

Solenoid valves VUVG-F1A/valve terminals VTUG-F1A

FESTO

Key features

Innovative

- Festo-specific I-Port interface for bus nodes (CTEU)
- IO-Link® mode for direct connection to a higher-level IO-Link master
- Flexible multi-pin plug connection using Sub-D or ribbon cable
- Reversible piston spool valves, up to 24 valve positions
- Reduced power consumption
- Excellent price/performance ratio

Versatile

- Choice of quick push-in connectors
- Multiple pressure zones possible
- Sub-D variant and fieldbus interface with protection to IP67
- Internal or external pilot air with the same manifold rail possible by using blanking plugs
- Sub-base valves with working ports underneath for installation in control cabinets

Reliable

- Sturdy and durable metal components
 - Valves
 - Manifold rails
- Fast troubleshooting thanks to LED indicator
- Manual override: choose from non-detenting, detenting or covered

Easy to install

- Easy to mount thanks to captive screws and seal
- Easy-to-change connection technology
- Inscription label holder for labelling

Ordering data – Product options

Configurable product

This product and all its product options can be ordered using the configurator.

The configurator can be found at

→ www.festo.com/catalogue/...

Enter the part number or the type.

Part no.

8143237

Type

VTUG-F1A

Key features

Sub-base valves for valve terminal VTUG-F1A

VUVG-B...1T1, sub-base valve

In the case of sub-base valves, the supply ports (1, 3 and 5) and the working ports (2, 4) are connected to the valve via pneumatic links (e.g. sub-base).

Overview – Valve terminal with multi-pin plug connection and fieldbus interface

Different electrical connections:

- [1] Ribbon cable or Sub-D
- [2] I-Port interface
- [3] Bus node CTEU

Key features

Equipment options

Valve functions

- 2x 3/2-way, 3/2-way, 5/2-way, 5/3-way valves
- Reversible piston spool valves, up to 24 valve positions

Electrical connection options

- IO-Link® mode for direct connection to a higher-level IO-Link master
- Flexible multi-pin plug connection using Sub-D or ribbon cable
- Festo-specific I-Port interface for bus nodes (CTEU)

Basic valves VUVG-F1A

Size

- 10
- 14

Variants

- Sub-base valve

Valve functions

3/2-way valve

- Single solenoid
- Normally open
- Normally closed

2x 3/2-way valve

- Single solenoid
- Normally open
- Normally closed
- 1x normally closed, 1x normally open
- Mechanical spring
- Pneumatic spring

5/2-way valve

- Single solenoid
- Pneumatic/mechanical spring
- Mechanical spring
- Pneumatic spring
- Double solenoid valve

5/3-way valve

- Mid-position pressurised
- Mid-position exhausted
- Mid-position closed

Cover caps for manual override

- Closed cover cap, covered manual override
- Slotted cover cap, non-detenting manual override
- Cover cap for detenting actuation without tools

Inscription label holders

Inscription label holders ASLR-D-L1 for identifying the valves and as a covering for the manual override.

Inscription label holders

Inscription label holders ASCF-H-L1-... for identifying the valves on the valve terminal VTUG

Key features – Pneumatic components

Manifold rail

For sub-base valves

The sub-base valves are supplied with external pilot air. The pilot air is set via the manifold rail. The scope of delivery of the manifold rail includes a short and a long blanking plug for setting the pilot air.

- For sub-base valves M5/M7 (size 10), G1/8 (size 14)
- For 2x 3/2-way, 3/2-way, 5/2-way and 5/3-way valves
- 4 to 24 valve positions with electrical links

Key features

Electrical connection

Multi-pin plug connection

The signals are transmitted from the controller to the valve terminal via a pre-assembled or self-assembled multi-wire cable to the multi-pin plug connection.

This substantially reduces installation time compared to individually connected valves. The valve terminal can be equipped with max. 48 solenoid coils.

Versions:

- Sub-D connection
- Ribbon cable

I-Port interface

Festo-specific interface as a basis for bus nodes (CTEU) or in IO-Link® mode for direct connection to a higher-order IO-Link master.

Communication and power supply take place via a common M12 interface.

