Key features and product range overview

Function

Reverse jet pulse valves VZWE are piloted 2/2-way valves. They generate pulses of compressed air using a suitable solenoid coil for mechanically cleaning filters and dust filter systems. The valves are actuated using short electrical pulses.

These pulses generate short pulses of compressed air at the output of the valve, which travel through the filter against the normal direction of flow of the filter system to release adhering particles from the filter.

General information

-  - Connecting thread
G 3/4 ... G 2 1/2
-  - Flow rate Kv
15 ... 210 m³/h

Design

- 2/2-way NC valve with diaphragm

Advantages

- High flow rates
- Fast opening and closing times
- Sturdy pilot system

Application

- Used in various filter systems for cleaning the filter elements
- Product filter systems
- Supply air filter systems
- Exhaust air filter systems
