

## Shut-off valve VBOC

**FESTO**

## Characteristics

### At a glance

- [1] Sensor LED, incl. cable connection
- [2] Pneumatic port 12, pilot air
- [3] Pneumatic port 1, compressed air supply
- [4] Pneumatic port 2, drive
- [5] Exhaust function (non-detenting)
- [6] Manual override

### Diagrams

The diagrams shown in this document are also available online. These can be used to display precise values.

### Valve function

The valve VBOC is a pneumatically actuated shut-off valve (2/2-way valve, normally closed) for direct mounting on a pneumatic actuator. The component can be used as a safety sub-function SSC (Safe Stopping and Closing) in accordance with VDMA 24584. The integrated switching position monitoring (closed) provides a diagnostic function.

### Additional function 2

The valve is available in 4 variants, in the basic function or with optional additional functions.

[ ] None

- Basic valve: 2/2-way shut-off valve, pneumatically controlled
- Diagnostic function, integrated switching position monitoring

[S7] Exhaust function, manual

- Basic valve, additionally with manual override and exhaust function (non-detenting)

To enable port 2 to be exhausted, the shut-off valve must be unlocked using the manual override.

The exhaust function can only be ensured if there is no pressure at port 1.
