

## Spindle axes ELGD-BS

**FESTO**

## Key features

### At a glance

ELGD-BS (standard design)

- Profile with a square cross section and sturdy drive elements for high feed forces

ELGD-BS-WD (wide design)

- Reduced profile height offers smaller installation dimensions for handling systems and applications that do not require such high feed forces
- 30% lighter, while rigidity and guide load capacity are still similar to the axis in standard design

Innovative guide technology

- Excellent rigidity and load capacity of the guide for higher loads in the same installation space
- Less vibration and smoother slide movement protect sensitive workpieces
- High speeds ensure short cycle times and a very long service life minimises downtime

Powerful drive elements

- High feed forces and acceleration for shorter process times
- Long service life and increased reliability reduce TCO

Innovative stainless steel cover strip solution

- Abrasion-free and clean surface protects workpieces from particles
- Minimised number of particles for use in cleanrooms
- Reduced ingress of dirt for use in harsh ambient conditions

Optional:

- Extended or additional slide for higher axial and lateral torques and higher loads

Sealing air connection:

- Air is exchanged between the interior of the cylinder and the environment via the sealing air connection. This prevents negative pressure or excess pressure from building up inside the cylinder.
- Application of slight negative pressure prevents the emission of particles
- Application of slight excess pressure prevents the ingress of particles

### Engineering tools

More information → [electric-motion-sizing](#)

Save time with smart engineering tools for the optimal solution. Our goal is to increase your productivity. Our engineering tools play an integral part in this. They help you size your system correctly, tap into unimagined productivity reserves and generate additional productivity along the entire value chain. In every phase of your project, from the initial contact to the modernisation of your machine, you will come across a number of different tools which will be of use to you.

Electric Motion Sizing

- Create the optimum drive package quickly and reliably. Electric Motion Sizing calculates suitable combinations of electric axis, electric motor and servo drive using just a few application details. It provides all the relevant data including the bill of materials and documentation for your selected combination. This avoids design errors and results in significantly improved energy efficiency for the system. A seamless connection to the Festo Automation Suite also makes commissioning easier for you.

### Icons

More information → [elgd-bs](#)

The icons shown in this document are also available online. There, precise values can be displayed.

## Key features

### Drive system

[BS] Ball screw

- For applications requiring precision
- Extremely reliable and long service life
- For high loads

### Stroke reserve

- The stroke reserve is a safety distance from the mechanical end position and is not used in normal operation.
- The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke.

### Spindle pitch

- The spindle pitch describes the distance travelled by the spindle nut per revolution of the spindle in millimetres.
- Thanks to the different spindle pitches, it is possible to choose the smallest possible motor for the required speed and feed force.

### Slide design

[ ] Standard

[L] Long

### Additional slide

[ZR] Right

- The additional slide is currently only available on the right (the side away from the motor)
- The additional slide is always a standard slide

### Lubrication

[ ] Standard

[GN] Lubrication nipple

With lifetime lubrication. Lubrication nipple not included in delivery.

- The lubrication adapters enable the guide to be permanently lubricated using semi- or fully automatic relubrication devices
- The adapters are suitable for oils and greases

$J_L$ per kg payload	[kg mm <sup>2</sup> /kg]	0.633	0.633	2.533	2.533

Mass moment of inertia							
Size		80					
Spindle pitch	[mm/rev]	5		10		20	
Slide design		L		L		L	
$J_0$	[kg mm <sup>2</sup> ]	10.619	13.662	10.619	13.662	10.619	13.662
$J_H$ per metre stroke	[kg mm <sup>2</sup> /m]	39.016	39.016	39.016	39.016	39.016	39.016
$J_L$ per kg payload	[kg mm <sup>2</sup> /kg]	0.633	0.633	2.533	2.533	0.101	0.101

The mass moment of inertia  $J_A$  of the entire axis is calculated as follows:

$$J_A = J_0 + J_H \times \text{working stroke [m]} + J_L \times m_{\text{payload [kg]}}$$

## Homing

Homing can be carried out in two ways:

