

Modular electrical terminal CPX

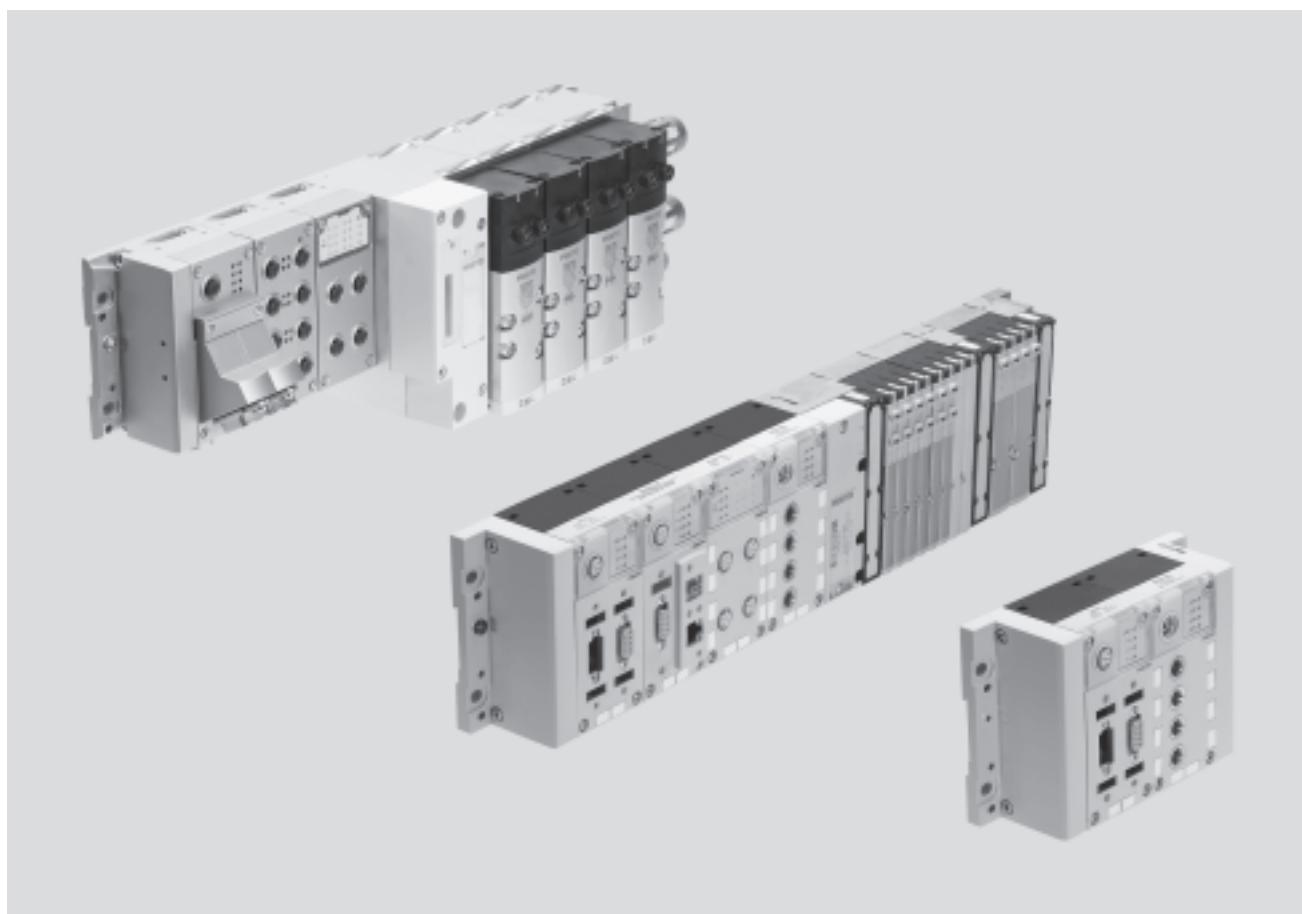

FESTO

Terminal CPX

Key features

FESTO

Key features

Installation concept

- Choice of multiple valve terminal types for different applications:
 - Type 03 MIDI/MAXI
 - Type 12 CPA
 - Type 32 MPA
 - Type 44/45 VTSA/VTSA-F
- Economical from the smallest configuration up to the maximum number of modules
- Up to 9 electrical input/output modules plus bus nodes and pneumatic interface/electronics modules for valves
- Extensive range of functions and connection options for the electrical modules
- Selectable connection technology for technically and economically optimised connections
- Can be used as a dedicated remote I/O module

Electrical

- High operating voltage tolerance ($\pm 25\%$)
- Choice of M18 or 7/8" connection for power supply
- Open to all common fieldbus protocols and Ethernet
- Optional function and technology modules for pre-processing
- IT services and TCP/IP such as remote maintenance, remote diagnostics, web server, SMS and e-mail alert
- Digital inputs and outputs, 4-fold/8-fold/16-fold, optionally available with individual channel diagnostics
- Analogue inputs and outputs, 2-fold/4-fold
- Temperature inputs
- IP65 and IP67 or IP20

Mounting

- Wall or H-rail mounting, also on mobile systems
- Conversions/extensions are possible at any time, individual linking with CPX metal design
- Modular system offering a range of configuration options
- Fully assembled and tested unit
- Lower costs for selection, ordering, assembly and commissioning thanks to the central CPX terminal
- Design of optimised control loop systems thanks to selectable pneumatic components
- Decentralised, subordinate installation system CPI improves cycle times by up to 30%
- Safe and convenient earthing thanks to earthing plate

Operation

- Fast troubleshooting thanks to an extensive selection of LEDs (some of which are multi-coloured) on the bus node and on all I/O modules
- Supports module and channel-oriented diagnostics
- On-the-spot diagnostics in plain text via handheld device
- Fieldbus/Ethernet remote diagnostics
- Innovative diagnostic support with integrated web server/web monitor or maintenance tool with USB adapter for PC
- Optimised commissioning thanks to parameterisable functions
- Reliability of service with connection blocks and modules that are quick to replace without changing the wiring

Terminal CPX

FESTO

Key features

Pneumatic variants of the CPX terminal

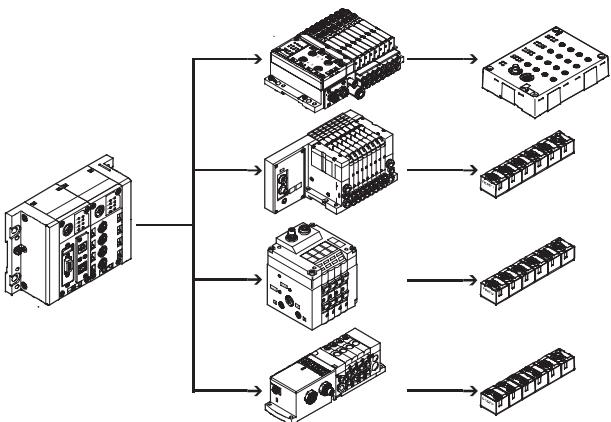

The electrical CPX terminal is a modular peripheral system for valve terminals.

The system is specifically designed so that the valve terminal can be adapted to suit different applications.

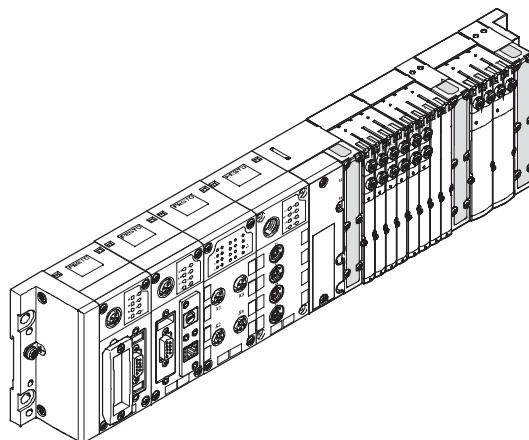

The modular system design lets you configure the correct number of

valves, inputs and additional outputs to suit the application.

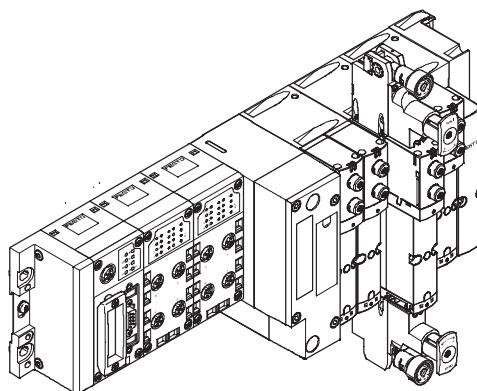

With valve terminal – decentralised

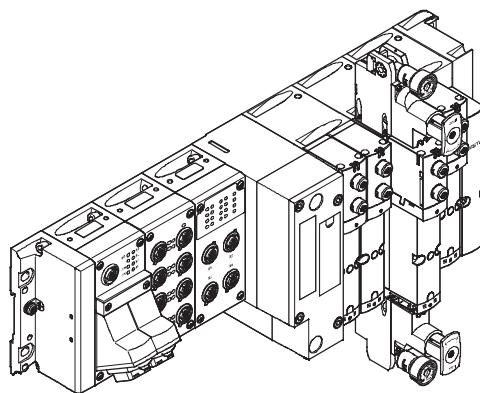

With valve terminal MPA – centralised

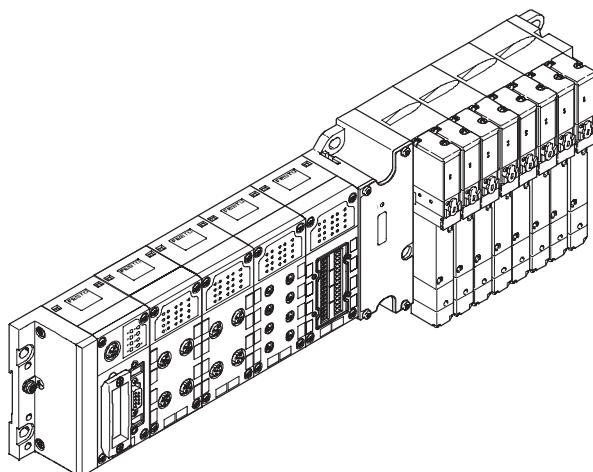

With valve terminal VTSA – centralised

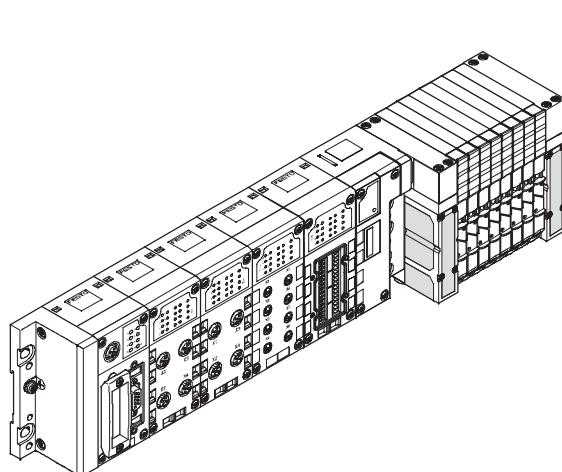

In metal version with valve terminal VTSA – centralised

With valve terminal MIDI/MAXI – centralised

With valve terminal CPA – centralised

Terminal CPX

Key features

FESTO

Variants of the CPX terminal controller (with fieldbus node, without pre-processing)

Fieldbus node

Different bus nodes are used for integration in the control systems of various manufacturers.

The CPX terminal can therefore be operated on over 90% of the most commonly used fieldbus systems:

- Profibus-DP
- Interbus

- DeviceNet
- CANopen
- CC-Link

Integration in universal networks based on Ethernet opens up new possibilities. Faster data transmission, real-time capability and

above all additional IT services such as file transfer, web servers, web monitor as integrated website inside the CPX terminal, SMS/e-mail alerts, etc. are opening up a wide range of synergies.

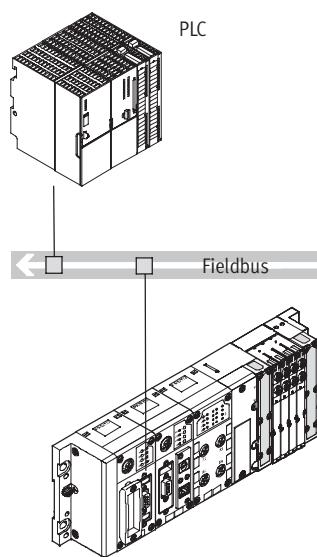

This incorporates standardised and universal communications technology

across all areas, including operating level, control level and field level with protection to IP 65/67.

The following protocols are supported:

- Ethernet/IP
- Modbus/TCP
- Profinet

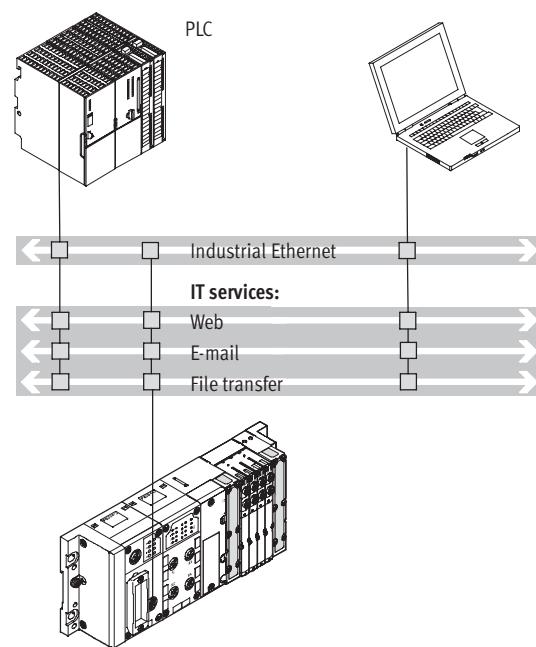

Fieldbus node

- Communication with higher-order controller via fieldbus
- No pre-processing

- Fieldbus protocol depending on CPX fieldbus node used
- Up to 512 I/Os, depending on the fieldbus node used

Fieldbus node Industrial Ethernet

- Connection to a higher-order controller directly via Ethernet/IP, Modbus/TCP or Profinet
- No pre-processing

- Monitoring via Ethernet and web applications
- Up to 512 I/Os

Note

Every electrical connection can be combined with an appropriate number of I/O modules and/or pneumatic components, depending on its address capacity.

Likewise, every pneumatic variant of the CPX terminal can be operated with every electrical connection variant.

