

## Guide axes DGC-FA, without drive

**FESTO**

## Key features

### At a glance

- Driveless linear guide units with guide and freely movable slide
- The guide axis is designed to support forces and torques in multi-axis applications
- Increased torsional resistance
- Reduced vibrations with dynamic loads
- Drive axis and guide axis can be placed side by side or one above the other

### System product for handling and assembly technology

### System components and accessories

		Description	→ Page/Internet
[1]	Axes	Wide range of combinations possible within handling and assembly systems	axis
[2]	Guide axes	For absorbing forces and torques in multi-axis applications	guide axis
[3]	Drives	Wide range of combinations possible within handling and assembly systems	drive
[5]	Gripper	Wide range of variations possible within handling and assembly technology	gripper
[6]	Adapter	For drive/drive and drive/gripper connections	adapter kit
-	Motors	Servo and stepper motors, with or without gear unit	motor

## Key features

### Guide axes and the corresponding axes/drives

#### Guide axis ELFA-RF

- Can be combined with:
  - Toothed belt axis ELGA-TB-RF
- For size 70, 80
- Load capacity up to max. 800 N or 180 Nm

#### Guide axis EGC-FA

- Can be combined with:
  - Toothed belt axis EGC-TB
  - Spindle axis EGC-BS
- For size 70 ...185
- Load capacity up to max. 15200 N or 1157 Nm

#### Guide axis DGC-FA

- Can be combined with:
  - Linear drive DGC-KF
- For size 8 ... 63
- Load capacity up to max. 15200 N or 1157 Nm

#### Guide axis FDG-ZR-RF

- Can be combined with:
  - Toothed belt axis DGE-ZR-RF
- For size 25 ... 63
- Load capacity up to max. 600 N or 600 Nm

#### Guide axis FDG-ZR/SP

- Can be combined with:
  - Toothed belt axis DGE-ZR-KF
  - Spindle axis DGE-SP-KF
- For size 18 ...63
- Load capacity up to max. 14050 N or 1820 Nm

## Options

### C – Central lubrication

The lubrication adapter enables the guide of the guide axis DGC-FA to be permanently lubricated in applications in humid or wet ambient conditions using semi or fully automatic relubrication devices.

The adapters are suitable for oils and greases.

- For piston  $\varnothing$  25, 32, 40, 63 mm
- Connections:
  - On both sides of the slide
  - In three places (front, top, rear) on each side

Technical data → page 12

### Clamping unit – 1H-PN

- Single-channel design, for holding loads
- Reliable holding is guaranteed since the forces act directly on the slide
- A limited number of emergency braking operations are permissible with sizes 40 and 50

- For piston  $\varnothing$  25, 32, 40, 50 mm

Technical data → page 9

Peripherals overview

1)

1)

-  - **Note**  
 1) End stops or shock absorbers must not be removed.

## Peripherals overview

Variants and accessories		
Type/order code	Description	→ Page/Internet
[1] Guide axis DGC-FA	Guide axis without accessories	6
[2] Intermediate position Z1/Z2/Z3	Enables up to three intermediate positions	dadm
[3] [6] Mechanical end-position limiter YWZ	For variable end-position adjustment, e.g. for format adjustments	41
[4] Centring pin/sleeve <sup>1)</sup> ZBS/ZBH	<ul style="list-style-type: none"> <li>• For centring loads and attachments on the slide</li> <li>• For centring the drive DGC without foot mountings (user-specific)</li> </ul>	43
[5] Clamping unit 1H-PN	For holding loads	9
– Cushioning P	Non-adjustable, elastic cushioning. Only used for low speeds.	38
[7] Shock absorber YSR	Self-adjusting, hydraulic shock absorber with spring return and linear cushioning characteristics.	38
[8] Shock absorber YSRW	Self-adjusting hydraulic shock absorber with spring return and progressive cushioning characteristics	38
[9] One-way flow control valve GRLA	For regulating speed	grla
[10] Proximity switch G/H/I/I)	For sensing the slide position	dgc
[11] Connecting cable V	Via proximity switch	dgc
[12] Slot cover L	For protecting against contamination and securing the proximity switch cable	43
[13] Profile mounting M	Simple and precise mounting option via dovetail connection.	40
[14] Slot nut B	For mounting attachments	43
[15] Foot mounting F	For mounting on the end cap	39

1) Included in the scope of delivery of the axis

	Note on materials	RoHS-compliant

## Datasheet

### Load values

The indicated forces and torques refer to the centre of the slide surface.  
 These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

If the drive is simultaneously subjected to several of the forces and torques indicated below, the following equation must be satisfied in addition to the indicated maximum loads:

$$\frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} + \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} \leq 1$$

Permissible forces and torques		8	12	18	25	32	40	50	63
Piston $\varnothing$		8	12	18	25	32	40	50	63
$F_{y_{max}}$	[N]	300	650	1850	3050	3310	6890	6890	15200
$F_{z_{max}}$	[N]	300	650	1850	3050	3310	6890	6890	15200
$M_{x_{max}}$	[Nm]	1.7	3.5	16	36	54	144	144	529
$M_{y_{max}}$	[Nm]	4.5	10	51	97	150	380	634	1157
$M_{z_{max}}$	[Nm]	4.5	10	51	97	150	380	634	1157

Technical data – Clamping unit		25	32	40	50
Size		25	32	40	50
Pneumatic connection		M5	M5	M5	M5
Clamping type		Clamping via spring force, release via compressed air			
Static holding force	[N]	320	500	1200	1200
Max. number of emergency braking operations <sup>1)</sup> at reference energy	[l]	–	–	750 35	750 35
Number of clamping operations under rated load	[millions of switching cycles]	0.45	0.55	0.05	0.05

Dimensions → page 34

1) Emergency braking refers to braking the payload if the drive axis loses power.

