

Pneumatic valves VUWG

FESTO

Key features

Innovative

- Various connection sizes (M3, M5, M7, G1/8, G1/4)
- Max. pressure 10 bar
- 2x3/2-way valve in one valve housing

Versatile

- Wide range of valve functions
- In-line valves can be used as individual valves or manifold valves
- M5/M7 in-line valves can be mixed on one manifold rail
- Identical sub-base valves for M5 or M7 manifold rail
- Manifolds with pressure zones
- Choice of quick push-in connections

Reliable

- Sturdy and durable metal components
 - Valves
 - Manifold rails
- Reliable servicing thanks to valves that can be replaced quickly and easily

Easy to mount

- Secure mounting on wall or H-rail
- Easy mounting thanks to captive screws and seals

Key features – Pneumatic components

Individual valves and valve manifold assemblies

VUWG-L in-line valve as individual valve

VUWG-S in-line valve for manifold assembly

VUWG-S valve manifold assembly consisting of in-line valves

VUWG-B sub-base valve for manifold assembly

VUWG-B valve manifold assembly consisting of sub-base valves

VUWG basic valves

- Width 10, 14 and 18 mm
- 2x 3/2-way, 5/2-way and 5/3-way valves
- In-line valves
- Sub-base valves

Key features – Pneumatic components

Manifold rail for in-line valves

- For in-line valves M3, M5, M7, G1/8 and G1/4, width 10/14/18
- For 2x 3/2-way, 5/2-way and 5/3-way valves
- 2 to 10 and 12, 14, 16 valve positions

Manifold rail for sub-base valves

- For sub-base valves 10A, 10, 14 and 18, width 10/14/18
- Manifold rail with M3, M5/M7, G1/8 and G1/4 working ports
- For 2x 3/2-way, 5/2-way and 5/3-way valves
- 2 to 10, 12, 14 and 16 valve positions
- The sub-base valves are supplied with pilot air for the pneumatic spring via the manifold rail. A short (for internal pneumatic spring supply) and long (for external pneumatic spring supply) blanking plug are included with the manifold rail for this purpose.

 **Note**

Duct 84 must not be sealed by a blanking plug when connecting a sub-base valve.

Cover plate for vacant position

For covering vacant valve positions

Supply plate

For additional air supply and exhaust via a valve position

Separator for pressure zones

For creating multiple pressure zones

Pilot pressure p₂ as a function of operating pressure p₁

This graph applies to the 2x3/2-way valves and 5/2-way monostable valves with pneumatic spring:

- T32CA, T32UA, T32HA
- M52A, M52R

 **Note**

The compressed air for the pneumatic springs is supplied from port 1 (operating pressure). To ensure the valve switches reliably, the minimum pressure as per the graph must always be adhered to for the pilot pressure.

Key features – Pneumatic components

Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold rail and supply plates. The position of the supply plates and duct separations can be freely selected with the VUWG.

Pressure zones are created by isolating the internal supply ducts between the manifold sub-bases by appropriate duct separation.

Pressure zone separation can be used for the following ducts:

- Duct 1
- Duct 3
- Duct 5

Note

- Use separators if the exhaust air pressures are high
- Use at least one supply plate/air supply for each pressure zone

Duct separation	Description	Symbol
	<p>The pressure zones can be freely configured with the VUWG. The following duct separations are possible:</p> <ul style="list-style-type: none"> • Duct 1 closed • Duct 1/3/5 closed • Duct 3/5 closed 	
	<p>The number of pressure zones with the VUWG is only limited by the number of valve positions on the manifold rail. Note that each supply plate occupies one valve position.</p>	

Separator VABD

Note

As the separators are fitted from only one side using a slotted screwdriver, several pressure zones can be created in one profile.

Key features – Pneumatic components

Flow control valve

- [1] Valve
- [2] Flow control valve
- [3] Fitting

Flow control valve can be fitted in port 1, 3/5 and/or in port 2/4.

Operation with different pressures

Vacuum operation

The following points need to be observed with vacuum operation:

- M52 in-line valves with pneumatic spring and pneumatic/mechanical spring return (vacuum only at 3/5)
- T32 valves with pneumatic spring return (vacuum only at 3/5)

If external pilot air via duct 14 is used, M52 sub-base valves (B) can be used without restriction.

The remaining valve types can be used without restriction for vacuum.

Reverse operation

The valves with pneumatic spring are not suitable for reverse operation, since at least the minimum pilot pressure must be present in duct 1.

 **Note**

Pressure must be present at port 1.

Pressure divider (internal pilot air)

- If two different pressures are required.

- Different pressures can be supplied at duct 1, 3 and 5.

 **Note**

- With internal pilot air, adhere to the minimum pilot pressure in duct 1
- With 2x 3/2-way valves without spring return, adhere to the minimum pilot pressure in duct 1

Any pressure or vacuum can be connected at duct 3 and 5 both with external and internal pilot air.

Vacuum, ejector pulse and normal position

Vacuum, ejector pulse and normal position with internal pilot air can be realised

by connecting vacuum at duct 3 and pressure for the ejector pulse at duct 1.

6) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

7) If several valves are to be screwed together via the through-holes to form a block, a minimum distance of 0.3 mm must be ensured by inserting spacers.
