

## Axis controllers CPX-CMAX

**FESTO**

## Overview

### Servo-pneumatic drive technology

Positioning and Soft Stop applications as an integral component of the valve terminal CPX – the modular peripheral system for decentralised automation tasks. The modular design means that valves, digital inputs and outputs, positioning modules and end-position controllers, as appropriate to the application, can be combined in almost any way on the CPX terminal.

#### Advantages:

- Pneumatics and electrics – control and positioning on one platform
- Innovative positioning technology – piston rod drives, rodless drives, rotary drives
- Actuation via fieldbus
- Remote maintenance, remote diagnostics, web server, SMS and e-mail alerts are all possible via TCP/IP
- Modules can be quickly exchanged and expanded without altering the wiring

## Key features

## Axis controller CPX-CMAX

**Free choice:**  
Position and force control, directly actuated or selected from one of 128 configurable position sets.  
If you are looking for something more: The configurable record sequencing function enables simple functional sequences to be realised in the axis controller CPX-CMAX.  
**Everything is recognisable:**  
The auto-identification function identifies each participant with its device data on the controller CPX-CMAX.

**Also included:**  
Actuation of a brake or clamping unit via the proportional directional control valve VPWP is also part of the scope of performance of the controller CPX-CMAX.  
Up to 8 modules (max. 8 axes) can be operated in parallel and independently of each other.  
Commissioning via FCT (Festo configuration software) or via fieldbus:  
No programming, only configuration.

**Advantages:**

- Greater flexibility
- OEM friendly – commissioning also via fieldbus
- Easy installation and fast commissioning
- Cost-effective
- You program the system in your PLC environment

## End-position controller CPX-CMPX

Data sheets → Internet: [cpx-cmpx](http://cpx-cmpx)

Fast travel between the mechanical end stops of the cylinder, stopping gently and without impact in the end position.  
Fast commissioning via control panel, fieldbus or handheld unit.  
Improved control of standstills.  
Actuation of a brake or clamping unit via the proportional directional control valve VPWP is an integral part of the controller CMPX.

Depending on the fieldbus chosen, up to 9 end-position controllers can be actuated on the CPX terminal.  
All system data can be read and written via the fieldbus, including, for example, the mid-positions.

**Advantages:**

- Greater flexibility
- OEM friendly – commissioning also via fieldbus
- Easy installation and fast commissioning
- Cost-effective
  - Up to 30% faster cycle rates
  - Significantly reduced system vibration
- Improved work ergonomics thanks to significantly reduced noise level
- The extended diagnostics help to reduce the service time of the machine

## Proportional directional control valve VPWP

Data sheets → Internet: [vpwp](http://vpwp)

The 5/3-way proportional directional control valve for applications with Soft Stop and pneumatic positioning.  
Fully digitalised – with integrated pressure sensors, with new diagnostic functions.  
In sizes 4, 6, 8 and 10.  
Flow rates of 350, 700, 1400 and 2000 l/min.

With switching output for controlling a brake.  
Coloured compressed air supply ports.  
Pre-assembled cables guarantee faultless and fast connection with the controllers CPX-CMPX and CPX-CMAX.

**Advantages:**

- Easy installation and fast commissioning
- Reduction of system downtimes thanks to the new diagnostic options
- With switching output for actuating a brake/clamping unit