Operating and environmental conditions – Clamping unit	
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]
Operating pressure	
Clamping unit open	[bar] 4.5 ... 8
Clamping unit closed	[bar] Unpressurised
Ambient temperature	[°C] –10 ... +60

## Datasheet

### Maximum permissible piston speed $v$ as a function of payload $m$ and distance $r_{max}$ from centre of mass

Piston  $\varnothing$  8/12 with elastic cushioning P

Piston  $\varnothing$  8 ...40 with shock absorber cushioning YSR

Piston  $\varnothing$  8 ...40 with shock absorber cushioning YSRW

- $\varnothing$  8
- · - · -  $\varnothing$  12
- - -  $\varnothing$  18
- · · · ·  $\varnothing$  25
- · - · -  $\varnothing$  32
- - -  $\varnothing$  40
- - -  $\varnothing$  50
- · - · -  $\varnothing$  63

#### Note

These specifications represent the maximum values that can be achieved. In practice, these values can fluctuate dependent on the position of the payload and mounting position.

### Operating range of the cushioning

The end-position cushioning must be adjusted to ensure jerk-free operation. If the operating conditions are outside the permissible range, the moving mass must be cushioned using suitable equipment (shock absorbers, stops, etc.), preferably at the centre of mass.

#### Note

To avoid distortion in the slide, the bearing surfaces of the attachments must maintain a flatness of 0.03 mm.

Data for horizontal mounting position:

Piston $\varnothing$	8	12	18	25	32	40	50	63
Distance $r_{max}$ [mm]	25	35	35	50	50	50	50	50

## Datasheet

### Number of profile mountings MUC as a function of weight force F and support spacing l

The drive may need to be supported to limit the deflection in the case of large strokes. The following graphs can be used to determine the maximum permissible support spacing as a function of the mounting position and the applied weight and normal forces.

#### Horizontal mounting position

#### Vertical mounting position

#### Example:

The guide axis DGC-25-1500 is subjected to a force of 300 N in the horizontal mounting position.

The axis has an overall length of:

$$\begin{aligned}
 l &= \text{stroke length} + L1 \\
 &= 1500 \text{ mm} + 200 \text{ mm} \\
 &= 1700 \text{ mm}
 \end{aligned}$$

According to the graph, the max. support spacing for the axis DGC-25 with a force of 300 N is 1300 mm.

In this example, profile mountings are required as the max. support spacing (1300 mm) is smaller than the overall length of the axis (1700 mm).

## Datasheet

### Central lubrication

The lubrication adapters enable the guide of the linear drive DGC-KF to be permanently lubricated in applications in humid or wet ambient conditions using semi or fully automatic relubrication devices.

- For piston  $\varnothing$  25, 32, 40, 63
- The modules are suitable for oils and greases.
- The dimensions of the linear drive DGC-KF are the same with and without central lubrication modules.
- Both lubrication adapters must be connected
- There are three connection options on each side
- Can be used in combination with:
  - Additional slide K
- Cannot be used in combination with:
  - Protected recirculating ball bearing guide GP

Slide dimensions

→ page 28

Order code C in the modular product system → page 38

### Connection options

In combination with shock absorbers in the end caps, only the rear or top connection can be used.

Only the connection on the front or top can be used in combination with shock absorber retainer DADP.

### Connection option for customer design

The drawing on the right shows the connection option on the top lubrication interface using a customer design.

D1  $8^{+0.2}$  mm

D2 6 mm

T1  $0.6_{-0.05}$  mm

T2  $0.1^{+0.2}$  mm

O-ring  $\varnothing$  6x1 mm (DIN3771)

[1] Slot depth for O-ring

[2] Required air gap

Additional dimensions → page 28

### Design of a central lubrication system

A central lubrication system requires various additional components. The illustration shows different options (using a hand pump, pneumatic container pump or electric container pump) required as a minimum for designing a central lubrication system. Festo does not sell these additional components; however, they can be obtained from the following companies:

- Lincoln
- Bielomatik
- SKF (Vogel)

Festo recommends these companies because they can supply all the necessary components.

[1] Hand pump

[2] Pneumatic container pump

[3] Electric container pump

[4] Manually operated container pump

[5] Nipple block

[6] Distributor block

[7] Tubing or piping

[8] Fittings

Ordering data – Modular product system

 **Note**  
 1) End stops or shock absorbers must not be removed.

## Ordering data – Modular product system

### Working stroke reduction when ordering an additional slide K

For a linear drive DGC with additional slide, the working stroke is reduced by the length of the additional slide and the distance between the two slides.

Assuming:  
 DGC-12-500-...  
 L = 20 mm  
 L17 = 65 mm

∅ [mm]	8	12	18	25	32	40	50	63
L17	52	65	99	118.5	145.7	195.4	256.8	280

The working stroke is reduced to  
 $415 \text{ mm} = 500 \text{ mm} - 20 \text{ mm} - 65 \text{ mm}$

## Accessories

### Technical data and ordering data

#### Precision adjustment

 **Note**

The stop KYC can be used in both directions.

#### Mounting example

 **Note**

The stop KYC can be mounted at any position along the stroke.

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements that are in direct contact with a normal industrial environment.

2) Suitable for ATEX