Terminal CPX

FESTO

Key features

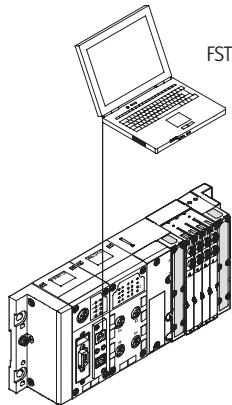

Variants of the CPX terminal controller (with pre-processing in the FEC)

Control block

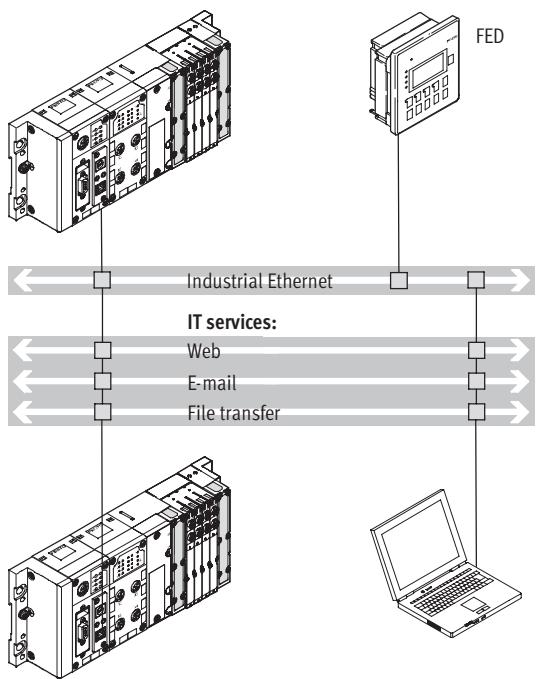

The optional Front End Controller CPX-FEC, in parallel with a fieldbus node, permits simultaneous access via Ethernet and an integrated web server, as well as autonomous pre-processing. Access via Modbus/TCP and EasyIP is also possible.

- Commissioning, programming and diagnostics using the Festo software tool FST 4.1 with hardware configurator.

With FEC in standalone mode

With FEC in Festo EasyIP mode

- Decentralised controller with direct machine mounting
- Interaction options via CPX-MMI or Front End Display (FED)
- Possibility of downloading programs via Ethernet (or via the programming interface)
- Supports full expansion of all CPX peripherals
- More than 300 I/Os

- Beneficial application areas:
 - Autonomous single workstations
 - Interlinked, standalone subsystems
 - Automation using IT technology

- Fast pre-processing of the CPX peripherals in the FEC
- Any data can be exchanged between the FEC via EasyIP
- Several FECs can be operated and monitored via one FED
- Remote diagnostics via an FED and CPX Web Monitor

- No higher-order controller is required
- More than 300 I/Os per CPX-FEC

Terminal CPX

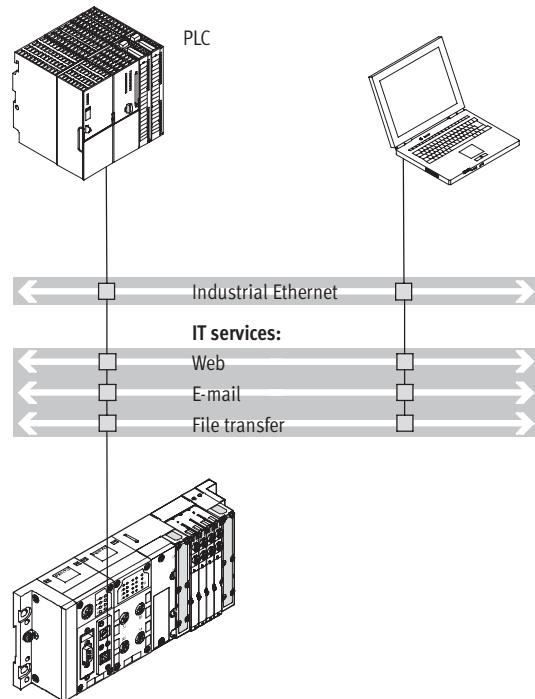

Key features

FESTO

Variants of the CPX terminal controller (with pre-processing in the FEC)

With FEC as remote controller on Ethernet

Remote controller on Ethernet as the pre-processing unit for decentralised, standalone subsystems using IT technology.

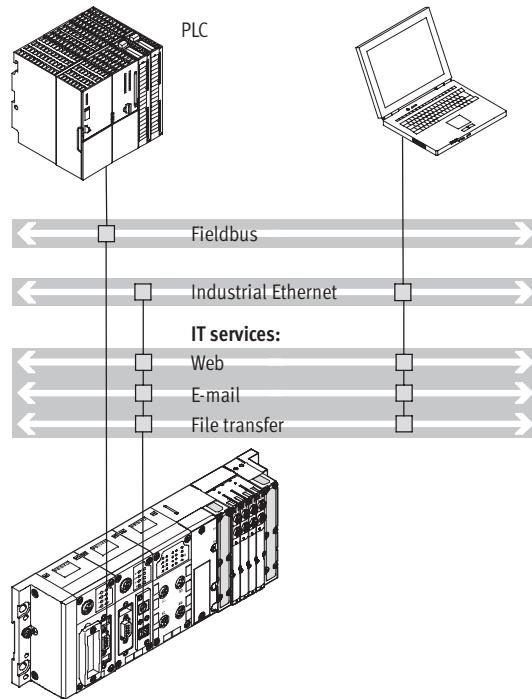

- Connection to a higher-order controller directly via Ethernet, no further fieldbus nodes are required
- Monitoring via Ethernet and web applications

- Pre-processing of the CPX peripherals through CPX-FEC
- More than 300 I/Os

With FEC as remote controller on fieldbus

Fieldbus remote controller (combination with fieldbus nodes for Interbus, Profibus-DP, Profinet, CANopen, DeviceNet or CC-Link) as the pre-processing unit for distributed, standalone subsystems.

- Fast pre-processing of the CPX peripherals in the FEC
- Communication with higher-order controller via fieldbus
- Optional additional monitoring via Ethernet and web applications
- Downloading of programs via programming interface
- More than 300 I/Os, fieldbus nodes are only used for communication with the higher-order PLC
- Two fieldbus nodes for redundant communication configuration

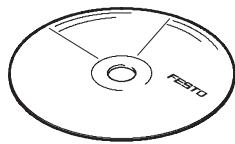

Terminal CPX

FESTO

Key features

CPX Web Monitor – Online diagnostics for the CPX terminal

What is a CPX Web Monitor?

The CPX Web Monitor is a software tool from Festo for all CPX modules with integrated web server and Ethernet connection:

- Supplied on CD-ROM
- Installation on PC
- Adaptable to application
- Loading via Ethernet to the web server of the CPX module

→ 55

What can a CPX Web Monitor do?

The Web Monitor dynamically visualises information about the CPX system and its modules via Ethernet in the browser of a PC:

- Status and diagnostics of the CPX system via modules and channels
- Status of the channels/valves

- SMS or e-mail alerts can be set
 - Reading of CPX error memory (fault trace)
 - Setting of outputs (force mode)
- Three password-protected access levels protect access to the CPX terminal.

How does the CPX Web Monitor communicate?

An IP address is assigned to the integrated web server. Depending on the performance of the connected Ethernet network, the CPX web server can be accessed from any PC.

Controllers or intelligent display and operating units can communicate with the CPX terminal.

What advantages does a CPX Web Monitor have?

- Expensive servicing is avoided
- Remote maintenance and monitoring of important device functions (counters) for the prevention of unjustified rights of recourse

- Preventive maintenance for reduced downtimes
- No engineering/no development of web applications

CPX Web Monitor – Application examples

Channel-oriented diagnostics

- Channel-specific status and error message of an I/O module
- Error message in "plain text" describing the type of error
- Exact error identified and appropriate service tasks available

Possible error messages:

- Short circuit
- Overload
- Open load
- Supply voltage below the tolerance limit

Monitoring of analogue values

- Channel-specific status and error message of an analogue I/O module
- Display in plain text
- Dynamic display of the current values at the inputs/outputs

Possible error messages:

- Open load
- Upper or lower limit value exceeded

Error memory (fault trace)

Quick access to the last 40 diagnostic results with timestamp.

Assistance in finding sporadic errors and statistical accumulations.

Plug and work with FEDs

The CPX Web Monitor can be implemented directly on all Festo touchpanels with the Windows CE operating system

- FED 710 with 7.5" TFT display
- FED 1010 with 10.4" TFT display
- FED 2010 with 12.1" TFT display
- FED 5010 with 15" TFT display

Convenient remote maintenance via Ethernet (TCP or Easy IP) is thus possible.

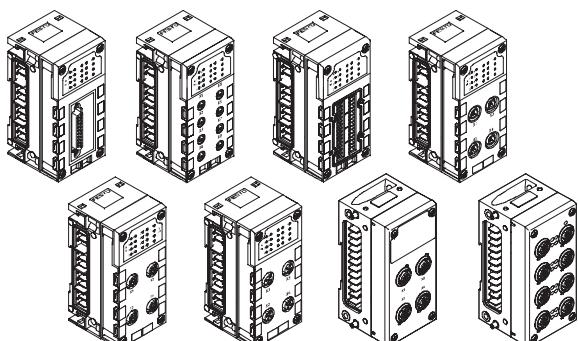

Terminal CPX

Key features

FESTO

Connection of inputs and outputs to the CPX terminal

Digital and analogue CPX I/O modules

Electrical connection

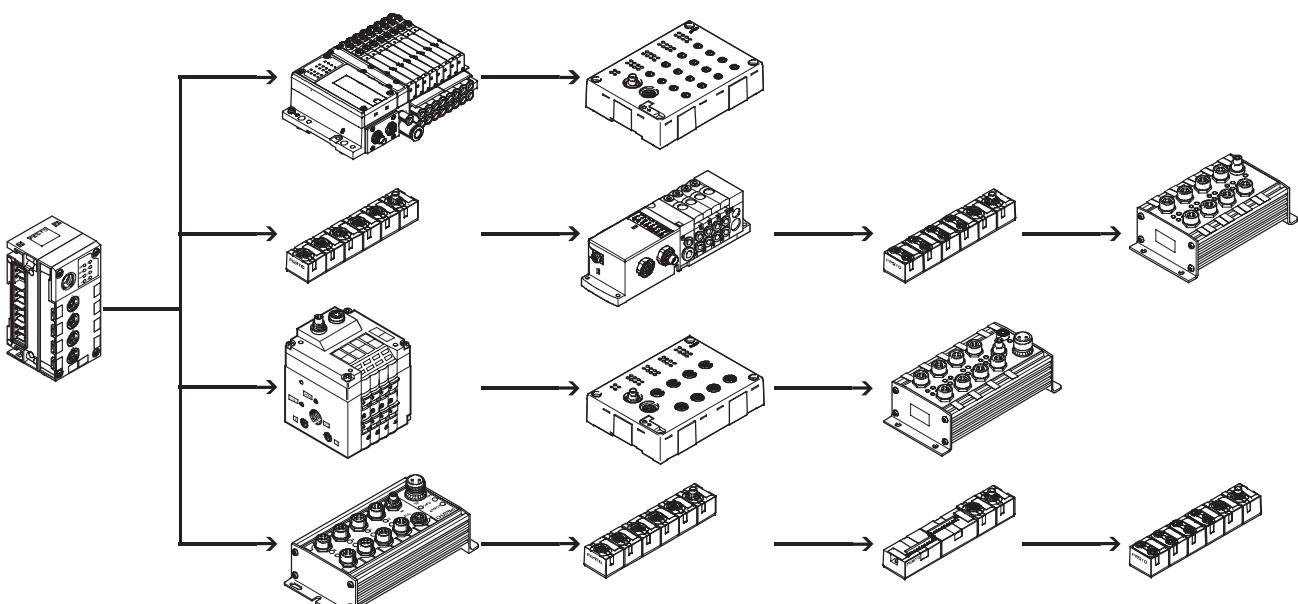

The connection technology for the sensors and additional actuators offers a wide range of digital and analogue input and output modules and is freely selectable – depending on your standards or application.

Connection blocks in plastic or metal can be freely combined:

- Metal version
 - M12-5-PIN

- Plastic version
 - M12-5-PIN
 - M12-5-PIN with quick lock and metal thread
 - M12-8-PIN
 - M8-3-PIN
 - M8-4-PIN
 - Sub-D
 - Harax®
 - CageClamp®
(with cover also for IP65/67)

With CPX-CP interface

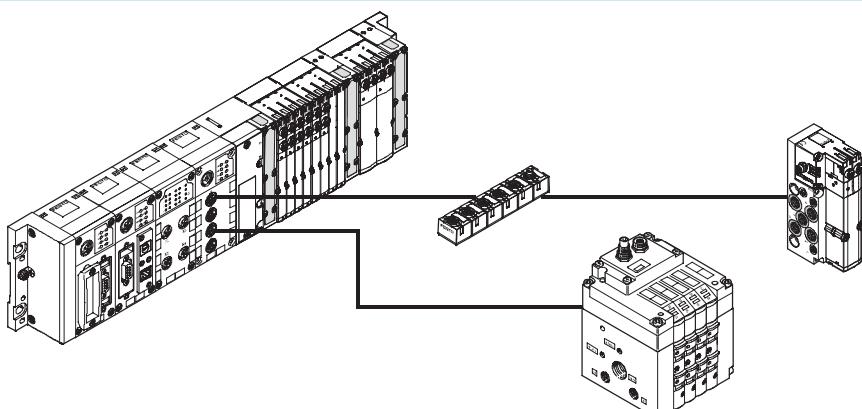

- Up to 4 strings per CP interface possible
- Up to 4 subordinate CP modules can be combined in a string

- Up to 32 I/Os can be connected per string
- Modules with M8, M12 and terminal connection

Several CP interface modules can be combined in one CPX terminal (depending on the controller used).

Combination of central CPX I/O modules and decentrally mounted I/O modules of the CPI installation system.

Combined centralised and decentralised connection (valve terminal with CP interface/output module)

- Can be scaled to different requirements within a system
- One control interface in the system, reduces installation complexity with concentrated and widely dispersed actuators
- Enables the implementation of an optimum electrical and pneumatic control loop system

Terminal CPX

FESTO

Key features

Ordering

The CPX terminal with valve terminal is fully assembled according to order specifications and individually tested. The finished valve terminal consists of the electrical peripherals including the desired actuation and the selected components of the VTSA (ISO), VTSA-F, CPA, MPA or MIDI/MAXI modules.

The CPX terminal with valve terminal is ordered using two separate order codes. One order code defines the electrical peripherals type CPX, while the other specifies the pneumatic components of the valve terminal.

The electrical peripherals type CPX can also be configured without a valve terminal and can be used on a field-bus. For this order, only the order code for the electrical peripherals is required.

