

Three-dimensional gantries EXCL

FESTO

Key features

At a glance

The three-dimensional gantry EXCL is ideal, for example, for analytical processes where sample vials are to be opened and liquid samples pipetted in the same three-dimensional gantry. The optional second Z-axis enables two front units to move independently of each other, such as the rotary gripper module EHMD and the smart pipette DHOP.

EXCL is a three-dimensional gantry for installation in devices such as analytical table top units and is optimised for life sciences applications. The working area (X,Y) can be configured up to 1000 mm x 700 mm in 1-mm steps. The stroke of each of the Z-axes can be selected separately from 50, 100, 150 and 200 mm. Configuration as a planar surface gantry X,Y without Z-axes is also possible.

Application examples with further Festo components

- Automated sample preparation for the analysis of sample vials (e.g. clinical analysis of patient samples or material analysis of samples for quality assurance)
 - using the rotary gripper module EHMD
- Picking up sample vessels from a rack and rotating them
 - using the rotary gripper module EHMD
- Taking a liquid sample and transferring it to a microwell plate for further analysis
 - using the smart pipette DHOP or pipette head DHOE
- Dispensing reagents into the microwell plate
 - using the dispense head VTOE
- Implementing rinsing procedures in the ELISA process
 - using the dispense head VTOI

Operating mode

Key features

Variants

[Z1...L] X-axis motor on left and 1 Z-axis

[Z1...R] X-axis motor on right and 1 Z-axis

[Z2...L] X-axis motor on left and 2 Z-axes

[Z2...R] X-axis motor on right and 2 Z-axes

Key features

Variants

[YS1...L] X-axis motor on left and 1 slide

[YS1...R] X-axis motor on right and 1 slide

[YS2...L] X-axis motor on left and 2 slide

[YS2...R] X-axis motor on right and 2 slide

Z-axis	[m/s]	0.015
Max. creep speed		
X-axis	[m/s]	0.003
Y-axis	[m/s]	0.003
Z-axis	[m/s]	0.003
Repetition accuracy	[mm]	±0.1
Mounting position	Horizontal	
Type of mounting	With female thread M3	

1) Rated load = tool load (attachment components) + payload

2) Perpendicular to the working plane, at standstill

3) Tested at: v=0.4m/s and two Z-axes: Additional weight: Z1=0.5kg and Z2=1.5kg

 [3] **50, 100, 150, 200** Mandatory with number of Z-axes "2 axes"

Selection of cable length

1) The cable length can be selected using the modular product system. This specification relates to the output of the energy chain at the X-axis (dimension L) and describes the minimum length by which the cables protrude.
