

## Handling modules HSP

**FESTO**

## Key features at a glance

### Range of application

The handling module is a new generation of function modules for the automatic transfer, feed and removal of small parts in extremely confined spaces. This is achieved via a force-guided vertical and horizontal motion sequence. A backlash-free cross guide with recirculating ball bearing elements ensures high precision and good rigidity. The combination of semi-rotary drive and slotted guide results in a compact unit for a complete pick & place cycle.

### Special features

- Compact design
- Extremely short cycle times
- Low-cost
- Easy commissioning
- For payloads up to 1.6 kg
- Stroke adjustment along Y- and Z-axes
- Wait position modules possible
- No planning costs

### Product range overview – Three drive variants to choose from

		Pneumatic: HSP-...-AP, with semi-rotary drive DSM	Pneumatic: HSP-...-AS, with drive shaft
<b>Advantages</b>			
		<ul style="list-style-type: none"> <li>• Fast</li> <li>• Low cost</li> <li>• Ready-to-install</li> <li>• No project engineering required</li> <li>• Easy commissioning</li> </ul>	<ul style="list-style-type: none"> <li>• Compact</li> <li>• Can be used universally</li> <li>• Variable drive interface</li> <li>• On request: Drive options in combination with servo motors</li> </ul>
<b>Technical data</b>			
Stroke	Y [mm]	52 ... 170	
	Z [mm]	20 ... 70	
Min. cycle time	[s]	0.6 ... 1.0	Dependent on drive
Payload	[g]	0 ... 1600	
Repetition accuracy at end positions	[mm]	±0.02	
Buffer		Max. 2	Dependent on drive
Function of wait position module		Pulling with spring-return cylinder	Dependent on drive
Repetition accuracy in wait positions	[mm]	< 1	Dependent on drive
Data sheet		→ Page 7	→ Page 16

## Application examples

### HSP...-AP, pneumatic

Linear transfer

- Rapid feeding and removal, e.g. at the linear transfer or at the rotary indexing table

Positioning parts on a belt

- Fast positioning of parts on a belt

### HSP...-AS, without drive

Linear transfer

- Compact tandem pick & place at the linear transfer

Rotary indexing table, linear transfer

- Fast and flexible pick & place with servo motor EMMT-AS
- Electric variant using third-party motor

Peripherals overview

## Peripherals overview

Accessories	Description	→ Page/Internet
[1] Handling module HSP	Standard module without accessories	7
[2] Adapter kit HAPG	Interface for grippers, semi-rotary drives, etc.	18
[3] Semi-rotary drive DSM	Pneumatic drive, adapted to each size	dsm
[4] Installation kit MKRP	Conduit to protect electrical cables and tubing	19
[5] Wait position module BWL-/BWR-HSP	With pneumatic drive: Function for pulling the swivel arm back out of the working area	19
[6] Cover kit BSD-HSP	To protect against accidental contact	19
[7] Adapter kit	Interface between HSP and gripper	gripper
[8] Gripper	Parallel/three-point/radial/angle grippers can be attached to the HSP. The appropriate gripper for every application	gripper
[9] Suction cup with connection	Appropriate suction cup for every application	suction cup
[10] Proximity switch SME-/SMT-8	Sensing option for end positions	20
[11] Non-return and flow control valve GRLA	For setting the speed of pneumatic drives	grla
– Slot nut HMBN	For mounting the handling module	20

20 ... 70 mm

**General technical data**

Type	HSP...AP
Pneumatic connection	M5
Mode of operation	Double-acting
Design	Semi-rotary drive
	Cross guide
	Force-guided motion sequence
Cushioning	Shock absorbers at both ends, soft characteristic curve
Position sensing	Via proximity switch
Type of mounting	With through-hole
	Via slot nuts
Mounting position	Guide rail, vertical/horizontal

**Operating and environmental conditions**

Type	HSP...AP
Operating medium	Compressed air to ISO 8573-1:2010 [7:-:-]
Note on operating/ pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)
Operating pressure [bar]	4 ... 8
Ambient temperature [°C]	0 ... +60

Size	12	16	25	
<b>Y direction</b>				
Stroke [mm]	52 ... 68	90 ... 110	130 ... 170	
<b>Z direction</b>				
Stroke [mm]	Z	20 ... 30	35 ... 50	50 ... 70
Working stroke	Za	5 ... 15	5 ... 20	5 ... 25

**Forces [N]**

Size	12	16	25
<b>Z direction</b>			
Effective force at 6 bar	40	50	65
<b>Y direction</b>			
Permissible process force	30	35	50

## Data sheet

Weights [g]			
Size	12	16	25
HSP-...-AP	1900	3300	6400
HSP-...-AP-SD	2600	4600	7600
HSP-...-AP-SD-WR	2800	4800	8100
HSP-...-AP-SD-WL	2800	4800	8100

### Repetition accuracy [mm]

For low-vibration operation, the payload should be mounted as close as possible to the guide rail of the handling module.