Connection options:

- As I-Port interface for bus nodes (CTEU)
- In IO-Link® mode for direct connection to an IO-Link master

Supply plate

For additional air supply and exhaust via a valve position (ports for duct 1, 3 and 5).

Note

The supply plate VABF-L1-14-P3A4-G18-T1 can only be used with G fittings. R fittings are not permissible.

Cover plate for vacant position

Vacant position cover

Separator for pressure zones

For creating multiple pressure zones in a valve terminal

Key features – Pneumatic components

Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold rail and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VTUG.

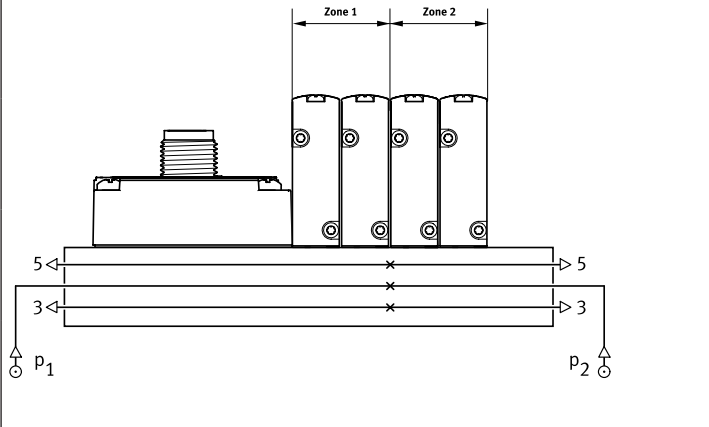

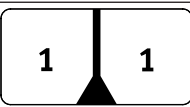

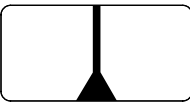

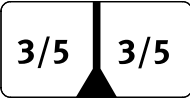

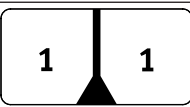

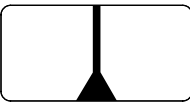

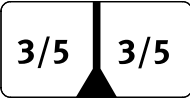

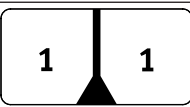

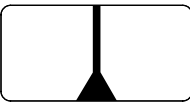

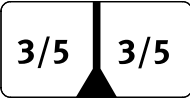

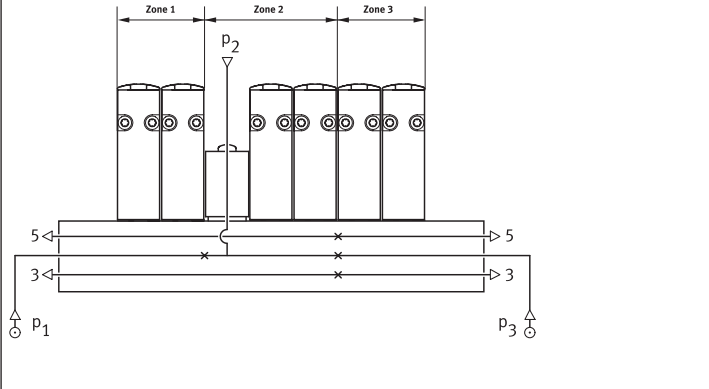

A pressure zone is created by separating the internal supply ducts using a separator.

Pressure zone separation can be used for the following ducts:

- Duct 1
- Duct 3
- Duct 5

Note

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/air supply for each pressure zone
- Pressure zone separation is not possible in duct 12/14 (pilot air supply)

Duct separation	Description						
	<p>The pressure zones can be freely configured with the VTUG. The following duct separations are possible:</p> <table border="1" data-bbox="833 808 1513 1137"> <tr> <td data-bbox="833 808 1173 913">Duct 1 closed</td> <td data-bbox="1179 808 1369 913">  </td> </tr> <tr> <td data-bbox="833 922 1173 1028">Duct 1, 3, 5 closed</td> <td data-bbox="1179 922 1369 1028">  </td> </tr> <tr> <td data-bbox="833 1037 1173 1137">Duct 3, 5 closed</td> <td data-bbox="1179 1037 1369 1137">  </td> </tr> </table>	Duct 1 closed		Duct 1, 3, 5 closed		Duct 3, 5 closed	
Duct 1 closed							
Duct 1, 3, 5 closed							
Duct 3, 5 closed							
	<p>The number of pressure zones with the VTUG is limited by the number of valve positions on the manifold rail. Note that each supply plate occupies one valve position.</p>						

Separator VABD

[1] Separator VABD

Note

With the VTUG, several pressure zones can be created by mounting separators (VABD). The separators are inserted in the manifold rail using a slotted screwdriver.

