

Suction cup with connection OGVN

FESTO

Characteristics

At a glance

The two-component suction cup OGVN has a sturdy design and the sealing lips lie smoothly against the workpiece, making it abrasion-resistant and able to compensate for unevenness. The suction cup consists of two different hardness ranges, but is made from the same polyurethane material.

- Excellent at holding corrugated, porous or leaky surfaces such as cardboard, plastic parts and composite materials with irregular surfaces.
- Can be used in applications with lifting forces parallel to the surface.

Metals with copper, zinc or nickel as the main constituent are excluded from use. Recommended for production plants for manufacturing lithium-ion batteries.

[2] Double nipple NPFC-D		8
[3] Vacuum security valve ISV	The vacuum security valves are designed to maintain the vacuum in applications where several suction cups are used and one or more suction cups fail.	8
[4] Length compensator VAL	Workpieces are handled gently thanks to compensation for a possible overstroke of the handling device or for compensating for tolerance differences in the workpiece thickness.	8