The order lists for the pneumatic components can be found in

- Internet: type 44
(Valve terminal type 44 VTSA,
ISO 15407-2)
- Internet: type 45
(Valve terminal type 45 VTSA-F)
- Internet: type 12
(Valve terminal type 12 CPA,
Compact Performance)
- Internet: type 32
(Valve terminal type 32 MPA,
Modular Performance)
- Internet: type 03
(Valve terminal type 03
VIMP-/VIFB-03, multi-functional
MIDI/MAXI)

The order lists for the CP/CPI components can be found in

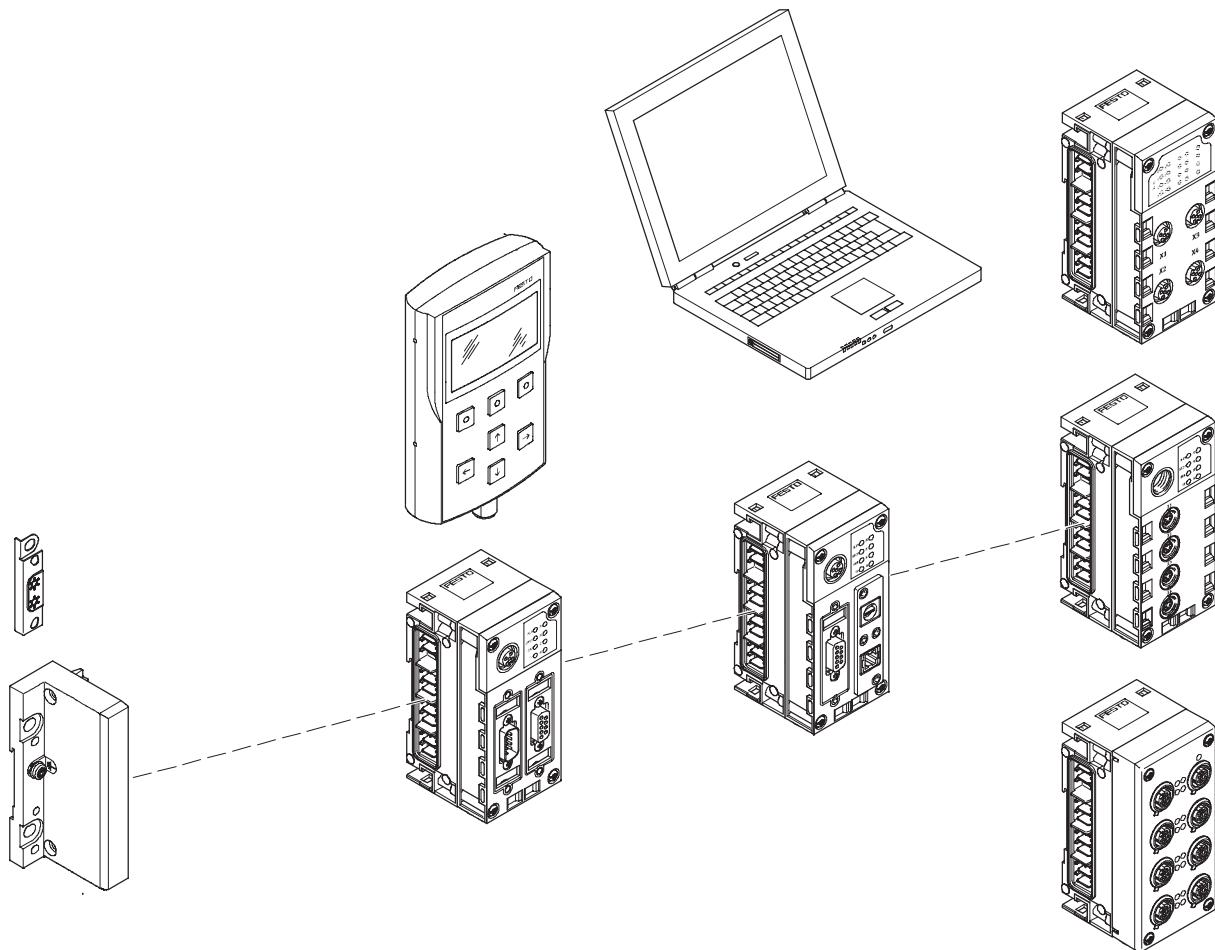

- Internet: cpi
(Installation system CPI)

Terminal CPX

Peripherals overview

FESTO

Complete overview of modules

End plate

- Mounting holes for wall mounting
- Functional earthing connection
- Special earthing plate for safe and easy connection to the machine bed or H-rail

Bus node

- Fieldbus/Industrial Ethernet connection using various types of connection technology
- Setting of fieldbus parameters via DIL switch
- Display of fieldbus and peripherals status via LED
- Profinet to AIDA standard in metal housing

Control block

- Pre-processing, autonomous controller or remote unit CPX-FEC
- Connection via Ethernet TCP/IP or Sub-D programming interface
- Setting of operating modes via DIL switch and program selection via rotary switch

Input/output modules

- Combination of
- Interlinking block
 - Electronics module
 - Connection block

Handheld control unit

- Connection to bus nodes or control block
- Display and modification of parameter settings
- Plain text display for texts, messages (e.g. individual channel diagnostics, condition monitoring), menus, etc.

Web Monitor

- Integrated website inside the CPX terminal
- Dynamic status display
- Online diagnostics
- SMS/e-mail alert

CP interface

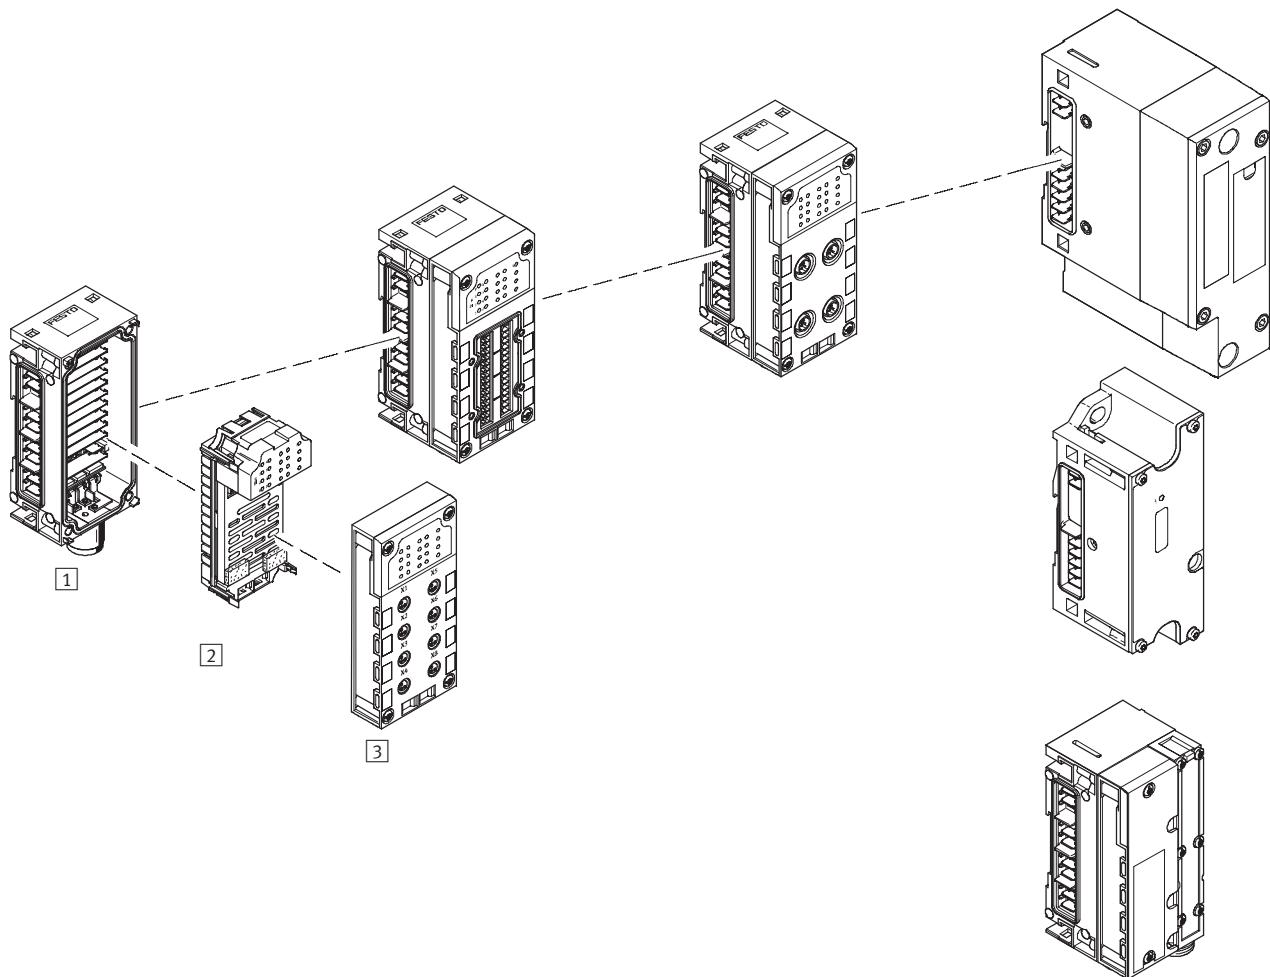

- CP interface for decentralised installation systems, thus optimising the pneumatic control loop system (short tubing lengths/short cycle times)
- Up to 4 strings with up to 4 modules each and up to 32 I/Os in total per string
- Power supply and bus interface via the same cable

Terminal CPX

Peripherals overview

FESTO

Complete overview of modules

Input/output modules

[1] Interlinking block

- Internal linking of the power supply and serial communication
- External power supply for the entire system
- Additional power supply for outputs or valves
- M18 or 7/8" connection accessories
- Plastic version: Linking with tie rods
- Metal version: Individual linking with M6 screws, individually expandable

[2] Electronics module

- Digital inputs for connecting the sensors
- Digital outputs for activation of additional actuators
- Analogue inputs
- Temperature inputs (analogue)
- Analogue outputs

[3] Connection block

- Selectable connection technology with 8 variants
- Protection class IP65/IP67 or IP20
- Freely combinable with the electronics modules
- M8/M12/Sub-D/quick connector
- M8/M12/Sub-D, etc. connecting cables
- Modular system for M8/M12 connecting cables
- M12 connection technology for the metal version

Pneumatic interface

- MPA1/2
- VTSA/VTSA-F
- MIDI/MAXI
- CPA10/14

Individual overview of modules

Digital electronics module for inputs/outputs

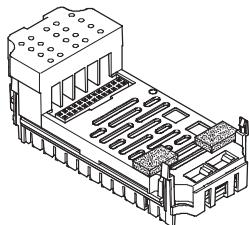

Digital inputs and outputs

- 4 digital inputs
- 8 digital inputs NPN
- 8 digital inputs PNP
- 8 digital inputs PNP with individual channel diagnostics
- 16 digital inputs
- 16 digital inputs with individual channel diagnostics
- 4 digital outputs (1 A per channel, individual channel diagnostics)
- 8 digital outputs (0.5 A per channel, individual channel diagnostics)
- 8 digital outputs (2.1 A/50 W lamp load per channel pair, individual channel diagnostics)

Multi I/O modules

- 8 digital inputs and 8 digital outputs

Analogue electronics module for inputs/outputs

Analogue inputs

- 2 analogue inputs (0 ... 10 V DC, 0 ... 20 mA, 4 ... 20 mA)
- 4 analogue inputs (0 ... 20 mA, 4 ... 20 mA)

Analogue temperature inputs

- 4 analogue inputs for measuring temperature (Pt100, Pt200, Pt500, Pt1000, Ni100, Ni120, Ni500, Ni1000)
- 4 analogue inputs for temperature sensing (thermocoupler and Pt1000 sensor for cold-position compensation)

Analogue outputs

- 2 analogue outputs (0 ... 10 V DC, 0 ... 20 mA, 4 ... 20 mA)

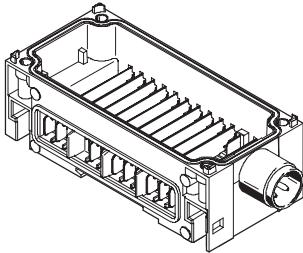

Terminal CPX

Peripherals overview

FESTO

Individual overview of modules

Plastic interlinking block – Linking using tie rods

System linking

- Different voltage values for supplying the modules
- Serial communication between the modules

System supply

- M18, 4-pin
- 7/8" 4- or 5-pin

In addition to system linking, power supply for the

- electronics plus sensors (16 A)
- valves plus actuators (16 A)

Additional power supply

In addition to system linking, power supply for the

- actuators (16 A per supply)

Power supply for the

- valves (16 A per supply)

Expandability

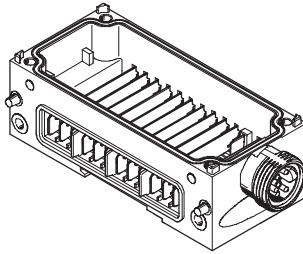

- Can be expanded to include an interlinking block with tie rod expansion CPX-ZA-1-E

Note

The max. current is limited to 12 A with the 7/8" system supply.

When using a conventional pre-assembled cable, the max. current is limited to 8 A.

Metal interlinking block – Individual linking

System linking

- Different voltage values for supplying the modules
- Serial communication between the modules

System supply

- 7/8" 5-pin

In addition to system linking, power supply for the

- electronics plus sensors (16 A)
- valves plus actuators (16 A)

Additional power supply

In addition to system linking, power supply for the

- actuators (16 A per supply)

Power supply for the

- valves (16 A per supply)

Expandability

- Can be expanded up to 10 interlinking blocks

Note

The max. current is limited to 12 A with the 7/8" system supply.

When using a conventional pre-assembled cable, the max. current is limited to 8 A.

Note

Interlinking blocks made from plastic (tie rods) and from metal (individual linking) cannot be combined due to the fact that they have different types of linking.

