Proportional flow control valve VEMD

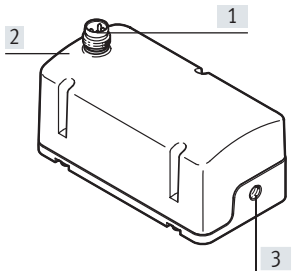
Key features

Description

Thanks to the integrated low-noise piezo technology, minimal energy consumption and compact dimensions, the valve VEMD is perfectly suited to mobile applications.

Advantages:
- Very low energy consumption
- High dynamic response
- No self-heating
- Absolutely silent
- Excellent price/performance ratio
- Sturdy and durable
- Linear control response
- Small installation space
- Minimal weight

Mode of operation



[1] Electrical connection
[2] Connection 1 (pressure supply connection)
[3] Connection 2 (working connection)

The VEMD is a mass flow controller with integrated piezo actuator. The flow rate is controlled via a closed-loop control circuit with integrated thermal sensor.

An analogue interface allows the setpoint value for the flow rate to be specified and the actual value to be fed back.

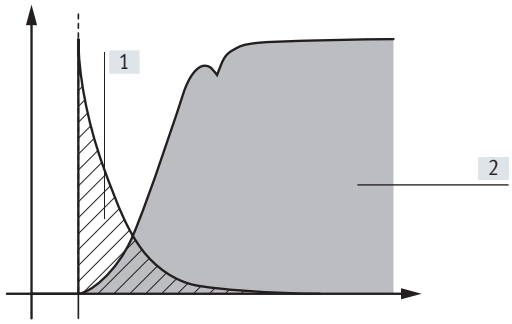
Range of application

The proportional flow control valve VEMD is intended to be used for controlling the flow of air and inert gases in relation to a specified setpoint value.

The flow control valve is suitable for applications in medical technology within the bounds of the specified technical characteristics.

For applications with special requirements, such as with regard to hygiene and sterility, additional measures may be required.

Low energy consumption

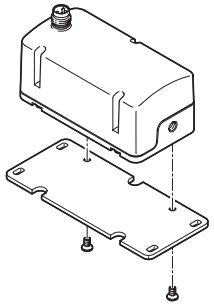


Y-axis: Current I
X-axis: Time t
[1] Striped area: Piezo valve
[2] Grey area: Solenoid valve

Compared with solenoid valves, proportional valves with piezo technology require virtually no energy to maintain an active state thanks to their capacitive principle. The piezo valve operates like a capacitor: it needs current only at the start in order to charge the piezoceramics.

No further energy is needed to maintain its state. The valves therefore generate no heat. They consume up to 95% less energy than solenoid valves, which permanently require an electrical current.

Mounting



The valve VEMD is mounted on the wall mounting VAME-P14-W using two screws.

Product range overview

	Function	Description	Nominal operating voltage	Setpoint value		Flow rate control range	Operating pressure	
			[V DC]	[V]	[mA]	[l_n/min]	[MPa]	[bar]
	Proportional flow control valve with display, nominal width 6 mm	Mass flow controller, 2-way valve, normally closed	24	0 ... 10 1 ... 5	4 ... 20	4 ... 200	0.1 ... 0.6	1 ... 6
	Proportional flow control valve without display, nominal width 1.4 mm		24 12	0.2 ... 10	–	0 ... 20	0 ... 0.25	0 ... 2.5
	Proportional flow control valve without display, nominal width 6 mm		12	0 ... 10 1 ... 5	4 ... 20	4 ... 200	0.1 ... 0.6	1 ... 6
