Fieldbus Direct

FESTO

Key features

The system

- Extremely compact and space-saving design
- Low-cost solution for connecting of a small number of valves to a fieldbus
- Extremely safe, protection class up to IP65 depending on the series.

The Fieldbus Direct system comprises the following valve terminal series.
- CPV

The Fieldbus Direct product range is the most compact way of connecting valves to a fieldbus. The bus node is directly integrated in the electrical actuation of the valve terminal and therefore takes up only a minimal amount of space.

Fieldbus Direct is a system for connecting a valve terminal. The most important systems are covered.

The CP string extension option enables the functions and components of the CPI installation system to be used.

The optional string extension allows additional valve terminals and I/O modules to be connected to the bus node of the Fieldbus Direct system.

The I/O modules and cables for the CP string extension are ordered using the order code for the installation system CPI.

The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on site. All of the required electrical signals are transmitted via the CPI cable, which means that no further installation is needed on the extension module.

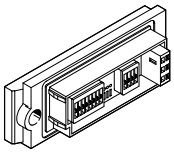
Valve terminal configurator online at: ➔ www.festo.com

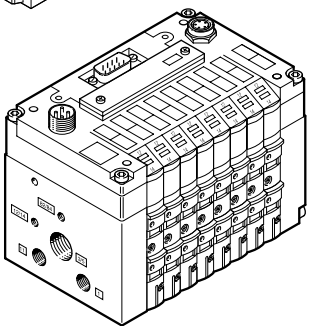
A valve terminal configurator is available online to help you select a suitable valve terminal.
Like all valve terminals, Fieldbus Direct is ordered using an ID code. This ident. code specifies the valve functions, the number of valves, vacant positions as well as the additional functions and the type of compressed air supply.
As is the case with all Festo products, all valve terminals are supplied:

- Fully pre-assembled
- Equipped with fittings on request
- Tested for electrical function
- Tested for pneumatic function
- Securely packaged
- User documentation can be downloaded free of charge

Key features

Switch module for CPV Direct





The bus parameters and the device configuration for the CPV Direct are set using the removable switch module.

The integrated DIL switches are easy to set and control even if the installation location is difficult to access.

In the case of valve terminals with the CP system to specification "B", the DIL switches are integrated into the basic unit of the electrics for parameterisation and configuration.

CP string extension

The optional string extension allows an additional valve terminal and I/O modules to be connected to the Fieldbus Direct bus node. A CP string of the CP installation system is integrated in the bus node as an extension. Different input and output modules as well as CPV, MPA-S, CPV-SC valve terminals can be connected.

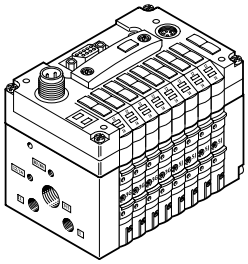
The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on site. All the required electrical signals are transmitted via the CP cable, which in turn means that no further installation is needed on the extension module.

The CP string interface offers:
- 16 input signals
- 16 output signals for output modules 24 V DC or solenoid coils
- Logic and sensor supply for the input modules
- Load voltage supply for the valve terminals
- Logic supply for the output module

In the variant to specification "B",
- 32 inputs
- 32 outputs 24 V DC or solenoid coils can be connected.

The CP modules without specification "B" can of course also be connected to valve terminals CPI string extension.

CPV Direct with bus node



- 8 valve slices
- 16 solenoid coils
- 16 3/2-way valves

CPV Direct with input module for sensing cylinder end positions

- 8 valve slices with up to 16 solenoid coils
- 16 inputs M8 or M12, each with sensor supply

Variant according to specification "B"
- 32 input signals
- 32 output signals/solenoid coils

Key features – Bus connection

Fieldbus Direct system diagnostics

The bus node together with the modules connected to the CP string offer a range of diagnostics options.