FESTO

Individual overview of modules

Pneumatic interface MPA

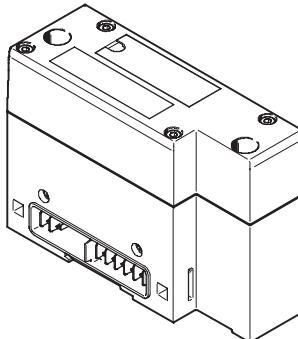

→ 145

- Valve terminal
- MPA1 (360 l/min)
 - MPA2 (700 l/min)
 - Up to 128 solenoid coils
 - Up to 16 modules can be configured
 - For CPX plastic version

Pneumatic interface VTSA/VTSA-F

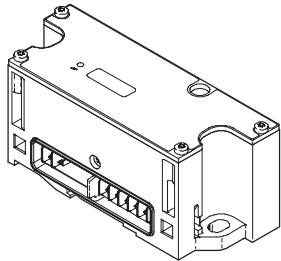

→ 146

- Valve terminal
- 18 mm: Valve flow rate up to 700 l/min
 - 26 mm: Valve flow rate up to 1,400 l/min
 - 42 mm: Valve flow rate up to 1,500 l/min
 - Max. 32 valve positions/max. 32 solenoid coils
 - For CPX plastic version
 - For CPX metal version

Pneumatic interface MIDI/MAXI

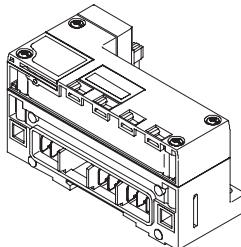

→ 147

- Valve terminal
- MIDI valves (500 l/min) and/or MAXI valves (1,250 l/min)
 - Up to 26 solenoid coils
 - Setting of the number of valves via DIL switch
 - For CPX plastic version
 - For CPX metal version

Pneumatic interface CPA

→ 149

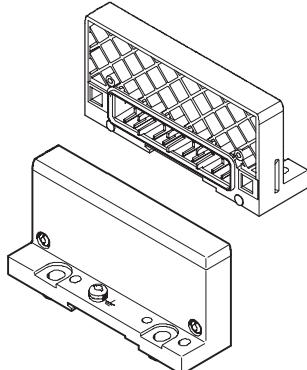

- Valve terminal
- CPA10 (300 l/min)
 - CPA14 (600 l/min)
 - Up to 22 solenoid coils
 - Setting of the number of valves via DIL switch
 - For CPX plastic version

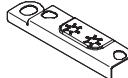

Plastic end plate

End plate

- Left-hand
- Right-hand (for use without valves)

Earthing plate (for plastic end plate)

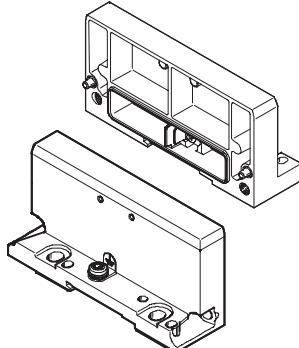

Earthing plate

- For safe and easy connection to the machine bed or H-rail, suitable for right-hand and left-hand end plate
- Assembly and earthing in a single processing step, which means:
 - 50% time saving
 - No additional material required

Metal end plate

End plate

- Left-hand
- Right-hand (for use without valves)

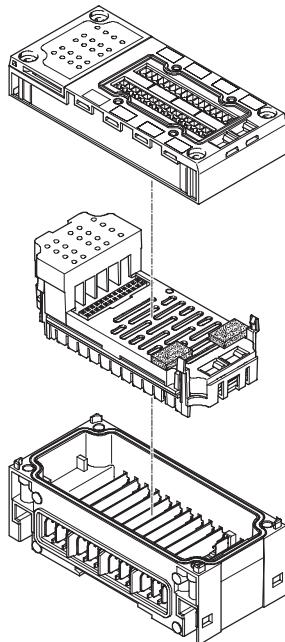

Terminal CPX

Peripherals overview

FESTO

General basic data and guidelines

Max. 11 modules in total:

- One bus node and/or one control block, freely positionable
- Up to 9 further input/output modules, freely positionable
- An additional pneumatic interface, always positioned as the last module on the right-hand side
 - For VTSA, VTSA-F, CPA and MIDI/MAXI:
fixed operating range, set using DIL switch
 - For MPA:
16 MPA modules can be configured
- Address capacity max. 512 inputs and 512 outputs, depending on bus node or control block

- One interlinking block with system supply, freely positionable

• Multiple interlinking blocks with additional power supply, always positioned to the right of the interlinking block with system supply

- The connection blocks can, with just a small number of exceptions, be freely combined with the electronics modules for inputs/outputs, also metal with plastic version (→ table below)
- All electronics modules for inputs/outputs can be combined with any interlinking block

• Interlinking blocks made from plastic (tie rods) and from metal (individual linking) cannot be combined due to the fact that they have different types of linking

Terminal CPX

Key features – Mounting types

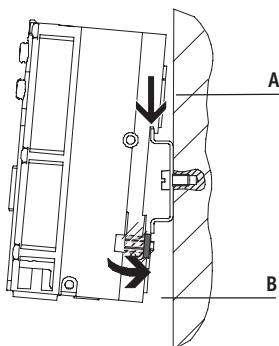

FESTO

Mounting options

Valve terminals with CPX terminal support different mounting methods for direct machine mounting with high

protection and control cabinet installation.

H-rail mounting

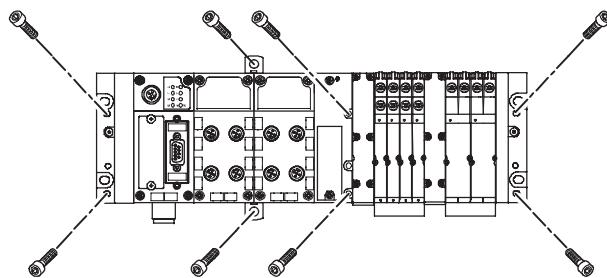

The H-rail mounting is formed in the reverse profile of the CPX interlinking blocks. The CPX terminal can be attached to the H-rail using the H-rail mounting kit. The CPX terminal is attached to the H-rail as follows (see arrow A).

It is first swivelled on the H-rail and then secured in place with the clamping component (see arrow B). The optional earthing plate allows a convenient working connection to be established to the machine potential/earth.

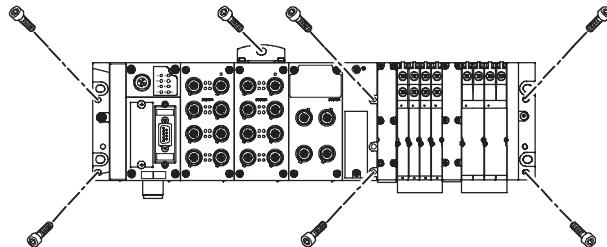

The following mounting kit is required for H-rail mounting:
• CPA-BG-NRH
This enables mounting of the CPX on H-rails to EN 60715.
An additional mounting kit is required for combination with valve terminals.

Wall mounting for plastic version

The end plates of the CPX terminal, the valve terminal and the pneumatic interface include mounting holes for wall mounting. For longer valve terminals, there are additional mountings for the CPX terminal. These mountings vary depending on the CPX terminal version (plastic or metal).

Wall mounting for metal version

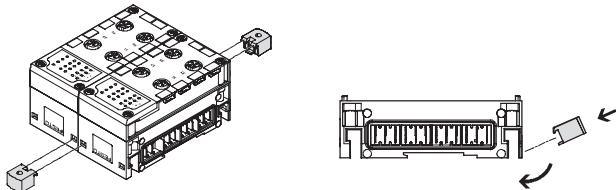

Terminal CPX

FESTO

Key features – Mounting types

CPX terminal in plastic version

Additional mountings

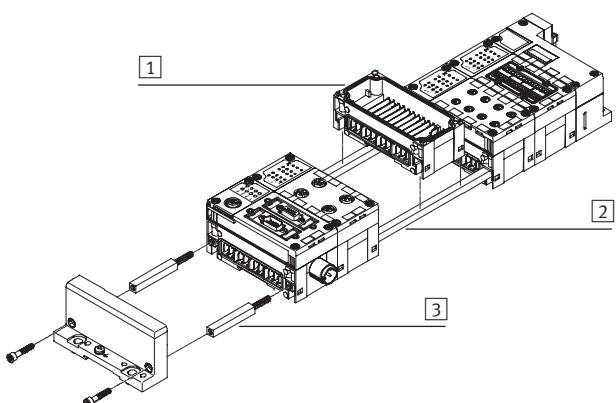

For longer valve terminals, there are additional mountings for the CPX terminal that can be fitted between two modules.

Note
In the case of CPX terminals with 4 and more interlinking blocks, additional mountings of type CPX-BG-RW... must be used approx. every 100 or 150 mm. These are supplied pre-assembled.

Linking with tie rods

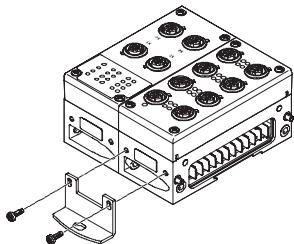

The mechanical connection between the CPX modules is created using special tie rods [2]. Two screws in the end plates are all that are needed to assemble the entire unit. The tie rod ensures that the unit withstands high mechanical loads and is therefore the “mechanical backbone” of the CPX terminal.

The open design allows interlinking blocks [1] to be replaced in the assembled state.

The tie rod expansion kit [3] enables an extra module to be added to the CPX terminal.

CPX terminal in metal version

Additional mounting parts

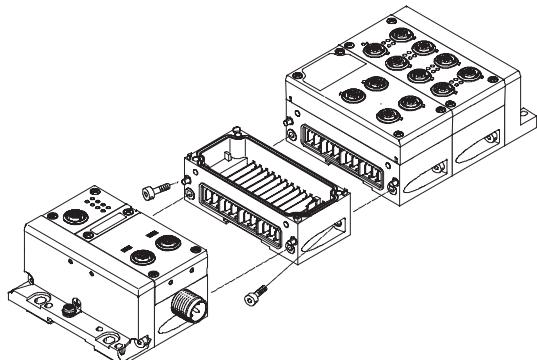

For longer valve terminals, there are additional mounting brackets for the CPX terminal that can be fitted to the interlinking blocks.

Note
In the case of CPX terminals with 4 and more interlinking blocks, additional mounting brackets of type CPX-M-BG-RW... must be used approx. every 100 or 150 mm. These are supplied pre-assembled.

Linking with screws

The mechanical connection between the CPX modules is created using a splayed screw connection. The CPX terminal is thus flexibly expandable at any time.

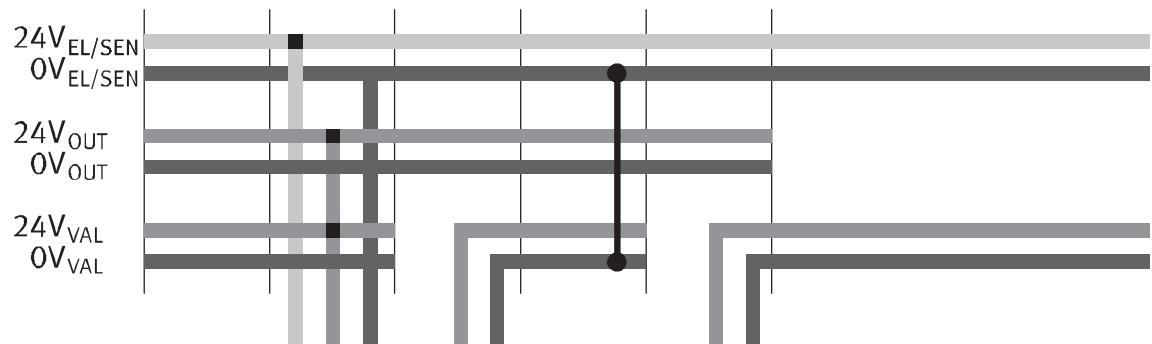

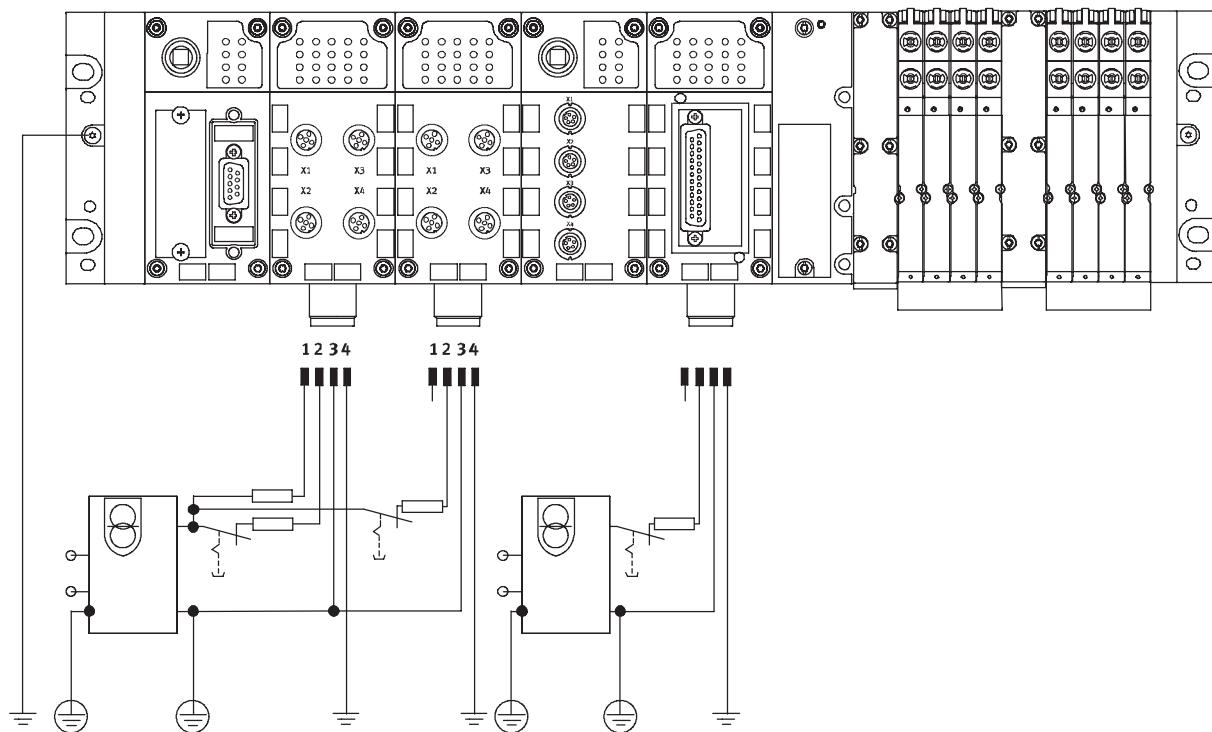

Terminal CPX

Key features – Power supply

FESTO

Power supply concept

General information

The use of decentralised devices on the fieldbus – particularly with high protection for direct machine mounting – demands a flexible power supply

concept. A valve terminal with CPX can be supplied with all voltages using a single socket.

A distinction is made between supply for

- electronics plus sensors
- valves plus actuators

in this case. The following connecting thread can be selected:

- M18
- 7/8"

Interlinking blocks

Interlinking blocks represent the backbone of the CPX terminal with all supply lines. They provide the power supply for the modules used on them

as well as the bus connection. Many applications require the CPX terminal to be segmented into voltage zones. This applies in particular to the

separate disconnection of solenoid coils and outputs. The interlinking blocks provide either a space-saving central power supply

for the entire CPX terminal or galvanically isolated, all-pin disconnectable potential groups/voltage segments.

Power supply

- For valves that are connected to the CPX terminal via a pneumatic interface

For 7/8":
– Commercially available accessories are often limited to max. 8 A

Note
Valve terminal type 32 MPa has either a 7/8", 5-pin, 7/8", 4-pin or M18, 3-pin power supply for one or more voltage zones of the valves.

Galvanically isolated, all-pin disconnectable with voltage monitoring in the following MPA module.