- Against a fixed stop
- Using a reference switch

The following values must be observed:

Size		60	80
Max. impact energy	[J]	1	2
Note on the impact energy in the end positions	[m/s]	At maximum homing speed of 0.01 m/s	

## Materials

Axis	
Drive cover	Gravity die-cast aluminium, painted
Spindle nut	Steel
Spindle	Steel
Slide	Wrought aluminium alloy
Cover strip	High-alloy stainless steel
Guide	Steel
Profile	Anodised wrought aluminium alloy
Note on materials	RoHS-compliant
LABS (PWIS) conformity	VDMA24364 zone III

Datasheet

Load values

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect.

The appropriate size is selected using the following three steps:

1. Check the maximum permissible values (must not be exceeded)
2. Calculate the load comparison factor
3. Determine the service life

Distance from the slide surface to the centre of the guide

Distance from the slide surface to the centre of the guide

Size	60	80
Dimension x [mm]	60	62

1. Check the maximum permissible values

Max. permissible forces and torques for the overall axis (strength limits)

Size		60		80	
			L		L
Max. force $F_y$ , overall axis	[N]	930	1650	2291	4581
Max. force $F_z$ , overall axis	[N]	1300	2750	2500	4000
Max. torque $M_x$ , overall axis	[Nm]	36	65	95	160
Max. torque $M_y$ , overall axis	[Nm]	15	85	42	335
Max. torque $M_z$ , overall axis	[Nm]	15	45	42	275

Maximum permissible support spacing L as a function of force F

The axis may need to be supported in order to limit deflection in the case of long strokes.

The following graphs can be used to determine the maximum permissible support spacing L as a function of force F acting on the axis. The deflection is  $f = 0.5 \text{ mm}$ .

Size 60

Size 80

— F<sub>y</sub>  
- - - F<sub>z</sub>

— F<sub>y</sub>  
- - - F<sub>z</sub>

Datasheet

2. Calculate the load comparison factor

**Note**  
 For a guide system to have a service life of 5000 km, the load comparison factor must have a value of  $f_v \leq 1$ , based on the maximum permissible forces and torques for a service life of 5000 km.  
 This formula can be used to calculate a guide value.  
 The engineering software "Electric Motion Sizing" is available for more precise calculations → [www.festo.com/x/electric-motion-sizing](http://www.festo.com/x/electric-motion-sizing)

If the axis is subjected to two or more of the indicated forces and torques at the same time, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

$F_1/M_1$  = values occurring in the application

$F_2$  = permissible values at 5000 km from the graph "support spacing over load"

$M_2$  = maximum permissible values (see table)

Max. permissible torques for the guide calculation with reference service life

Size	60		80		
Slide design		L		L	
Reference service life	[km]	5000			
Max. torque Mx	[Nm]	37	65	95	180
Max. torque My	[Nm]	15	141	42	390
Max. torque Mz	[Nm]	15	139	42	390

Maximum permissible support spacing L as a function of force F

Depending on how firmly the axis is supported, the maximum permissible forces vary due to the design of the guide system.

If the axis is used as a cantilever or in yoke operation, the values for a support spacing of 2000 mm can be selected.

## Datasheet

### 3. Determine the service life

The service life of the guide depends on the load. To be able to provide an indication of the service life of the guide, the graph below plots the load comparison factor  $f_v$  against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor  $f_v$  greater than 1.3.

Load comparison factor  $f_v$  as a function of service life  $l$

Example:

A user wants to move an  $x$  kg load. Using the formula (→ page 8) gives a value of 1.3 for the load comparison factor  $f_v$ . According to the graph, the guide would have a service life of approx. 2500 km. Reducing the acceleration reduces the  $M_z$  and  $M_y$  values. A load comparison factor  $f_v$  of 1 now gives a service life of 5000 km.

Note:

If the application has been calculated using “Electric Motion Sizing”, the average guide comparison index represents the workload of the guide. (100% average guide comparison index corresponds to  $f_v = 1$ ). With this value, the service life can be estimated using the service life graph

### Comparison of the characteristic load values for 100 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of the bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km to ISO or 50 km to JIS.