Repetition accuracy is ensured if the payload (adapter plate, semi-rotary drive and/or gripper, gripper fingers, workpiece) is mounted within the mounting surface of the adapter kit HAPG.

Size	12	16	25
Repetition accuracy at end positions	±0.01	±0.01	±0.02

### Travel times $t$ as a function of payload $m$ while maintaining repetition accuracy

The travel time  $t$  is taken to be the time the handling module requires to travel from one end position to the other and back.

The payload  $m$  is taken to be the mass fastened on the vertical guide rail (e.g. adapter, gripper, semi-rotary drive and workpiece).

**Note**  
It is possible to obtain higher speeds with the same mass by limiting repetition accuracy.

— HSP-12-AP  
 ..... HSP-16-AP  
 - - - HSP-25-AP

### Cycle times [s]

The cycle time  $t_t$  is the sum of the travel time  $t$  and the dwell time  $t_e$  in the end positions.

$t_t = \text{travel time } t + \text{dwell time } t_e$   
 The minimum cycle time must be complied with.

Size	12	16	25
Min. cycle time	0.6	0.8	1.0

### Example for HSP-12-AP

- |   |  |  |  |
|---|--|--|--|
| <p>Step 1:<br/>The following values are assumed:<br/>Payload <math>m = 0.15</math> kg<br/>Dwell time <math>t_e = 2 \times 50</math> ms<br/>(50 ms per end position)</p> | <p>Step 2:<br/>The travel time can be determined from the graph:<br/><math>t = 400</math> ms</p> | <p>Step 3:<br/>This gives us a cycle time:<br/><math>t_t = 400 \text{ ms} + 100 \text{ ms} = 500 \text{ ms}</math></p> | <p>Step 4:<br/>The table shows a minimum cycle time of 600 ms. This means that the movement needs to be throttled.</p> |
|---|--|--|--|

Data sheet

Permissible static/dynamic characteristic load values

Cross guide

**Note**  
The torques apply to the centre of the guide carriage.

**Combined load**

The torque equation for the combined load must be satisfied:

$$\frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

M1 = dynamic value  
M2 = maximum value

**Dynamic characteristic load values**

Size	12	16	25
Max. torques [Nm] M <sub>xperm.</sub> , M <sub>yperm.</sub> , M <sub>zperm.</sub>	1.1	2.4	3.2

**Combined load**

The torque equation for the combined load must be satisfied:

$$\frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

M1 = static value  
M2 = maximum value

**Static characteristic load values**

Size	12	16	25
Max. torques [Nm] M <sub>oxperm.</sub> , M <sub>oyperm.</sub> , M <sub>ozperm.</sub>	5	10	15

## Data sheet

### Stroke adjustment

#### Y stroke:

Once the HSP is mounted, the Y stroke of the pick & place position can be adjusted independently of each other.

#### Z stroke:

Differences in height, for example between a rotary indexing table and a transfer system, can be compensated even after mounting.

Y-axis (horizontal)

Z-axis (vertical)

#### Procedure:

- [1] Loosen the screws
- [2] Adjust the guide using the adjusting screw (guide must always rest against the guide rail)
- [3] Tighten the screws

#### Procedure:

- [1] Loosen the lock nut
- [2] Set the desired Z stroke using the set screw
- [3] Tighten the lock nut

## Data sheet

### Wait position module

Application and mode of operation

Figure 1

Figure 2

Circuit diagram for HSP with wait position module

- [1] The handling module HSP is in the right-hand end position. The actuating cylinder is advanced in its initial position.
- [2] When the handling module reaches the left-hand end position, the 5/3-way valve is reset. (Figure 1)
- [3] When retracting, the actuating cylinder pulls the handling module upward into its wait position. The operating area is then free. (Figure 2)
- [4] From the wait position, it can be swivelled either into the initial position or into the other end position.

 **Note**

In combination with the wait position module, the handling module HSP must be controlled using a 5/3-way valve (normally open). The actuating cylinder is controlled using a 5/2-way valve. The actuating cylinder can only be used for pulling.

Size	HSP-12	HSP-16	HSP-25
Max. Z stroke of wait position module	15	25	25