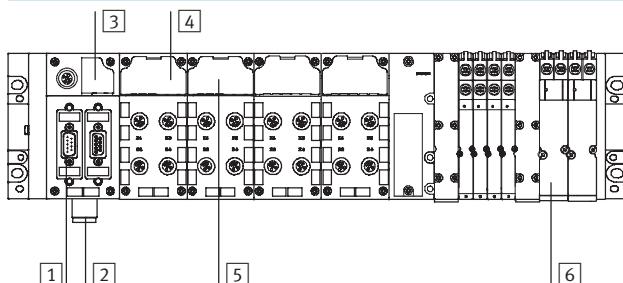

Terminal CPX

Key features – Diagnostics

FESTO

Diagnostics

System performance

Detailed diagnostic functions are needed in order to quickly locate the causes of errors in the electrical installation and therefore reduce downtimes in production plants. A basic distinction is made between on-the-spot diagnostics using LEDs or handheld control unit and diagnostics using a bus interface.

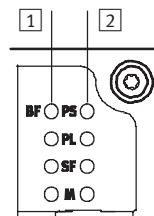

The CPX terminal supports on-the-spot diagnostics via a row of LEDs. This is separate from the connection area and therefore provides good visual access to status and diagnostic information.

- [1] Diagnostics via bus interface
- [2] Undervoltage monitor
- [3] Diagnostic overview LED
 - Fieldbus status
 - CPX status
- [4] Status and diagnostic LED for module and I/O channels

- [5] Module and channel-specific diagnostics
- [6] Valve-specific diagnostics for module and solenoid coils

The diagnostic messages can be read via bus interface in the master controller and visualised for the centralised recording and evaluation of error causes. This is done using the individual fieldbus-specific channels. The CPX-FEC also offers the option of access via the integrated Ethernet interface (remote maintenance via PC/web applications).

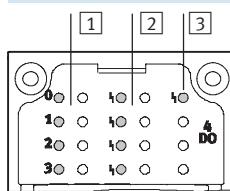

Overview of LEDs on the bus node

- [1] Fieldbus-specific LEDs
On each bus node, a maximum of 4 fieldbus-specific LEDs display the fieldbus communication status of the CPX terminal with the master controller.

- [2] CPX-specific LEDs
A further 4 CPX-specific LEDs provide non-fieldbus-specific information about the status of the CPX terminal, for example
 - Power system
 - Power load
 - System errors
 - Modification parameters

Status of input/output module and diagnostic LEDs

- [1] Status LEDs for inputs and outputs
Each input and output channel is assigned a status LED.

- [2] Channel-oriented diagnostic LED
Depending on the module design, a further diagnostic LED is available for each I/O channel.

- [3] Central diagnostic LED
An LED displays an overall diagnostic for each module.

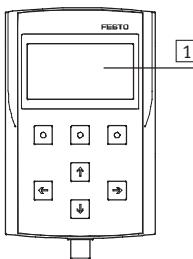

Terminal CPX

FESTO

Key features – Parameterisation

Diagnostics

Display on handheld control unit

- 1 LCD graphical display for plain text diagnostics on the spot
– Location and type of fault
– No programming

Display on Web Monitor

CPX Web Monitor overview

Analogue module, channel-oriented diagnostics

Error memory (fault trace)

The Web Monitor displays all static and dynamic information on a CPX terminal via Ethernet online – in the web browser of the PC.

This facility is optionally available via intranet and Internet. Everything is plug & work – without the need for web programming such as HTML or JAVA.

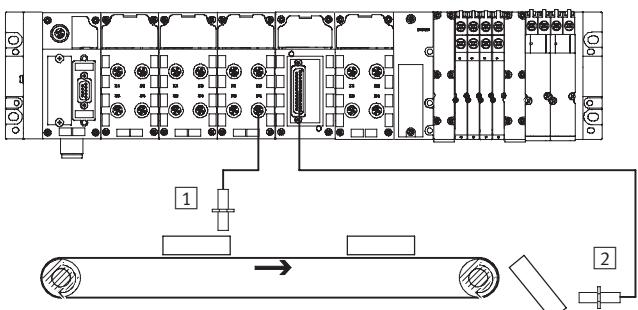

Parameterisation

Changes to the application are often required during commissioning. Thanks to the parameterisable characteristics of CPX modules, functions can be very easily changed by means of configuration software. This reduces the number of modules needed and, consequently, the amount of storage space required.

It is therefore possible for example to reduce the input debounce time for an input module – normally 3 ms – to 0.1 ms on a “fast” input module for faster processes, or to set the response of a valve following a fieldbus failure.

Depending on the modules used, parameterisation can be performed via the following interfaces:

- Ethernet
- Fieldbus
- FEC direct interface (programming interface)
- Handheld control unit CPX-MMI

- 1 Input debounce time 3 ms
2 Input debounce time 0.1 ms

Terminal CPX

Key features – Addressing

FESTO

Addressing

General information on addressing

The various CPX modules occupy a different number of I/O addresses within the CPX system. The maximum address space for bus nodes depends on the performance of the fieldbus system.

- Maximum system extension:
- 1 bus node or control block
 - 9 I/O modules
 - 1 pneumatic interface
(e.g. pneumatic interface MPA with up to 16 MPA manifold sub-bases)

The maximum system extension can be limited in individual cases by exceeding the address space.

Note

Please refer to the detailed description of the configuration/addressing rules in the technical data for CPX bus nodes.

Technical data

FESTO

-  - Module width
50 mm

-  - Repair service

-  - Note

The data given here applies to the CPX system. If components that conform to lower values are used in the system, the specification for the entire system is reduced to the values of those components used.

Example

Protection class IP65/IP67 applies only to the fully assembled system with fitted plugs or covers (which must also conform to IP65/67). If components with a lower protection class are used, the protection level of the entire

system is reduced to the protection class of the component with the lowest protection level, e.g. Cage-Clamp connection block with IP20 protection or MPA pneumatics with IP65 protection.

User documentation – General information

Comprehensive user documentation is vital for the fast and consistent implementation of fieldbus components.

The documentation provided by Festo contains step-by-step instructions for using CPX terminals:

1. Installation
2. Commissioning and parameterisation
3. Diagnostics

Application-oriented explanations are provided for integration of the CPX terminal in the programming and configuration software of the various controller manufacturers. Use the order code to select the language you want.

The manual for the configuration you have ordered is supplied automatically.

Manuals are available on the Festo website:

➔ www.festo.com

CPX macro library for ePLAN

Type

Part No.

GSWC-TE-EP-LA

537 041

Project planning – pure service:

ePLAN macros for fast and reliable planning of electrical projects in combination with valve terminals. Available in German and English.

Key technical data

- CD with CPX macro library ePLAN 5 and P8 for CPX terminal (supports the planning of bus nodes, inter-linking blocks, I/O modules, connection blocks, pneumatic interface and valves)
- Creation and administration of projects

Systematically more reliable:

The CPX macro library contains symbols, graphics and master data. Result: a fast, reliable and standardised system for designing and documenting your circuits.

Simply practical:

High level of planning reliability, standardisation of documentation, no need to create symbols, graphics and master data since everything is stored in the CPX macro library.

Design example:

From an idea to a functional solution – quickly and reliably
Project planning, design, production, assembly, commissioning, service

fluidPLAN from ePLAN and FluidDRAW from Festo

ePLAN and Festo also work together in the creation of pneumatic circuit diagrams:

The Engineering Tool ePLAN fluid has a direct interface to the Festo electronic

catalogue (DKI). All of the relevant data for the parts lists as well as the pneumatic circuit symbols for Festo products are transferred using this import function.

The FluidDRAW software from Festo makes the creation of circuit diagrams for the pneumatic part on the PC both simple and intuitive.

Terminal CPX

Technical data – Operator unit

FESTO

- RJ - Width
81 mm

The operator unit is a small, convenient commissioning and service device for the CPX terminal. It provides data requisition, configuration and diagnostics functions for CPX terminals. Its extremely flexible application range means that data can be read in or out at any location. IP65 compatibility makes it suitable for use in harsh industrial environments.

Application

Functions

- Advance commissioning through the monitoring/forcing of inputs and outputs without fieldbus master/PLC
- Test function for parameter settings, e.g. fail-safe of the outputs or switch-on delay of the inputs
- Plain text diagnostics of module and channel-oriented errors
- Condition monitoring: preselection/loading of counters, activation of the channels to be monitored
- Display of the last 40 error occurrences with timestamp
- Identification of sporadic causes of errors through display of the diagnostic history
- Password protection

Connection

The operator unit is connected to the CPX bus nodes or control block, as appropriate, using a pre-assembled M12 cable. The voltage for the operator unit is supplied through the CPX bus node.
→ Plug & Work.

Communication

Once connected to the CPX terminal, the operator unit loads the available configuration for the I/O modules, valves, etc. This ensures the availability of up-to-date texts, messages, menus and displays. Status information, diagnostic messages and parameter bits are exchanged during operation.

Mounting

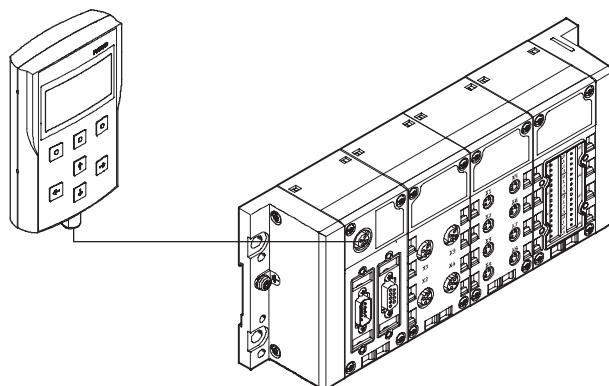

A mounting bracket for the operator unit offers the option of wall or H-rail mounting. The mounting bracket also has an option for temporary mounting using a hanging device.

Terminal CPX

Technical data – Operator unit

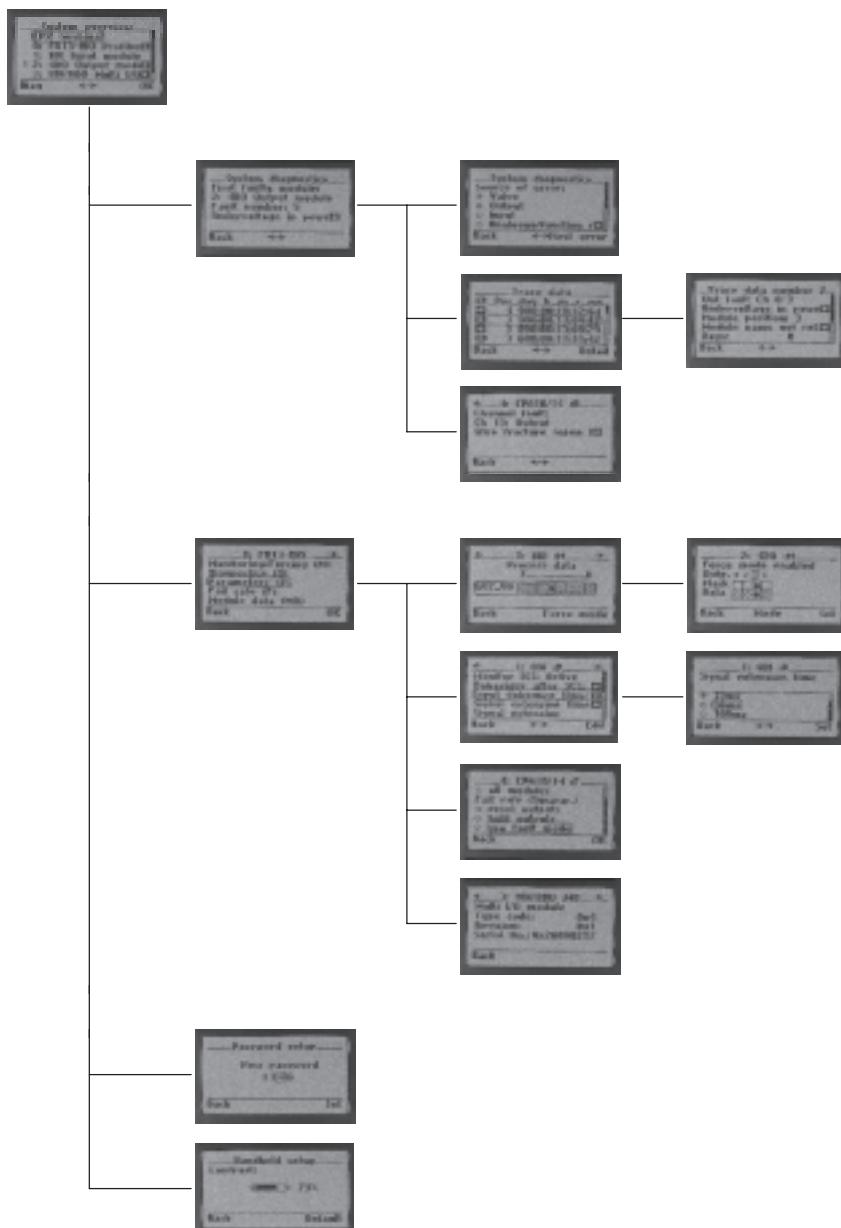

FESTO

Connection

The operator unit is connected to the CPX terminal using pre-assembled cables.

Function examples

System overview

- Overview of configured modules and current diagnostic messages

Diagnostics

- Fast access to the diagnostic history and the modules with diagnostic messaging
- Display of the last 40 diagnostic messages with timestamp
- Display of the current diagnostic message for a module

Commissioning

- Selection of module-specific data and parameters
- Display and modification of the current status of the inputs and outputs of a module
- Display and modification of the current settings for module-specific parameters

Setup

- Setting of access permission (password)
- Contrast setting of the display

Terminal CPX

FESTO

Technical data – Web Monitor

Function

Web Monitor is a software tool from Festo for all CPX modules with integrated web server and Ethernet connection for displaying the CPX service information in real time on a PC connected via a network. This tool provides virtually "free" access to diagnostic and service information, which offers the following benefits:

- Online, up-to-date
- No separate programming
- No separate visualisation

This saves a lot of time and means that there is no need to acquire in-house expertise.

- Supplied on CD-ROM
- Installation on PC
- Adaptation to application
- Loading via Ethernet to the web server of the CPX module
- Display possibility via local touch displays (FED 710, 1010, 2010 or 5010)

Application

Only from Festo

CPX is a modular electrical terminal for the connection of pneumatic and electrical control loop systems to automation systems – suitable for all currently used fieldbus systems.

Valve terminals with the comprehensive diagnostic package consisting of pneumatics, electrics and networking systems create unique synergies and

simplify the communication between the electrical and pneumatic control levels. The Web Monitor makes this diagnostic and additional information

visible at every station and without extra programming. Convenient error analysis by Web Monitor provides permanent diagnostic reliability.