Key features – Pneumatic components

Pilot air supply

Internal pilot air supply

Internal pilot air supply can be chosen with an operating pressure between 1.5 ... 8 bar, 2.5 ... 8 bar, or 3 ... 8 bar (depending on the valve used).

The pilot air supply is branched from duct 1 (compressed air supply) using an internal connection.

External pilot air supply

External pilot air supply is required for vacuum operation or operating pressures above 8 bar. The port for external pilot air supply (port 12/14) is located on the manifold rail.

Pilot exhaust air

The pilot air is exhausted via duct 82/84 of the manifold rail.

Pilot air supply

- [1] Blanking plug, short, for internal pilot air
- [2] Blanking plug for duct 12/14 with internal pilot air
- [3] Blanking plug, long, for external pilot air
- [4] Push-in fitting for duct 12/14 with external pilot air

The manifold rails have an internal connection between duct 12/14 and duct 1. By inserting a blanking plug into this connection, it is possible to switch between internal and external pilot air.

Key features – Pneumatic components

Operation with different pressures

Vacuum operation

Points to note with 3/2-way valves with pneumatic spring return:

The 3/2-way valves are available in a design with two valves in one valve body and with pneumatic spring return. With these valves, the force for the return movement is obtained from port 1.

Vacuum operation is only possible at port 3 and 5, not at port 1. With external pilot air supply, vacuum can be connected at port 1, 3, 5 of the 5/2-way and 5/3-way valves.

Vacuum operation is not possible when using the shut-off function (hot swap).

Reverse operation

The 3/2-way valves with pneumatic spring are not suitable for reverse operation, since at least the minimum pilot pressure must be present in duct 1.

Note

Pressure must be present at port 1.

Pressure divider (internal pilot air)

- Two different pressures are required
- Different pressures can be connected at duct 1, 3 and 5

Advantages

Any pressure or vacuum can be connected at duct 3 and 5 both with external and internal pilot air

Note

- With internal pilot air, adhere to the minimum pilot pressure in duct 1
- With 2x 3/2-way valves without spring return, to the minimum pilot pressure in duct 1

Vacuum, ejector pulse and normal position

Vacuum, ejector pulse and normal position with internal pilot air can be achieved by connecting vacuum at duct 3 and pressure for the ejector pulse at duct 1.

Key features – Pneumatic components

Standard nominal flow rate q_{nN} as a function of the number of switched valves n

Size 10 mm, 5/2-way valves

Size 14 mm

Key features – Pneumatic components

Pilot pressure p_2 as a function of operating pressure p_1

2x 3/2-way valve, mechanical spring return

2x 3/2-way valve, pneumatic spring return

3/2-way single solenoid valve and 5/2-way single solenoid valve

Key features – Mounting

Valve terminal mounting

Sturdy terminal mounting via:

- Four through-holes for wall mounting
- H-rail mounting
- Mounting bracket

Use the M5 thread provided on the manifold block for earthing the valve terminal.

Wall mounting

Screw the valve terminal VTUG onto the mounting surface using four M4 screws.

The mounting holes are on the left and right side of the manifold rail.

H-rail mounting

Clip the valve terminal VTUG onto the H-rail (see arrow [1]).

Swivel the valve terminal onto the H-rail and secure in place with the clamping element (see arrow [2]).

Attach the manifold rails to a rail to EN 60715-TH35 using the H-rail mounting VAME-T-M4.

Use the following screws for mounting (to DIN 912):

- Size 10: M4x30
- Size 14: M4x40

Permissible use of the H-rail:

- Manifold rail with outlet on the side or on top.
 - H-rail exclusively for horizontal mounting.
 - Vibration/shock loads are not permissible for this type of mounting.
- Size 14:
- Use H-rail type TH35-7.5 for valve terminals with a maximum of 8 valve positions.
 - Use H-rail type TH35-15 for mounting in accordance with the standard and for more than 8 valve positions.