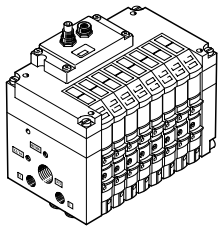
Diagnostic LEDs on the Fieldbus Direct node
The fieldbus-specific LEDs indicate the communication status and the fieldbus function.
Further LEDs indicate the power supply status of all connected modules as a common message.
- Undervoltage
- Short circuit
- Interruption of voltage

Diagnostic LEDs on the CP extension modules
The current status of the switching signals of the inputs or outputs are indicated by LEDs directly on the individual CP/CPI modules. Short circuit or overload of the power supply and communication faults on the CP connection are indicated via additional LEDs.

Diagnostic messages via the fieldbus
The CP connection is used for transmitting all available diagnostics information to the bus node. The complete device diagnostics can then be transmitted to the fieldbus master.
- Configuration error
- Short circuit/overload of an output module
- Short circuit/undervoltage of the sensor supply
- Undervoltage/load voltage of the valves
- CP string interruption to one of the CP modules

Valve terminals with CP interface

Valve terminal CPV

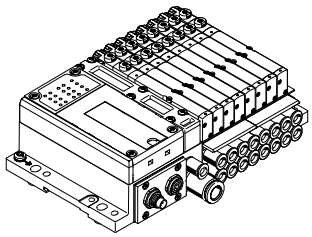


CPV10
CPV14
CPV18

- Max. 16 valves in 8 valve slices
- Highly compact and space-saving
- Width 10, 14, 18 mm
- Nominal flow rate 400/800/1600 l/min
- CPV10, CPV14 and CPV18 with CPI functionality

More information
→ Internet: cpv

MPA-S valve terminal



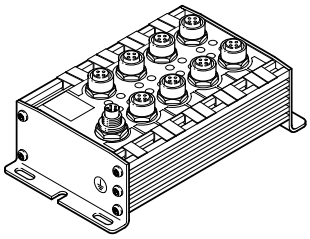
MPA1
MPA2

- Max. 32 valves
- Modular and versatile
- Width 10, 20 mm
- Nominal flow rate 360/700 l/min
- CPI functionality

More information
→ Internet: mpa-s

Peripherals overview

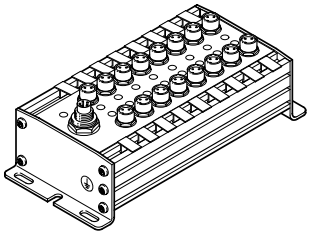
Input/output modules CP/CPI installation system



CP-E16-M12x2-5POL

- 16 inputs 24 V DC
- Signal status indication via 16 LEDs
- Operating status indication

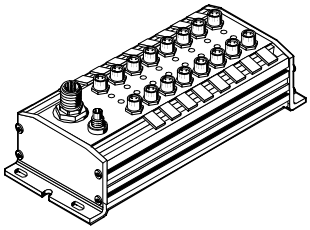
- M12 socket, double allocation
- 1x M9 CP/CPI connection
- PNP/NPN, IP65



CP-E16-M8

- 16 inputs 24 V DC
- Signal status indication via 16 LEDs
- Operating status indication

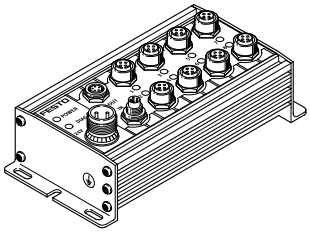
- M8 socket, single allocation
- 1x M9 CP connection
- PNP/NPN, IP65



CP-E16-M8-Z

- 16 inputs 24 V DC
- Signal status indication via 16 LEDs
- Operating status indication

- Galvanic isolation through additional power supply
- M8 socket, single allocation
- 1x M9 CP connection
- Separate sensor supply
- PNP/NPN, IP65



CP-A08-M12-5POL

- 8 outputs 24 V DC
- Output signal indication via 8 LEDs
- Operating status indication
- M12 socket, single allocation