General technical data

Type	CPX-WEB-MONITOR	
Part No.	545 413	
System requirements	PC	IBM-compatible, Pentium class or comparable
	Drive	CD-ROM
	Interfaces	Network connection and access
	Operating system	Microsoft Windows 98, ME, 2000 or XP
Browser requirements	Microsoft Internet Explorer	Version 5.5 and later
	Mozilla Firefox	Version 1.0 and later (full version of Web Monitor only)
	Java plug-in	Java Runtime Environment (JRE) 1.3 or higher
Java script	Enabled	
Cookies	Enabled	
Scope of functions	<ul style="list-style-type: none">• Changing HTML links• Changing symbol names for systems, modules and channels• Incorporating own web pages• Changing passwords• Incorporating Java applets• Commands for dynamic contents	
Scope of delivery	CD-ROM with	<ul style="list-style-type: none">• Installation program• Description in German and English• E-mail driver for FST projects (only relevant when using CPX-FEC modules): SMTP-Driver V0.5• HTML pages for the web server of CPX terminals
Configurable e-mail alerts	8	
Non-volatile storage of e-mail alerts	Yes	
Sending of e-mails	Initiated by events (positive edge at input bit, output bit, diagnostic bit, flag bit)	
E-mail text	Max. 255 characters

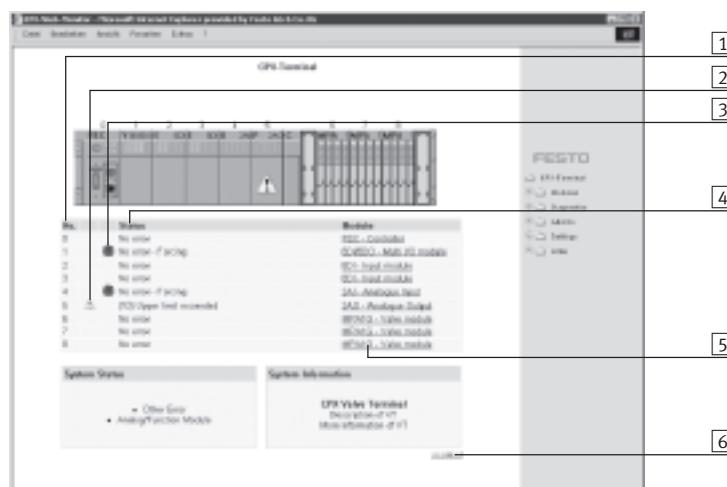

Terminal CPX

Technical data – Control block CPX-FEC

IT services:

Powerful control block for pre-processing actuation of the CPX modules.

The voltage supply to and communication with other modules takes place via the interlinking block.

In addition to the connection for the Ethernet interface in RJ45 and a programming interface in Sub-D, LEDs are also provided for the bus status, operating status of the PLC and CPX peripherals information, as are switching elements and a diagnostic interface for CPX-MMI.

Application

Bus connection

The CPX-FEC is a separate controller, which can be connected to a higher-order PLC via the fieldbus nodes of the CPX terminal or via Ethernet. At the

same time, it is possible to operate the CPX-FEC as a compact standalone controller directly on the machine.

Modbus/TCP (code T05)

Transmits data in binary format within TCP/IP packets. This ensures good data throughput.

Operating modes

- Standalone/EasyIP
- Fieldbus remote controller
- Modbus/TCP remote controller
- Remote I/O Modbus/TCP

Communication protocols

- Profibus, Profinet, DeviceNet, Interbus, CANopen and CC-Link via CPX fieldbus nodes
- Modbus/TCP
- EasyIP

- IP
- TCP
- UDP
- SMTP
- HTTP
- DHCP
- BootP
- TFTP

Setting options

For monitoring, programming and commissioning, CPX-FEC has the following interfaces:

- For the CPX-MMI
- Serial interface RS232, for example, for a Front End Display (FED)
- Ethernet interface for IT applications
- Remote diagnostics via an FED and CPX Web Monitor

The operating mode and fieldbus protocol are set using the DIL switch on the CPX-FEC.

The integrated web server offers a convenient means of querying data saved in the CPX-FEC.

Terminal CPX

Technical data – Bus node CPX-FB6

FESTO

Bus node for handling communication between the electrical CPX terminal and a higher-order master via INTERBUS.

The bus node receives system supply from the interlinking block and processes communication via the I/O modules.

The status of the CPX terminal is displayed as a common message via 4 CPX-specific LEDs.

The fieldbus communication status is displayed via 4 INTERBUS-specific LEDs.

Application

Bus connection

The bus connection is established via a 9-pin Sub-D socket and a 9-pin Sub-D plug with a typical INTERBUS pin allocation.

The bus connector plugs (with protection class IP65/IP67 from Festo or IP20 from other manufacturers) facilitate the connection of the incoming and outgoing bus cable.

The outgoing bus plug contains the typical INTERBUS RBST bridge for identification of the outgoing bus connection.

The Sub-D interfaces are designed for the control of network components with a fibre optic cable connection.

INTERBUS implementation

The CPX-FB6 supports the INTERBUS protocol to EN 50254. In addition to synchronous I/O exchange, the optional PCP channel can be used for parameterisation and diagnostic functions.

The PCP channel provides access to advanced system information and assigns operation parameters while the controller is running via the user program.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity of 96 inputs and 96 outputs, the CPX-FB6 supports a large number of I/O module configurations, including pneumatic interface.

Note

If the PCP channel is used, the maximum number of possible process data bits is reduced by 16.

Special features in combination with CPX-FEC

When a fieldbus node is combined with a CPX-FEC (in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are actuated via the CPX-FEC.

In this case, the fieldbus node only provides the communication interface to the PLC. Communication between CPX-FEC and CPX fieldbus node takes place via interlinking of the CPX modules.

The CPX-FEC occupies an address capacity of the CPX fieldbus node of:

- 8 byte outputs
- 8 byte inputs

As no other components (e.g. I/O modules) are actuated via the CPX fieldbus node, its address capacity is thus reduced effectively to an 8 byte I/O.

The full address capacity of the CPX-FEC is available for actuation of the peripherals:

- 64 byte inputs
- 64 byte outputs

Hous-ing	Screened	Connection to FE (functional earth)	Hous-ing		

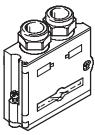

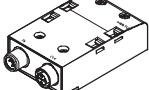

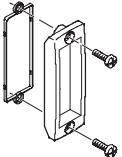

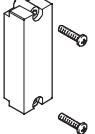

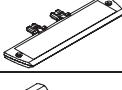

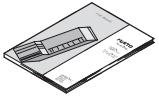

The incoming interface is galvanically isolated from the CPX peripherals. The plug housing is connected to the functional earth FE of the CPX terminal via an R/C combination.

1) The CPX terminal contains the protocol chip SUP1 3 OPC. This ensures automatic detection of additional connected INTERBUS stations. There is therefore no need for a bridge between pin 5 and pin 9.

Terminal CPX

Technical data – Bus node CPX-FB11

FESTO

Bus node for handling communication between the electrical CPX terminal and a DeviceNet network.
The bus node receives system supply from the interlinking block and processes communication via the I/O modules.
The status of the CPX terminal is displayed as a common message via 4 CPX-specific LEDs.
The fieldbus communication status is displayed via the 3 DeviceNet-specific LEDs.

Application

Bus connection

The bus connection can be selected when ordering, either Micro Style as 2xM12 round connectors or OpenStyle as a terminal strip with IP20 protection.

Both connection types have the function of an integrated T-distributor with incoming and outgoing bus line.

DeviceNet implementation

The CPX-FB11 operates with the "Predefined Master/Slave connection set" as a "Group 2 only Server". The polled I/O, change of state or synchronous method is used for the transmission of synchronous I/O data. The type of transmission can be selected in the network configuration.

The device diagnostics for all bus nodes CPX-FB11 is effectively gathered via strobed I/O and displayed in the input table of the controller. In addition to synchronous data transmission, asynchronous communication is supported through explicit messaging, which enables detailed device diagnostics and parameterisation.

A comprehensive EDS file supports the display of asynchronous data. It is also possible to display system information and assign parameters while the controller is running via the user program or the configuration software.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity of 64 byte inputs and 64 byte outputs, the CPX-FB11 supports any configuration of I/O modules, including pneumatic interface.

Special features in combination with CPX-FEC

When a fieldbus node is combined with a CPX-FEC (in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are actuated via the CPX-FEC.

In this case, the fieldbus node only provides the communication interface to the PLC. Communication between CPX-FEC and CPX fieldbus node takes place via interlinking of the CPX modules.

The CPX-FEC occupies an address capacity of the CPX fieldbus node of:

- 8 byte outputs
- 8 byte inputs

As no other components (e.g. I/O modules) are actuated via the CPX fieldbus node, its address capacity is thus reduced effectively to an 8 byte I/O.

The full address capacity of the CPX-FEC is available for control of the peripherals:

- 64 byte inputs
- 64 byte outputs

Terminal CPX

Technical data – Bus node CPX-FB13

FESTO

Bus node for handling communication between the electrical CPX terminal and a higher-order master via Profibus-DP.

The bus node receives system supply from the interlinking block and processes communication via the I/O modules.

The status of the CPX terminal is displayed as a common message via 4 CPX-specific LEDs.

The fieldbus communication status is displayed via the Profibus-specific fault LED.

Application

Bus connection

The bus connection is established via a 9-pin Sub-D socket with a typical Profibus allocation (to EN 50170).

The bus connector plug (with protection class IP65/IP67 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable.

An active bus terminal can be connected using the DIL switch integrated in the plug.

The Sub-D interface is designed for the control of network components with a fibre optic cable connection.

Profibus-DP implementation

The CPX-FB13 supports the Profibus-DP protocol to EN 50170 Volume 2 for synchronous I/O exchange, parameterisation and diagnostic functions (DPV0).

In addition to DPV0, asynchronous communication to the advanced specification DPV1 is supported. DPV1 provides asynchronous access to advanced system information and assigns operation parameters while the controller is running via the user program.

An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity of 64 byte inputs and 64 byte outputs, the CPX-FB13 supports any configuration of I/O modules, including pneumatic interface.

Special features in combination with CPX-FEC

When a fieldbus node is combined with a CPX-FEC (in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are actuated via the CPX-FEC.

In this case, the fieldbus node only provides the communication interface to the PLC. Communication between CPX-FEC and CPX fieldbus node takes place via interlinking of the CPX modules.

The CPX-FEC occupies an address capacity of the CPX fieldbus node of:

- 8 byte outputs

Terminal CPX

Technical data – Bus node CPX-FB14

FESTO

Bus node for handling communication between the electrical CPX terminal and a CANopen network master or CANopen network.

The bus node receives system supply from the interlinking block and processes communication via the I/O modules.

The status of the CPX terminal is displayed as a common message via 4 CPX-specific LEDs.

The different CANopen statuses and the fieldbus communication status are displayed via 3 additional LEDs.

Application

Bus connection

The bus connection is established via a 9-pin Sub-D plug (pin) as per the CAN in Automation (CiA) specification DS 102 with additional 24 V CAN transceiver supply (option as per DS 102).

The bus connector plug (with protection class IP65/IP67 from Festo or IP20 from other manufacturers) facilitates the connection of an incoming and an outgoing bus cable.

There are 4 contacts available for the 4 wires (CAN_L, CAN_H, 24 V, 0 V) of the incoming and outgoing bus cables.

CANopen implementation

The CPX-FB14 supports the CANopen protocol in accordance with the specifications DS 301 V4.01 and DS 401 V2.0.

Implementation is based on the CiA Pre-defined Connection Set.

There are 4 PDOs available for fast I/O data exchange.

Advanced system information can also be accessed by means of SDO communication. SDO communication also facilitates parameterisation before network startup or while the controller is running via the user program. An example of this is access to the integrated diagnostic memory function, i.e. storage of the last 40 errors with timestamp, module, channel and error type.

With its address capacity, the CPX-FB14 supports a large number of I/O module configurations, including pneumatic interface.

By default, 8 byte digital inputs and 8 byte digital outputs can be addressed via PDO 1.

8 analogue input channels and 8 analogue output channels can be addressed via PDO 2 and 3. Status and diagnostic information can be evaluated via PDO 4.

Additional 8 byte digital inputs and outputs as well as 8 analogue input and output channels can be addressed via mapping.

Special features in combination with CPX-FEC

When a fieldbus node is combined with a CPX-FEC (in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are actuated via the CPX-FEC.

In this case, the fieldbus node only provides the communication interface to the PLC. Communication between CPX-FEC and CPX fieldbus node takes place via interlinking of the CPX modules.

The CPX-FEC occupies an address capacity of the CPX fieldbus node of:

- 8 byte outputs
 - 8 byte inputs
- As no other components (e.g. I/O modules) are actuated via the CPX fieldbus node, its address capacity is thus reduced effectively to an 8 byte I/O.

The full address capacity of the CPX-FEC is available for actuation of the peripherals:

- 64 byte inputs
- 64 byte outputs

Terminal CPX

Technical data – Bus node CPX-FB23

FESTO

CC-Link

Bus node for handling communication between the electrical CPX terminal and a higher-order master for Control & Communication-Link (CC-Link) from Mitsubishi.

The bus node receives system supply from the interlinking block and processes communication via the I/O modules.

The status of the CPX terminal is displayed as a common message via 4 CPX-specific LEDs.

The fieldbus communication status is displayed via 4 CC-Link-specific LEDs.

Application

Bus connection

The bus connection can be selected when ordering and is established by means of a screw terminal with IP20 protection, a Sub-D plug with IP65/IP67 protection from Festo or IP20 protection from other manufacturers.

Both connection types have the function of an integrated T-distributor and thus support the connection of an incoming and outgoing bus cable.

The integrated interface with RS 485 transmission technology is designed for the typical CC-Link 3-wire connection technology (in accordance with CLPA CC-Link Spec. V1.1).

CC-Link implementation

The CPX-FB23 supports max. 4 stations per slave. The number of stations used can be set by means of DIL switch. Synchronous data transmission for digital and analogue I/Os is

conducted using the bit and word ranges (Rx/Ry/RWr/RWw). The CPX-FB23 supports an address space of max. 64 digital inputs and 64 digital outputs (Rx/Ry) or up to

16 analogue inputs and 16 analogue outputs (RWr/RWw). Mixed operation of digital and analogue inputs/outputs is possible.

Example:
Station 1 + 2 = 32 digital inputs and 32 digital outputs,
Station 3 = 4 analogue inputs and 4 analogue outputs

Special features in combination with CPX-FEC

When a fieldbus node is combined with a CPX-FEC (in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are actuated via the CPX-FEC.

In this case, the fieldbus node only provides the communication interface to the PLC. Communication between CPX-FEC and CPX fieldbus node takes place via interlinking of the CPX modules.

The CPX-FEC occupies an address capacity of the CPX fieldbus node of:
• 8 byte outputs
• 8 byte inputs
As no other components (e.g. I/O modules) are actuated via the CPX fieldbus node, its address capacity is thus reduced effectively to an 8 byte I/O.

The full address capacity of the CPX-FEC is available for actuation of the peripherals:
• 64 byte inputs
• 64 byte outputs

Technical data – Bus node CPX-FB32

FESTO

Bus node for handling communication between the electrical CPX terminal and the Ethernet/IP network.

The bus node receives system supply from the interlinking block and processes communication via the I/O modules.

The status of the CPX terminal is displayed as a common message via 4 CPX-specific LEDs.