Key features – Mounting

Manual override (MO)

MO with automatic return (non-detenting)

- [1] Press in the plunger of the MO with a pointed object or screwdriver. The pilot valve switches and actuates the main valve.
- [2] Remove the pointed object or screwdriver. The spring force pushes the plunger of the manual override back. The pilot valve returns to its normal position as does the main single solenoid valve (not the case with double solenoid valve code).

MO with locking (detenting)

- [1] Press in the plunger of the MO with a pointed object or screwdriver until the valve switches and then turn the plunger 90° clockwise until the stop is reached. The valve remains actuated
- [2] Turn the plunger 90° anti-clockwise until the stop is reached and then remove the pointed object or screwdriver. The spring force pushes the plunger of the manual override back. The valve returns to its normal position (not with double solenoid valve code).

MO non-detenting – with coded cover cap

MO is actuated by pushing it with a pointed object or screwdriver and reset by spring force (detenting position prevented by coded cover cap).

MO detenting without tools – mounting

Turn MO to clip it onto the pilot valve. The cap for the MO can then be operated (detenting) without tools.

MO detenting without tools – actuation

Sliding the cap for the MO with latch in the direction of the arrow results in:

- Cap locks into the end position
- The pilot valve switches and actuates the main valve.

MO detenting without tools – actuation

Sliding the cap for the MO with latch in the direction of the arrow results in:

- Cap locks into the end position
- The spring force pushes the plunger of the manual override back.
- The pilot valve returns to its normal position as does the main single solenoid valve (not the case with double solenoid valve code).

Key features – Mounting

Inscription system

Inscription label holders

- [1] Inscription label holders
ASCF-H-L1 (code TT)
- [2] Inscription field

Mount the inscription label holders to label the valves. Open the inscription label holder to insert the inscription label and actuate the manual override. The inscription label holders are available in different sizes depending on the number of valve positions.

Note

Do not engage the manual override before mounting the inscription label holder. When mounted, the retaining bracket for the inscription label holder covers the manual override of the valves beneath it. The manual override for the two valves under the retainers of the inscription label holder can then only be operated as non-detenting.

Inscription label holders

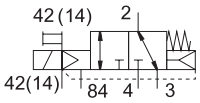

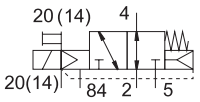

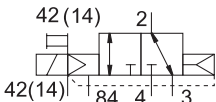

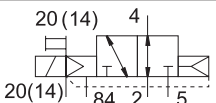

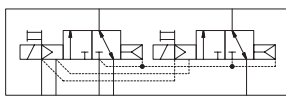

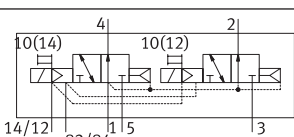

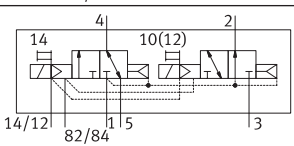

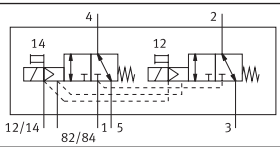

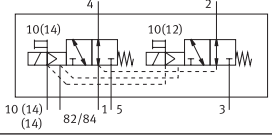

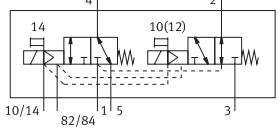

- [1] Inscription label holders
ASLR-D-L1 (code TV)

Use inscription label holders ASLR-D-L1 (code TV) to label individual valves. The inscription label holder is placed directly on the manual override.

Note

Do not engage the manual override before mounting the inscription label holder. After the retaining brackets are fitted, the manual override can only be operated as non-detenting.

Overview of valve functions

Datasheet – Multi-pin plug connection

The following multi-pin plug connections are available for the valve terminal VTUG:

- Sub-D (25-pin)
- Sub-D (44-pin)
- Ribbon cable (26-pin)
- Ribbon cable (50-pin)

Electrical multi-pin

Each pin on the multi-pin plug can actuate exactly one solenoid coil.

If the maximum configurable number of valve positions is 24, this means that 48 valve functions can be addressed.

The valves can be switched using positive or negative logic (positive switching or negative switching).