- 2x M9 CP connection
- Separate load voltage
- Outputs resistant to overloads and short circuits
- PNP/NPN, IP65

Detailed description of input and output modules

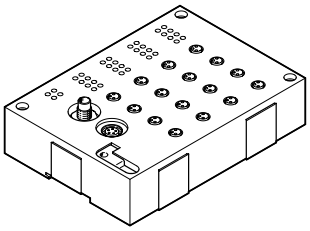
Peripherals overview

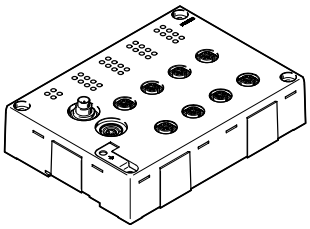
Input/output modules CP/CPI Eco Line



CP-E16-M8-EL

- 16 inputs 24 V DC
- Signal status indication via LEDs
- Operating status indication

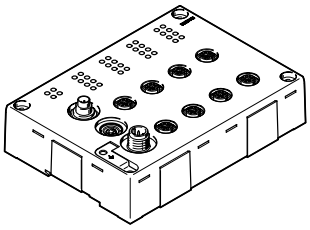
- 16 x M8 socket, 3-pin, double allocation
- 2x M9 CP connection
- PNP



CP-E16-M12-EL

- 16 inputs 24 V DC
- Signal status indication via LEDs
- Operating status indication

- 8x M8 socket, 5-pin, single allocation
- 2x M9 CP connection
- PNP



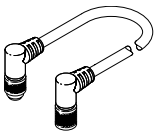
CP-A08-M12-EL-Z

- 8 outputs 24 V DC
- Signal status indication via LEDs
- Operating status indication

- 4 x M12 socket, 5-pin, double allocation
- 2x M9 CP connection
- Outputs resistant to overloads and short circuits
- PNP

Detailed description of input and output modules
➔ Internet: cpi

CP connecting cable



The CP string is connected using pre-assembled CP cables supplied in lengths of 0.5 to 8 metres.

Peripherals overview

Fieldbus systems for CPV Direct

Fieldbus variants:
Of more than 20 different fieldbus systems (protocols) on the market, a few have emerged as significant. Festo supports these with a range of bus nodes (FBxx) on the valve terminals. Fieldbus systems require a powerful central PLC and a master interface for each fieldbus.
Fieldbus systems are preferably used when it is necessary to control multiple devices that have many inputs/outputs, complex functions or highly complex communication. In this case, the benefits of simple cabling and convenient diagnostics and servicing outweigh the additional complexity of a fieldbus master interface and the know-how required.

Festo fieldbus
A fieldbus developed by Festo that offers simple user guidance and is supported by the controllers of the FPC, SF and IPC series (Festo FB5). A maximum of 98 bus stations can be connected to the Festo fieldbus. The bus can be operated with 4 different baud rates. 31.25, 62.5, 187.75 and 375 kbps.

PROFIBUS DP
An open fieldbus standard originally developed by Siemens and now in use worldwide. The bus can be operate with baud rates from 9.6 kBd to 12 MBd.

DeviceNet
Open fieldbus standard based on CAN technology, which was originally developed for the automotive sector.
DeviceNet was originally developed by Rockwell (Allen Bradley) and is now an open standard.

Moeller SUCONET K
A maximum of 98 bus stations can be connected to the SUCONET K fieldbus. Depending on the project design, bus length etc, the bus can be operated at a baud rate of 187.5 or 375 kbps. The bus interface is based on RS 485 with a master/slave structure.