As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes ELGD with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

#### Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Size	60		80	
		L		L

## Datasheet

## 2nd moment of area

Size		60	80
$I_y$	[mm <sup>4</sup> ]	$0.509 \times 10^6$	$1.213 \times 10^6$
$I_z$	[mm <sup>4</sup> ]	$0.686 \times 10^6$	$2.052 \times 10^6$

## Recommended deflection limits

To avoid impairing the functionality of the axes, we recommend that the following deflection limits are observed. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dynamic deflection (moving load)	Static deflection (stationary load)
60, 80	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

## Ordering data – Modular product system

More information → [elgd-bs](#)

	Size	Stroke [mm]	Part no.	Type
	60	50 ... 1000	8176874	ELGD-BS-KF-60-...
	80	50 ... 2000	8176875	ELGD-BS-KF-80-...

Peripherals overview

## Peripherals overview

Accessories			
	Type	Description	→ Page/Internet
[1]	Spindle axis ELGD-BS	Electric drive	elgd-bs
[2]	Profile mounting EAHF-E24-...-D...	For axis/axis mounting with adapter plate	26
[3]	Proximity switch, T-slot SIES-8M	Inductive proximity switch, for T-slot	27
[4]	Slot cover ABP-S	For protection against contamination	27
[5]	Clip SMBK	For mounting the proximity switch cable in the slot	27
[6]	Profile mounting EAHF-E24-...-S	For mounting the axis on the side of the profile	26
[7]	Profile mounting EAHF-E24-...	For mounting the axis on the side of the profile	26
[8]	Sensor bracket EAPM-E24-SHO	For mounting third-party sensors on the axis	27
[9]	Sensor OMRON	Third-party sensor OMRON, EE-SX674 series	-
[10]	Sensor bracket EAPM-E24-SHE	For mounting the inductive proximity switches SIEN-M8 (round design) on the axis	26
[11]	Proximity switch, M8 SIEN-M8	Inductive proximity switch, round design	27
[12]	Switch lug EAPM-E24-SLS	For sensing the slide position via inductive proximity switch SIES-8M or for optical sensors (Omron) with sensor bracket EAPM-E24-SHO	26
[13]	Switch lug EAPM-E24-SLE	For sensing the slide position via inductive proximity switch SIEN-M8 (round design) and sensor bracket EAPM-E24-SHE	26
[14]	Axial kit EAMM	For axial motor mounting	<a href="#">eamm-a</a>
[15]	Parallel kit EAMM	For parallel motor mounting	<a href="#">eamm-u</a>
[16]	Motor EMMT	Motors and kits specially matched to the axis Detailed information: <a href="http://www.festo.com/catalogue/eamm">www.festo.com/catalogue/eamm</a> Engineering tool: <a href="http://www.festo.com/x/electric-motion-sizing">www.festo.com/x/electric-motion-sizing</a>	<a href="#">emmt</a>

## Accessories

## Permissible axis/motor combinations for axial and parallel assembly kits

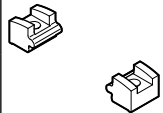

Below are the links where you can find all the information about:

- Axis/motor combinations
- Permissible external motors
- Technical data
- Dimensions

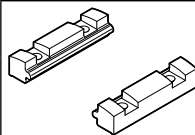

For axial assembly kits → Internet: [eamm-a](#)

For parallel assembly kits → Internet: [eamm-u](#)

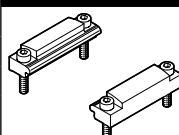

## Profile mounting EAHF-E24-...-P-S

	Description	Material	Product weight	Part no.	Type
	For size 60, 80	Anodised wrought aluminium alloy	18 g	<b>8197128</b>	<b>EAHF-E24-60-P-S</b>

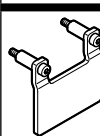

## Profile mounting EAHF-E24-...-P

	Description	Material	Product weight	Part no.	Type
	For size 60, 80	Anodised wrought aluminium alloy	71 g	<b>8197132</b>	<b>EAHF-E24-60-P</b>