Mixed operation is generally not possible; however, an exception is made for the V22 ... V25 variants with 25-pin Sub-D. With these variants, a specific range of valve positions (e.g. Com 16...19) is supplied with common voltage.

This allows these ranges to be switched with positive or negative logic and valve groups to be switched off independently of the other ranges. Mixed operation within a range is not permitted.

- Note

A double solenoid valve occupies one valve position and two pins on the multi-pin plug. This means that the number of double solenoid valves per manifold rail is limited. (Pin allocation → page 36)

Datasheet – I-Port interface/IO-Link®

Festo-specific, standardised interface for direct connection to the fieldbus by mounting the bus node CTEU or to an IO-Link master via a cable (in IO-Link mode).

I-Port interface/IO-Link®

Versions:

- I-Port interface for bus nodes (CTEU)
- IO-Link® mode for direct connection to a higher-level IO-Link master

The following protocols are supported in connection with the associated

CTEU bus node:

- CANopen
- DeviceNet
- PROFIBUS
- CC-LINK
- EtherCAT
- AS-Interface
- PROFINET
- EtherNet/IP
- VARAN
- Festo installation system CPI

The electrical supply/transmission of communication takes place via an M12 plug.

The valve terminal can be equipped with 4 ... 24 (double solenoid) valves.

Datasheet – CAPC

Function

The electrical connection block CAPC enables the decentralised installation of bus nodes CTEU on a valve terminal or input modules with I-Port interface.

Area of application

- M12 connection technology (two interfaces)
- Enables the installation of valve terminals or other devices over a distance of 20 metres
- Accessory CAFM enables the connection block to be installed on an H-rail

General technical data

Type	CAPC-F1-E-M12	
Dimensions W x L x H	[mm]	50 x 148 x 28
Fieldbus interface		2x M12 socket, 5-pin
Operating voltage range	[V DC]	18 ... 30
Max. power supply	[A]	2
Nominal operating voltage	[V DC]	24
Product weight	[g]	85

Part no. Type

Electrical connection block

For connecting a second device with I-Port interface

570042

CAPC-F1-E-M12

H-rail mounting

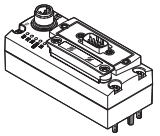

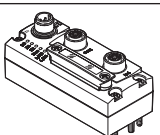

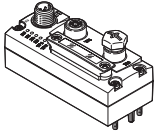

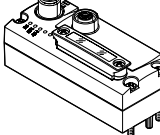

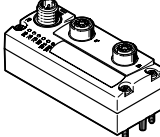

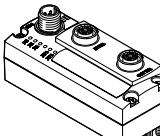

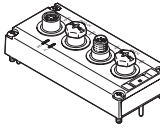

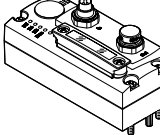

For electrical connection block CAPC

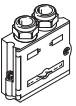

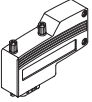

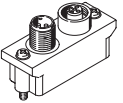

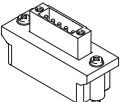

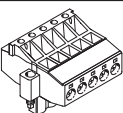

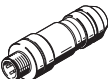

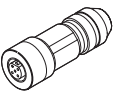

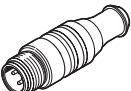

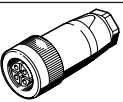

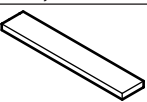

570043

CAFM-F1-H

Accessories – Valve terminal

Ordering data – CTEU					
		Description	Part no.	Type	
Bus node					
	CANopen bus node		570038	CTEU-CO	
	CC-Link bus node		1544198	CTEU-CC	
	PROFIBUS bus node		570040	CTEU-PB	
	DeviceNet bus node		8107588	CTEU-PB-EX1C	
	EtherCAT bus node		570039	CTEU-DN	
			572556	CTEU-EC	
	EtherNet/IP bus node		2798071	CTEU-EP	
			8107591	CTEU-EP-EX1C	
	AS-Interface bus node		572555	CTEU-AS	
	PROFINET RT bus node		2201471	CTEU-PN	
			8107589	CTEU-PN-EX1C	
	VARAN bus node		8087559	CTEU-VN	
Electrical interface					
	For direct integration of the valve terminal into the decentralised IO system CPX-API		12 valve positions	8081922	VAEM-L1-S-12-AP
			24 valve positions	8081923	VAEM-L1-S-24-AP
	For direct integration of the valve terminal into the decentralised CPI installation system from Festo		2149714	CTEU-CP	

