Characteristic load values at the gripper jaws

The indicated permissible forces and torques apply to a single gripper jaw. Static forces and torques relate to additional applied loads caused by

the workpiece or external gripper fingers, as well as forces which occur during handling. The zero co-ordinate

line (gripper jaws point of rotation) must be taken into consideration for the calculation of torques.

The indicated opening and closing

The grippers must be throttled for
greater applied loads. Opening and
closing times must then be adjusted
accordingly.