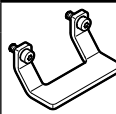

## Profile mounting EAHF-E24-...-P-D...

	Description	Material	Product weight	Part no.	Type
	ELGD-60 to ELGD-60	Anodised wrought aluminium alloy	87 g	<b>8197131</b>	<b>EAHF-E24-60-P-D5</b>
	ELGD-60 to ELGD-80		119 g	<b>8197129</b>	<b>EAHF-E24-60-P-D4</b>
	ELGD-80 to ELGD-100		133 g	<b>8197130</b>	<b>EAHF-E24-60-P-D6</b>

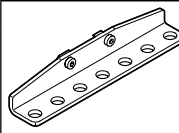

## Switch lug EAPM-E24-...-SLS

	Description	Material	Product weight	Part no.	Type
	For size 60, 80	Steel	32 g	<b>8197117</b>	<b>EAPM-E24-60-SLS</b>

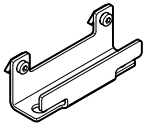

## Switch lug EAPM-E24-...-SLE

	Description	Material	Product weight	Part no.	Type
	For size 60, 80	Steel	20 g	<b>8197116</b>	<b>EAPM-E24-60-SLE</b>

## Sensor bracket EAPM-E24-...-SHE

	Description	Material	Product weight	Part no.	Type
	For size 60, 80	Steel	103 g	<b>8197123</b>	<b>EAPM-E24-60-SHE</b>

## Accessories

Sensor bracket EAPM-E24-...-SHO						
	Description	Material	Product weight	Part no.	Type	
	For size 60, 80	Steel	67 g	<b>8197121</b>	<b>EAPM-E24-60-SHO</b>	

Proximity switch for T-slot, inductive							Datasheets → Internet: sies
	Type of mounting	Switching output	Electrical connection	Cable length [m]	Part no.	Type	
<b>N/O</b>							
	Inserted in the slot from above, flush with the cylinder profile	PNP	Cable, 3-wire	7.5	<b>551386</b>	<b>SIES-8M-PS-24V-K-7.5-OE</b>	
			Plug M8 x 1, 3-pin	0.3	<b>551387</b>	<b>SIES-8M-PS-24V-K-0.3-M8D</b>	
		NPN	Cable, 3-wire	7.5	<b>551396</b>	<b>SIES-8M-NS-24V-K-7.5-OE</b>	
			Plug M8 x 1, 3-pin	0.3	<b>551397</b>	<b>SIES-8M-NS-24V-K-0.3-M8D</b>	
<b>N/C</b>							
	Inserted in the slot from above, flush with the cylinder profile	PNP	Cable, 3-wire	7.5	<b>551391</b>	<b>SIES-8M-PO-24V-K-7.5-OE</b>	
			Plug M8 x 1, 3-pin	0.3	<b>551392</b>	<b>SIES-8M-PO-24V-K-0.3-M8D</b>	
		NPN	Cable, 3-wire	7.5	<b>551401</b>	<b>SIES-8M-NO-24V-K-7.5-OE</b>	
			Plug M8 x 1, 3-pin	0.3	<b>551402</b>	<b>SIES-8M-NO-24V-K-0.3-M8D</b>	

Proximity switch M8 (round design), inductive							Datasheets → Internet: sien
	Switching output	Electrical connection	Cable length [m]	Part no.	Type		
<b>N/O</b>							
	PNP	Cable, 3-wire	2.5	<b>150386</b>	<b>SIEN-M8B-PS-K-L</b>		
	NPN		2.5	<b>150384</b>	<b>SIEN-M8B-NS-K-L</b>		
	PNP	Plug M8 x 1, 3-pin	–	<b>150387</b>	<b>SIEN-M8B-PS-S-L</b>		
	NPN		–	<b>150385</b>	<b>SIEN-M8B-NS-S-L</b>		
<b>N/C</b>