Accessories – Valve terminal

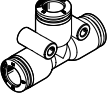

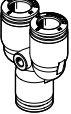

Ordering data – CTEU			
	Description	Part no.	Type
Bus connection			
	Sub-D plug, straight	For CANopen	532219 FBS-SUB-9-BU-2x5POL-B
		For CC Link	532220 FBS-SUB-9-GS-2x4POL-B
		For PROFIBUS	532216 FBS-SUB-9-GS-DP-B
	Sub-D plug, angled, 9-pin	For CANopen	533783 FBS-SUB-9-WS-CO-K
		For PROFIBUS	533780 FBS-SUB-9-WS-PB-K
	M12x1, 5-pin	A-coded, for CANopen	525632 FBA-2-M12-5POL
		B-coded, for PROFIBUS	533118 FBA-2-M12-5POL-RK
	For 5-pin terminal strip for CANopen	525634	FBA-1-SL-5POL
	Terminal strip, 5-pin, for DeviceNet/CANopen	525635	FBSD-KL-2x5POL
	Plug, straight, M12x1	5-pin, for CANopen	175380 FBS-M12-5GS-PG9
		4-pin, D-coded for EtherCAT	543109 NECU-M-S-D12G4-C2-ET
		5-pin, compatible with FBA-2-M12-5POL-RK for PROFIBUS	1066354 NECU-M-S-B12G5-C2-PB
	Straight socket, M12x1, 5-pin, for assembling a connecting cable compatible with FBA-2-M12-5POL-RK for PROFIBUS	1067905	NECU-M-B12G5-C2-PB
	Terminating resistor, M12, B-coded for PROFIBUS	1072128	CACR-S-B12G5-220-PB
Plug socket			
	For power supply, M12x1, 5-pin, B-coded for CANopen/DeviceNet	538999	NTSD-GD-9-M12-5POL-RK
	For power supply, M12x1, 5-pin for CC-Link, PROFIBUS, EtherCAT	18324	FBSD-GD-9-5POL
Inscription label			
	For bus node	565306	ASLR-C-E4

Accessories – Valve terminal

Accessories – Valve terminal

Ordering data		Description	Part no.	Type	PU ¹⁾	
Cover plate						
	Vacant position width 10 mm	Recommended for production facilities for manufacturing lithium-ion batteries	8141537	VABB-L1-10-T-F1A	1	
	Vacant position width 14 mm	Recommended for production facilities for manufacturing lithium-ion batteries	8141538	VABB-L1-14-T-F1A	1	
Supply plate						
	Supply ports 1, 3, 5, width 10 mm	Recommended for production facilities for manufacturing lithium-ion batteries	8141539	VABF-L1-10-P3A4-M7-T1-F1A	1	
	Supply ports 1, 3, 5, width 14 mm	Recommended for production facilities for manufacturing lithium-ion batteries	8141540	VABF-L1-14-P3A4-G18-T1-F1A	1	
Separator						
	For manifold rail, size 10, M5/M7	For sub-base valves	Recommended for production facilities for manufacturing lithium-ion batteries	8145478	VABD-6-B-F1A	1
		For semi in-line valves		8145479	VABD-8-B-F1A	1
	For all manifold rails, size 14		Recommended for production facilities for manufacturing lithium-ion batteries	8145480	VABD-10-B-F1A	1
	For all manifold rails, size 18		Recommended for production facilities for manufacturing lithium-ion batteries	8145481	VABD-12-B-F1A	1
H-rail mounting				Datasheets → Internet: vame		
	Use the following screws for mounting: Size 10: DIN 912: M4x30 Size 14: DIN 912: M4x40	Recommended for production facilities for manufacturing lithium-ion batteries	8142649	VAME-T-M4-F1A		
Mounting bracket				Datasheets → Internet: vame		
	Mounting bracket, right and left, with screw set for sub-base valve (control cabinet installation). Mounting is possible only with VTUG in size 10 and 14.		8154010	VAME-L1-Q		

1) Packaging unit.