ABB CS31
The fieldbus from ABB connects a maximum of 63 fieldbus stations with the fieldbus master. The data is transmitted at a constant baud rate of 187.5 kbps. The protocol is suitable for use in the entire range of automation technology

Key features – Electrical connection

Operating voltage and load current supply

The operating voltages for the Fieldbus Direct valve terminal and for the extension modules are connected centrally via the 4- or 5-pin M12 plug.
The operating voltages are required for the bus node electronics and the modules connected to the CP string.
The load supply for the valves is supplied separately from the supply for the electronic unit.
The valves of the Fieldbus Direct valve terminals and the valves/outputs on the CP string extension are supplied together via pin 2 of the M12 plug.
The power supply for the connected input module sensors are normally also supplied via the M12 plug. Up to 500 mA for the sensor supply to the connected input module is provided via the CP string.

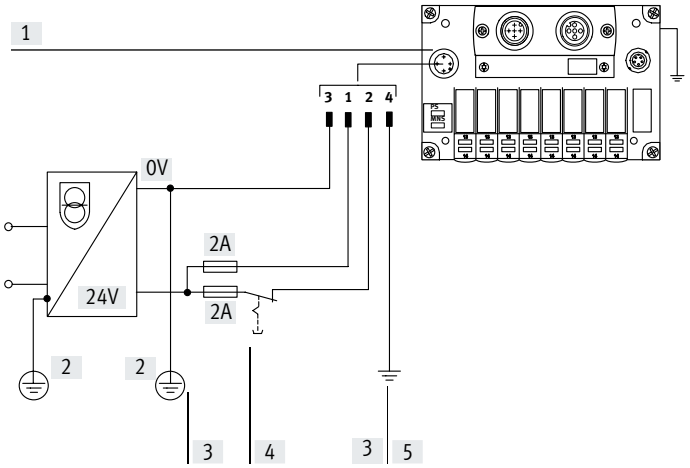
A separate, galvanically isolated sensor supply is provided for the input module CP-E16-M8-Z. A max. current of 2 A is available to the sensors here.

Since, in addition to communication, the entire power supply to the connected modules is routed via the CP string, this offers a very installation-friendly option for extension.

The following functions are supported via the CP string:
- Connection for data exchange
- Power supply for the connected modules
- Sensor voltage supply of up to 500 mA
- Load voltage supply for the connected valves

The electrical modules are protected against overload with electronic fuses. All the diagnostics are transmitted to the bus node via the CP string, where it is forwarded to the PLC according to the specific protocol.

Circuitry example for CPV Direct – Connection of load voltage



[1] Connection for power supply on the CPV Direct valve terminal
[2] Protective earthing (PE)
[3] Equipotential bonding
[4] Load voltage can be switched off separately and external fuse
[5] Earth terminal on pin 4, configured for 3 A

Pin allocation – Power supply for CPV Direct

	Pin	Designation	Information
	1	24 V DC electronics and sensors	The voltage is supplied via a 4-pin M12 plug (A-coded).
	2	24 V DC valves and outputs	
	3	0 V electronics and sensors	
	4	Earth terminal	

Datasheet – Bus node CPV-DI01

CPV bus node for communication between a CPV valve terminal and a fieldbus master. It controls a CPV valve terminal with 8 valve slices and 16 solenoid coils and their signal status indication via LED. The valves CPV-... are controlled by an automatic current reduction, which reduces the energy demand and heat output. 16 digital inputs and 8 digital outputs or 16 valves can be connected via a serial CP string extension.

DI01 supports 4 different fieldbus protocols, which are selected using DIL switches:

- PROFIBUS DP
- Moeller SUCOnet K
- ABB CS31
- Festo fieldbus

The CPV bus node is available in three sizes with identical features:

