Linear drives SLM, with guide

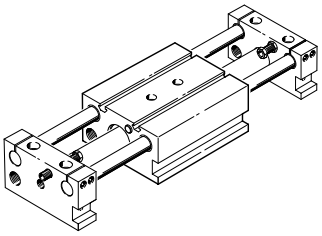
Key features

Version

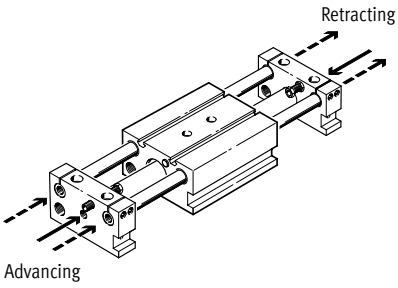
The linear drive SLM is a combination of a slide unit and a rodless linear drive.
The drive moves the slide. The movement is transferred via a magnetic coupling.
The modular system enables customised end-position cushioning and end-position sensing solutions.

Basic unit

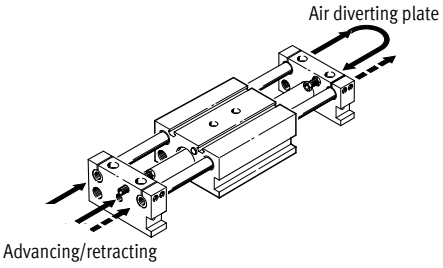
SLM-...-G



SLM-...-GL
With hollow guide rods



SLM-...-GU
With hollow guide rods, air diverting plate and supply port on one side



Standard unit

SLM-...-S
With two self-adjusting shock absorbers and two inductive proximity switches with PNP output