IT services:

Web

E-mail

File transfer

Application

Bus connection

The bus connection is established via an M12 plug, D-coded to IEC947-5-2 with protection class IP65/67.

Ethernet/IP is an open bus system based on the Ethernet standard and TCP/IP technology (IEEE802.3).

Ethernet/IP implementation

The CPX-FB32 supports the two remote I/O and remote controller operating modes. In remote I/O operating mode, all functions of the CPX valve terminal are

directly controlled by the Ethernet/IP master (host). In addition to having control via a bus system, it is possible to use IT technol-

ogies. An integrated web server enables diagnostic data to be visualised via HTML. Various programs support direct access to the data of the device

from the automation network. The Ethernet/IP node for CPX supports the transmission technology that conforms to DIN EN 50173/CAT 5.

Special features in combination with CPX-FEC

When a fieldbus node is combined with a CPX-FEC (in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are actuated via the CPX-FEC.

In this case, the fieldbus node only provides the communication interface to the PLC.

Communication between CPX-FEC and CPX fieldbus node takes place via interlinking of the CPX modules.

The CPX-FEC occupies an address capacity of the CPX fieldbus node of:

- 8 byte inputs/outputs or
- 16 byte inputs/outputs

Terminal CPX

Technical data – Bus node CPX-FB33

FESTO

Bus node for operating the CPX valve terminal on PROFINET IO.

The bus node receives system supply from the interlinking block and processes communication via the I/O modules.

The status of the CPX terminal is displayed as a common message via 4 CPX-specific LEDs.

The fieldbus communication status is displayed via three bus-specific LEDs.

Application

Bus connection

The bus connection is established via two M12 sockets, D-coded to IEC61076-2-101 with protection class IP65/67.

Both connections are equivalent 100BaseTX Ethernet ports with integrated Auto-MDI functionality

(crossover and patch cables can be used), which are merged via an internal switch.

- Maximum segment length 100 m
- Baud rate 100 Mbps

PROFINET implementation

The CPX-FB33 supports the PROFINET IO protocol on the basis of the Ethernet standard and TCP/IP technology to IEEE802.3. This ensures data transfer with a high baud rate, e.g. IO data of sensors, actuators or robot controllers, PLCs or process equipment. In addition,

non-real time critical information such as diagnostic information, configuration information, etc. can be transferred. The Ethernet bandwidth is sufficient to transfer both data types (real-time and non-real-time) in parallel.

The bus node features LEDs for the bus status and CPX peripherals information, as well as switching elements, memory stick and a diagnostic interface. The memory stick helps to ensure that the fieldbus node can be replaced quickly in the event of an error. With PROFINET the user has

access to all peripherals, diagnostic data and parameter data of the CPX valve terminal. The fieldbus node can be used as a remote I/O or remote controller. All information relevant to the CPX can be read out and changed depending on the function via an MMI.

Special features in combination with CPX-FEC

When a fieldbus node is combined with a CPX-FEC (in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are actuated via the CPX-FEC.

In this case, the fieldbus node only provides the communication interface to the PLC.

Communication between CPX-FEC and CPX fieldbus node takes place via interlinking of the CPX modules.

The CPX-FEC occupies an address capacity of the CPX fieldbus node of:

- 8 byte inputs/outputs or
- 16 byte inputs/outputs

Terminal CPX

Technical data – Bus node CPX-FB34

FESTO

Bus node for operating the CPX valve terminal on PROFINET IO.

The bus node is provided with system supply via the interlinking block and processes communication via the I/O modules.

The status of the CPX terminal is displayed as a common message via four CPX-specific LEDs.

The fieldbus communication status is displayed via three bus-specific LEDs.

Application

Bus connection

The bus connection is established via two RJ45 push-pull sockets to IEC61076-3-106 and IEC60603 with IP65/67 protection.

Both connections are equivalent 100BaseTX Ethernet ports with integrated auto MDI functionality

(cross-over and patch cables can be used) that are brought together via an internal switch.

- Maximum segment length 100 m
- Transmission rate 100 MBit/s

PROFINET implementation

The CPX-FB34 supports the PROFINET IO protocol based on the Ethernet standard and the TCP/IP technology to IEEE802.3. This guarantees data exchange with a high data transmission rate, for example I/O data from sensors, actuators or robot controllers, PLCs or

process equipment. Furthermore, non real-time critical information such as diagnostic information, configuration information, etc. can be transferred. The Ethernet bandwidth is sufficient to transmit both data types (real-time and non real-time) in parallel.

The bus node features LEDs for bus status and CPX peripheral information as well as switch elements, memory stick and a diagnostic interface. The purpose of the memory stick is to guarantee fast replacement of the fieldbus node in the event of an error. PROFINET provides the user with

access to all peripherals, diagnostic data and parameter data of the CPX valve terminal. The fieldbus node can be used as a remote I/O or remote controller. All information relevant to the CPX can be read out and, depending on the function, changed via an MMI.

Special features in combination with CPX-FEC

When a fieldbus node is combined with a CPX-FEC (in the fieldbus remote controller operating mode), the connected I/Os and/or valves, sensors and actuators are actuated via the CPX-FEC.

In this case, the fieldbus node only provides the communication interface to the PLC.

Communication between CPX-FEC and CPX fieldbus nodes takes place via interlinking of the CPX modules.

The CPX-FEC occupies an address capacity of the CPX fieldbus node of:

- 8 byte inputs/outputs

Terminal CPX

Technical data – CPX-CP interface

FESTO

The CPX-CP electrical interface establishes the connection to CP modules of the CPI installation system via prefabricated cables. The I/O data of the connected valve terminals with CP string extension and CP input and output modules is transferred to the connected CPX bus node and thus via fieldbus to the higher-order controller. This enables the establishment of modular centralised and compact decentralised concepts with one system. The CP electrical interface is supported by all CPX fieldbus nodes and the CPX-FEC.

Application

CP connection

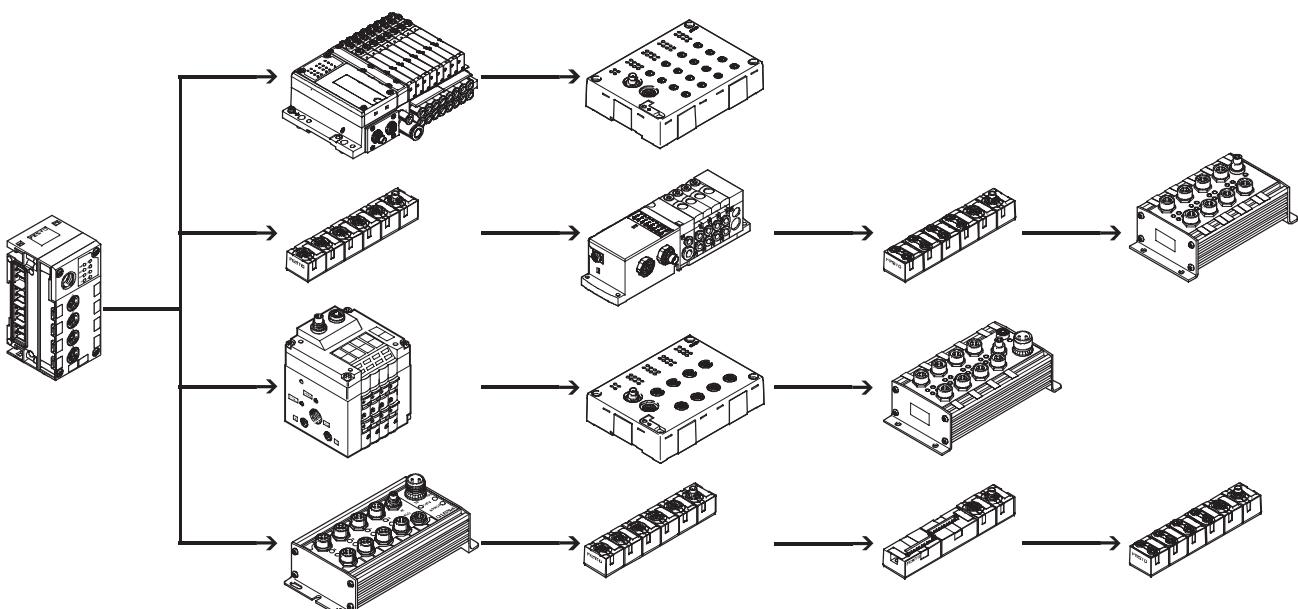

As well as transmitting the communication data, the max. 4 CP strings of a CPX-CP interface also transmit the supply voltage to the connected sensors and the load supply to the valves (or outputs). Both circuits are supplied with 24 V separately from

one another, but with a common reference potential. The valve terminals with CP string extension (or outputs) are supplied with voltage for the electronics and valves by the interlinking block.

The following combinations are made possible by the CP interface:

- Centralised analogue and digital inputs and outputs of the CPX terminal
- Decentralised digital inputs and outputs of the CP installation system
- Valve/valve terminals that can be connected both centrally and decentrally

Configuration example – CP interface with CP modules

Terminal CPX

Technical data – CPX-CP interface

FESTO

Implementation

The CPX-CP interface supports the CPI system:

- Max. 4 individual electronically protected CP strings
- Max. 4 CP modules per string
- Max. 32 inputs/32 outputs per string
- The maximum length of a string is 10 m. If the CP interface is positioned centrally, the CP system can cover an area of 20 m in diameter
- Modules with CPI functionality

When arranging the CP modules it should be taken into consideration that CP input modules without CPI functionality should always be placed at the end of a string.

The following CP module variants are available:

- Input modules with 8 or 16 digital inputs (connection technology M8, M12 and CageClamp)
- Output modules with 4 or 8 digital outputs (connection technology M12)
- Valve terminals with CP string extension (up to 32 solenoid coils, different valve functions)

CPI modules support the following functions:

- Module-oriented diagnostics
- Module/channel-oriented parameterisation
- Support of all functions by the CPX-MMI operator unit
- Module can be positioned anywhere within the string

Several CP interface modules can be combined in one CPX terminal, depending on the address capacity of the bus node.

Example:

- CPX-FB13 (512 I/O)
- Max. 4 CP interface modules (128 I/O each) possible

Configuration

The following rules apply for a string of a CPX-CP interface:

- Max. one output module or one valve terminal without CPI functionality
- Max. one output module without CPI functionality or one valve terminal with CP string extension
- Any number of CP modules with CPI functionality, up to the maximum limit of 4 modules and/or 32 inputs/32 outputs per string

The remanent saving of configuration data means that changes in the configuration or faulty modules are still displayed even after a voltage failure.

Maximum extension:

- 4 input modules and 4 valve terminals/output modules without CPI functionality
- 16 CP modules with CPI functionality

The configuration of the strings with respect to the module type and position of the modules in the string is entered by activating the SAVE key in the CPX-CP interface and saved there remanently (plug and work). Saved data is retained even when the CP interface is isolated from the voltage supply.

The representation of the CP interface within a CPX terminal and thus at the fieldbus is dependent on the characteristics of the relevant fieldbus system. In addition to input and output addressing, this also applies to the representation of the diagnostics and parameterisation of the CP module and the characteristics of the CPI system.

Technical data – Input module, digital

FESTO

Function

Digital input modules enable the connection of two-wire and three-wire sensors (proximity sensors, inductive or capacitive sensors, etc).

Depending on the connection block selected, the module supports various connection concepts with different numbers of sockets (single or double allocation).

Application

- Input modules for 24 V DC sensor voltage supply
- PNP or NPN logic
- Supports connection blocks with M12, M8, Sub-D, Harax and terminal connection
- Module features can be parameterised
- The input module receives the voltage supply for the electronics and the sensors from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection

Terminal CPX

Technical data – Input module, digital, 16 inputs

Function

Digital input modules enable the connection of two-wire and three-wire sensors (proximity sensors, inductive or capacitive sensors, etc.).

Depending on the connection block selected, the module supports various connection concepts with different numbers of sockets (single or double allocation).

Application

- Input modules for 24 V DC sensor voltage supply
- PNP logic
- Module features can be parameterised
- The input module receives the voltage supply for the electronics and the sensors from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection

General technical data

Type	CPX-16DE	CPX-M-16DE-D
Part No.	543 815	550 202
No. of inputs	16	16
Max. power supply	per module [A] 1.8 per channel [A] 0.5	1.8 0.5 (per channel pair)
Fuse protection	Internal electronic fuse protection for each module	Internal electronic fuse protection for each channel pair
Intrinsic current consumption	[mA] Typ. 15	Typ. 34
Supply voltage of sensors	[V DC] 24 ±25%	24 ±25%
Galvanic isolation	Channel – Channel Channel – Internal bus	No No
Switching level	Signal 0 [V DC] ≤ 5 Signal 1 [V DC] ≥ 11	≤ 5 ≥ 11
Switch-on debounce time	[ms] 3 (0.1 ms, 10, 20 parameterisable)	3 (0.1 ms, 10, 20 parameterisable)
Input characteristic curve	IEC 1131-2	IEC 1131-2
Switching logic	Positive logic (PNP)	Positive logic (PNP)
LED displays	Group diagnostics 1 Channel diagnostics – Channel status 16	1 16 16
Diagnostics	Short circuit/overload, sensor supply	Short circuit/overload per channel
Parameterisation	• Module monitoring • Behaviour after short circuit • Switch-on debounce time • Signal stretching time	
Protection class to EN 60529	Depending on connection block	
Temperature range	Operation [°C] -5 ... +50 Storage/transport [°C] -20 ... +70	-5 ... +50 -20 ... +70
Materials	Polymer	Polymer
Grid dimension	[mm] 50	50
Dimensions (including interlinking block and connection block) W x L x H	[mm] 50 x 107 x 50	50 x 107 x 50
Weight	[g] 38	38

Technical data – Output module, digital

Function

Digital outputs control actuators such as individual valves, hydraulic valves, heating controllers and many more. Separate circuits are created using an additional power supply. Parallel connection of the outputs of a module enables consuming devices to be controlled with up to 4 A.

