment to the manifold block

These valves are used to regulate air flow, for example to control the piston speeds of single or double-acting cylinders. Non-return valves block air flow in one direction. Air is only able to flow via the cross section which is adjusted with the throttle screw. Air flows freely in the other direction through the open non-return valve.

Type of mounting		On MIDI/MAXI valve terminal with 2 combi screws	
Mounting position		Any	
Ambient temperature	[°C]	-10 ... +60	
Temperature of medium	[°C]	-10 ... +60	
Operating medium		Filtered compressed air, lubricated or unlubricated → 9	
Operating pressure	[bar]	0.3 ... +10	
Nominal flow rate in flow control direction, flow control valve open ¹⁾	[l/min]	270	570
Nominal flow rate in return direction, flow control valve open ¹⁾	[l/min]	270	550
Nominal flow rate in return direction, flow control valve closed	[l/min]	200	350
Weight	[g]	120	237

1) 10 turns

Materials	
Housing	Aluminium
Regulating screws	Brass
Seals	Nitrile rubber

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

Technical data – Adjustable four-fold one-way flow control valve for MIDI/MAXI valves

Control characteristic

Type IGR-03-...

- 1 - Type to be discontinued
Available until 2012

FESTO

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

Technical data – Pressure regulator for MIDI/MAXI valves

An adjustable pressure regulator can be installed between the sub-base and the valve in order to control the force of the actuated cylinder. This pressure regulator maintains an essentially constant output pressure (secondary side) independent of pressure fluctuations (primary side) and air consumption.

General technical data (MIDI)			
Type	ILR-03-ZP-P-4,0	ILR-03-ZP-A-4,0	ILR-03-ZP-B-4,0
Part No.	164941	164943	164945
Design	Piston regulator		
Width [mm]	18		
Nominal size [mm]	4.0		
Type of mounting	On MIDI/MAXI valve terminal with 2 combi screws		
Mounting position	Any		
Ambient temperature [°C]	-10 ... +60		
Temperature of medium [°C]	-10 ... +60		
Operating medium	Filtered compressed air, lubricated or unlubricated → 9		
Supply pressure [bar]	0 ... +10		
Output pressure [bar]	0 ... +8		
Weight [g]	100		

General technical data (MAXI)			
Type	ILR-03-ZP-P-7,0	ILR-03-ZP-A-7,0	ILR-03-ZP-B-7,0
Part No.	164942	164944	164946
Design	Piston regulator		
Width [mm]	25		
Nominal size [mm]	7.0		
Type of mounting	On MIDI/MAXI valve terminal with 2 combi screws		
Mounting position	Any		
Ambient temperature [°C]	-10 ... +60		
Temperature of medium [°C]	-10 ... +60		
Operating medium	Filtered compressed air, lubricated or unlubricated → 9		
Supply pressure [bar]	0 ... +10		
Output pressure [bar]	0 ... +8		
Weight [g]	188		

Materials	
Housing	Aluminium
Seals	Nitrile rubber

Valve terminals type 03 VIMP-/VIFB-03, multi-functional MIDI/MAXI

Technical data – Pressure regulator for MIDI/MAXI valves

Components

- 1 Pressure adjustment screw
for 0 ... 8 bar range
- 2 Lock nut
- 3 Pressure indicator connection:
 - M3 (MIDI)
 - M5 (MAXI)

Product Range and Company Overview

A Complete Suite of Automation Services

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drives

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