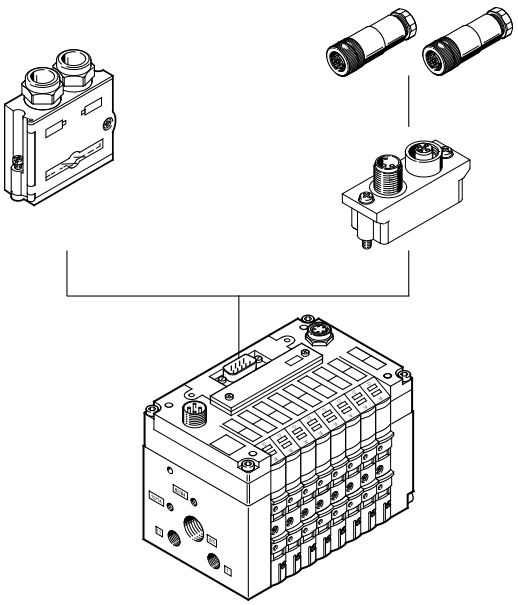
- CPV10
- CPV14

Application

Bus connection

Sub-D socket

M12 adapter



Sub-D socket

- 9-pin Sub-D socket
- Installation with IP65 protection

The bus connection is established via a 9 pin Sub-D socket with a typical PROFIBUS allocation (to EN 50 170). The bus connector plug (with protection class IP65 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable. An active bus terminal can be connected using the integrated DIL switch. The Sub-D interface is designed for activating network components via a fibre optic cable connection.

M12 adapter

- Plug connector 2xM12
- Installation with IP65 protection

Alternatively, the bus connection can be established via a 2xM12 adapter (B-coded).

Datasheet – Bus node CPV-DI01

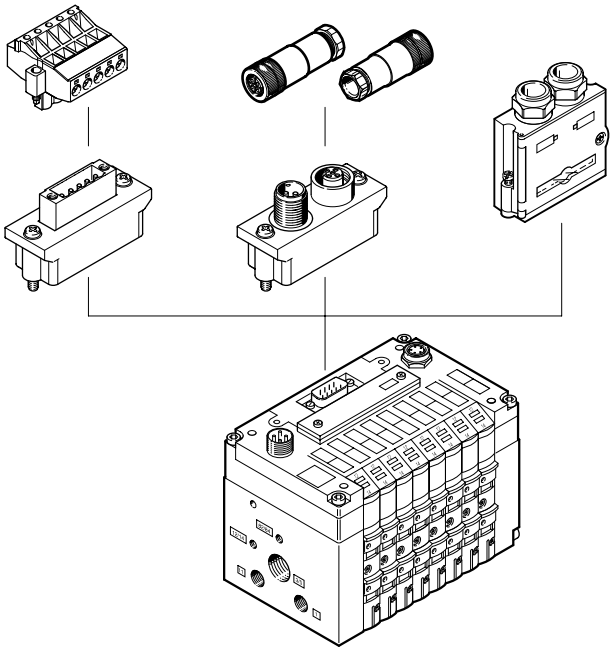
Datasheet – Bus node CPV-DI02-8

CPV bus node according to the CP system with specification "B" for communication between a CPV valve terminal and a fieldbus master. It controls a CPV valve terminal with 8 valve slices and 16 solenoid coils and their signal status indication via LED. The valves CPV-... are controlled by an automatic current reduction, which reduces the energy demand and heat output. 32 digital inputs and 32 digital outputs or 32 solenoid coils can be connected via a serial CP string extension.

The CPV bus node is available in three sizes with identical features:
- CPV10
- CPV14

Application
Bus connection

Sub-D socket **M12 adapter**



Sub-D socket
- 9-pin Sub-D socket
- Installation with IP65 protection

The bus connection is established via a 9 pin Sub-D socket with a typical PROFIBUS allocation (to EN50170). The bus connector plug (with protection class IP65 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable. An active bus terminal can be connected using the integrated DIL switch. The Sub-D interface is designed for activating network components via a fibre optic cable connection.

M12 adapter
- Plug connector 2xM12
- Installation with IP65 protection

Alternatively, the bus connection can be established via a 2xM12 adapter (A-coded).

Screw terminals
5-pin screw terminal strip for installation in protected environments (IP20). The bus connection is established via a 5-pin row. If the valve terminal is ordered with this bus connection, the 5-pin screw terminal strip is supplied with it. It is designed with dual screw terminals for the incoming and outgoing bus cables. This connection technology provides a T-distributor function.