Application

- Output module for 24 V DC supply voltage
- PNP logic
- Module features can be parameterised
- The output module receives the voltage supply for the electronics and the outputs from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection in each channel

Terminal CPX

Technical data – Input/output module, digital

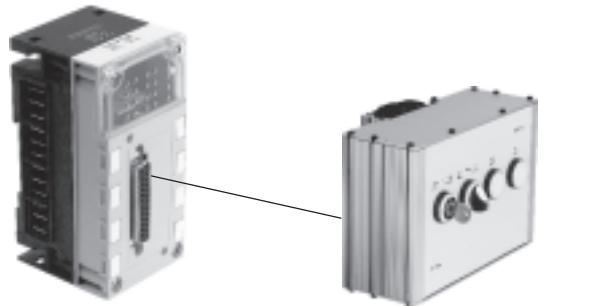

FESTO

Application

- Digital multi I/O module for 24 V DC supply voltage
- Supports connection blocks with Sub-D, terminal connection and M12 connection (8-pin)
- Module features can be parameterised
- The inputs receive the voltage supply for the electronics and the sensors from the interlinking block
- The outputs receive the voltage supply for the electronics and outputs from the interlinking block
- Module protection and diagnostics through integrated electronic fuse protection for the sensor power supply and integrated electronic fuse protection in each output channel

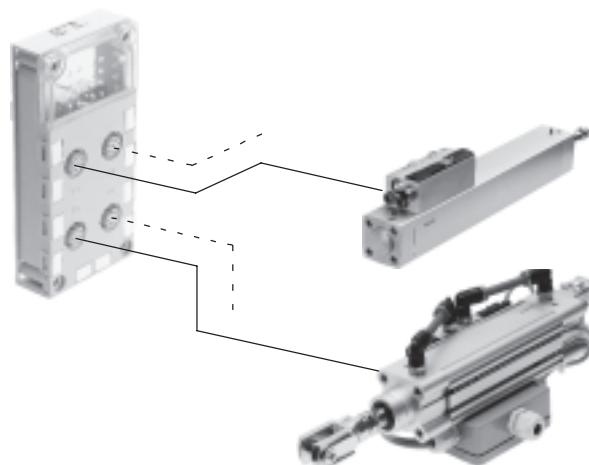

Function

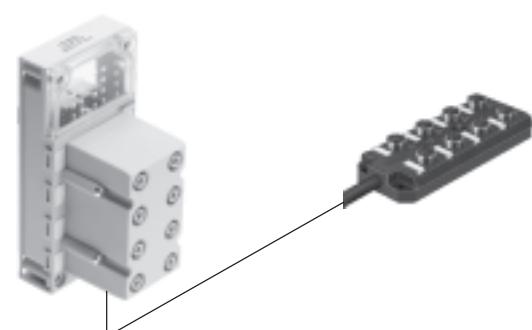

The multi I/O module controls devices with a high number of inputs and outputs per connection point. Because the module supports Sub-D connection blocks, consoles with pushbuttons and lamps can be connected to the CPX terminal using a minimal amount of installation space.

Up to 8 inputs and outputs can be connected to a connection point with IP65 protection.

Support for the M12 connection block (8-pin) means that up to 4 cylinder-valve combinations with integrated sensors can be connected. Each cylinder-valve combination is supported by 2 inputs and 2 outputs per socket. It is therefore possible to control max. 2 solenoid coils and operate 2 sensors with a pre-assembled cable.

Two inputs on two sockets are bridged to provide support for the diagnostic module of the cylinder-valve combination. This effectively means that there are 3 inputs and 2 outputs available on 2 sockets.

As an alternative to the Sub-D and M12 connection block (8-pin) for installation with higher protection class IP65, the terminal connection block produces an identical result for installation with IP20 protection – or with IP65/67 protection with additional cover.

Subordinate I/O modules with multi-pin plug connection (Sub-D plug or multi-pin cable for self-assembly) support the cost-effective and space-saving integration of critical installation areas such as chain link trunking or upstream functions.

Technical data – Analogue module for inputs

Function

Analogue modules control devices with a standardised analogue interface such as pressure switches, temperature, flow rate, filling level, etc. Depending on the connection block selected, the analogue module supports various connection concepts with different numbers of sockets or terminals.

Application

- Analogue module for 0 ... 10 V, 0 ... 20 mA or 4 ... 20 mA
- Supports connection blocks with M12, Sub-D and terminal connection
- Analogue module features can be parameterised
- Different data formats available
- Operation with and without galvanic isolation possible
- The analogue module receives the voltage supply for the electronics and the sensors from the interlinking block
- Analogue module protection and diagnostics through integrated electronic fuse protection

General technical data

Type	CPX-2AE-U-I 526 168	CPX-4AE-I 541 484
Part No.		
No. of analogue inputs	Voltage input 2	Current input Choice of 2 or 4
Max. power supply per module	[A] 0.7	
Fuse protection		Internal electronic fuse protection for sensor supply
Current consumption from 24 V sensor supply (quiescent current)	[mA]	Typically 50
Current consumption from 24 V sensor supply (at full load)	[A]	Max. 0.7
Supply voltage of sensors	[V DC]	24 ±25%
Signal range (parameterisable for each channel by means of DIL switch or software)	0 ... 10 V DC	0 ... 20 mA 4 ... 20 mA
Resolution	[bit]	12
No. of units		4096
Absolute accuracy	[%]	±0.5 ±0.6 ±0.6
Linearity errors (no software scaling)	[%]	±0.05 ±0.05 ±0.05
Repetition accuracy (at 25 °C)	[%]	0.15 0.15 0.15
Input resistance	[kΩ]	100 ≤ 0,1 ≤ 0,1
Max. permissible input voltage	[V DC]	30 – –
Max. permissible input current	[mA]	– 40 40
Conversion time per channel	[μs]	Typically 150
Cycle time (module)	[ms]	≤ 4 ≤ 10

Technical data – Analogue module for temperature inputs

FESTO

Function

The CPX-PT100 analogue input module with 4 channels for temperature measurement enables the connection of up to 4 temperature sensors of type PT100-PT1000, Ni100-Ni1000 etc. Depending on the connection block selected, the temperature module supports various connection concepts with different numbers of sockets or terminals.

Application

- Temperature module for temperature sensors PT100, PT200, PT500, PT1000, Ni100, Ni120, Ni500, Ni1000
- Supports connection blocks with M12, Harax and terminal connection
- Temperature module features can be parameterised
- 2-wire, 3-wire and 4-wire connection
- The temperature module receives the voltage supply for the electronics and the sensors from the interlinking block
- Temperature module protection and diagnostics through integrated electronic fuse protection

General technical data

Type	CPX-4AE-T	
Part No.	541 486	
No. of analogue inputs	Temperature input	
Max. power supply per module	[A]	0.7
Fuse protection	Internal electronic fuse protection for sensor supply	
Current consumption from 24 V sensor supply (quiescent current)	[mA]	Typically 50

Terminal CPX

Technical data – Analogue module for thermocoupler

Function

The CPX-4AE-TC analogue input module with four channels for temperature measurement enables up to four thermocoupler sensors to be connected.

The channels feature wire break and short circuit detection.

If no cold junction compensation sensor is being used, an internal theoretical value of 25 °C can be used (accuracy is impaired).

Application

- Supports connection blocks with M12 and terminal connection
- Temperature module features can be parameterised
- 2-wire connection
- 2-wire connection for a PT1000 sensor for cold junction compensation
- The temperature module is provided with voltage supply for the electronics and the sensors via the interlinking block
- Temperature module protection and diagnostics through integrated electronic fuse protection

General technical data

Type	CPX-4AE-TC	
Part No.	553 594	
	Temperature input	
No. of analogue inputs	4	
Fuse protection (short circuit)	Internal electronic fuse for each channel	
Nominal operating voltage	[V DC]	24
Operating voltage range	[V DC]	18 ... 30
Sensor type (parameterisable for each channel by means of software)	<ul style="list-style-type: none"> • Type B +400 ... +1820 °C, 8 µV/°C • Type E -270 ... +900 °C, 60 µV/°C • Type J -200 ... +1200 °C, 51 µV/°C • Type K -200 ... +1370 °C, 40 µV/°C • Type N -200 ... +1300 °C, 38 µV/°C • Type R 0 ... +1760 °C, 12 µV/°C • Type S 0 ... +1760 °C, 11 µV/°C • Type T -200 ... +400 °C, 40 µV/°C 	
Sensor connection technology	2-wire technology	
Operating error limit relative to ambient temperature	[%]	Max. ±0.6
Basic error limit (at 25 °C)	[%]	Max. ±0.4
Repetition accuracy (at 25 °C)	[%]	±0.05
Max. line resistance per conductor	[Ω]	10
Max. residual current per module	[mA]	30
Max. permissible input voltage	[V]	±30
Internal cycle time (module)	[ms]	250

Technical data – Analogue module for outputs

Function

Analogue modules control devices with a standard analogue interface such as proportional valves, etc. Depending on the connection block selected, the analogue module supports various connection concepts with different numbers of sockets or terminals.

Application

- Analogue module for 0 ... 10 V, 0 ... 20 mA or 4 ... 20 mA
- Supports connection blocks with M12, Sub-D and terminal connection
- Analogue module features can be parameterised
- Different data formats available
- Operation with and without galvanic isolation possible
- The analogue module receives the voltage supply for the electronics and the actuators from the interlinking block
- Analogue module protection and diagnostics through integrated electronic fuse protection

Technical data – Interlinking block

Function

Interlinking blocks ensure the electrical supply of all other CPX modules. They have contact rails, from which the other CPX components using the interlinking modules are supplied with current.

Internal division of the power supply makes it possible to switch off specific areas of the sensors and actuators individually.

Application

- All voltages are fed through to the next module by means of system linking.
- The connected electronics module for inputs/outputs or bus nodes taps off the required voltage.

Terminal CPX

Technical data – Interlinking block with additional power supply for outputs

Function

Interlinking blocks ensure the electrical supply of all other CPX modules.

They have contact rails, from which the other CPX components using the interlinking modules are supplied with current.

Internal division of the power supply makes it possible to switch off specific areas of the sensors and actuators individually.

Application

- 24 V DC supply voltage for outputs

Terminal CPX

Technical data – Pneumatic interface MPA

FESTO

Function

The pneumatic interface MPA establishes the electromechanical connection between the terminal CPX and the valve terminal MPA.

The signals from the bus node are forwarded to the control electronics in the electrical modules of the valve terminal MPA via the integrated CPX bus. The bus signal for activation of the solenoid coils is converted in the electronics module for 4 valves (max. 8 coils).

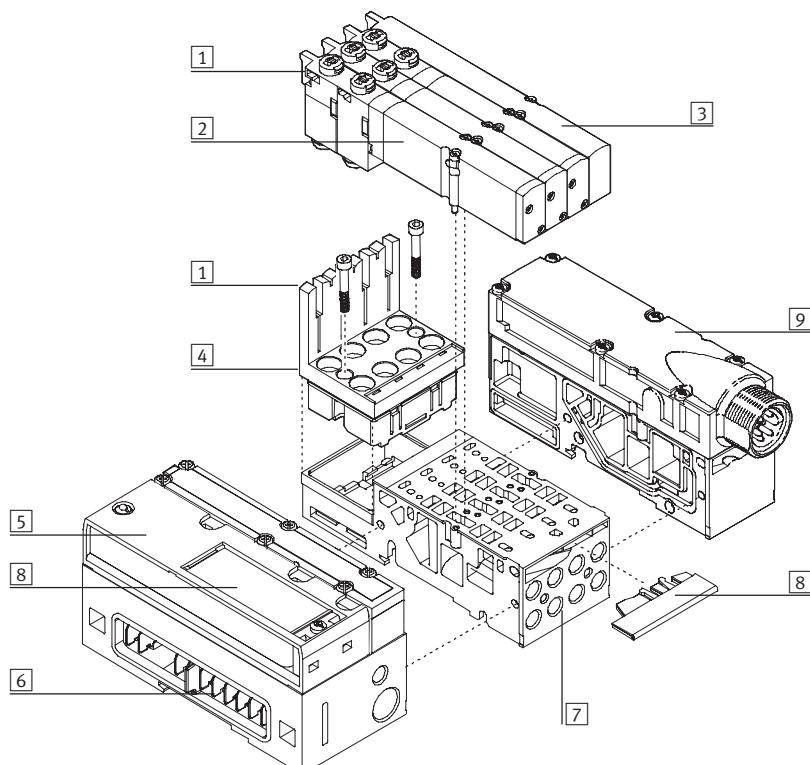

From a technical point of view, the individual MPA pneumatic modules each represent a separate electrical module with digital outputs. Valves, which are galvanically isolated, can be supplied with power via the interlinking block CPX-GE-EV-V.

Application

- Interface to the valve terminal MPA
- Max. 128 solenoid coils
- Max. 16 electronic modules
- Features of the electronics module of the valve terminal MPA can be parameterised, e.g. status of the solenoid coils in the event of field-bus communication being interrupted (fail-safe), individual channel diagnostics can be activated, condition monitoring can be activated individually for each valve
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block and feeds them through to the electronics modules of the valve terminal MPA
- Electronics modules of the valve terminal MPA:
 - Undervoltage of valves
 - Short circuit of valves
 - Open load of valves
 - Counter preset reached in condition monitoring

Terminal CPX

Technical data – Pneumatic interface VTSA/VTSA-F

Function

The pneumatic interface VTSA establishes the electromechanical connection between the terminal CPX and the valve terminal type 44 VTSA/ type 45 VTSA-F.

A complete pneumatic control loop system (FB-valve-drive-sensor-FB) can therefore be connected to the fieldbus using the input modules of the CPX terminal.

Different circuits for valves and electrical outputs are created using an additional power supply. The integrated valve diagnostic functions enable the causes of errors to be found quickly, therefore increasing system availability.

Application

- Interface for valve terminal VTSA and VTSA-F
- Max. 32 solenoid coils
- Address space allocation (configuration) of valve terminals can be set using integrated DIL switches
- Pneumatic interface features can be parameterised, e.g. status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe)
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block
- Detection of missing solenoid coils and short circuit monitoring for the valves

Terminal CPX

Technical data – Pneumatic interface MIDI/MAXI

FESTO

Function

The pneumatic interface MIDI/MAXI connects the valve terminal MIDI/MAXI to the supported fieldbus protocols of the terminal CPX. A complete pneumatic control loop system (FB-valve-drive-sensor-FB) can therefore be connected to the fieldbus using the input modules of the terminal CPX.

Different circuits for valves and electrical outputs are created using an additional power supply. The integrated valve diagnostic functions enable the causes of errors to be found quickly, therefore increasing system availability.

Application

- Interface to valve terminals MIDI/MAXI
- Max. 26 solenoid coils
- Address space allocation (configuration) of valve terminals can be set using integrated DIL switches
- Pneumatic interface features can be parameterised, e.g. status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe)
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block

Technical data – Pneumatic interface CPA

Function

The pneumatic interface CPA connects the valve terminal CPA to the supported fieldbus protocols of the CPX terminal. A complete pneumatic control loop system (FB-valve-drive-sensor-FB) can therefore be connected to the fieldbus using the input modules of the CPX terminal. Different circuits for valves and electrical outputs are implemented using an additional power supply. The integrated valve diagnostic functions enable the causes of errors to be found quickly, therefore increasing system availability.

Application

- Interface to CPA10 and CPA14 valve terminals
- Max. 22 solenoid coils
- Address space allocation (configuration) of valve terminals can be set using integrated DIL switches
- Pneumatic interface features can be parameterised, e.g. status of the solenoid coils in the event of fieldbus communication being interrupted (fail-safe)
- The pneumatic interface receives the voltage for the electronics and the supply voltage for the valves from the left-hand interlinking block
- Detection of missing solenoid coils and short circuit monitoring for the valves
