

- For compact automation applications
- Guided drive units with compact dimensions
- Plain-bearing or recirculating ball bearing guide
- Wide range of direct mounting and air connection options

Specified types in accordance with ATEX directive for potentially explosive atmospheres

Twin cylinders DPZC/DPZCJ

Key features

FESTO

Variants

DPZC-...-S2

DPZCJ

Mounting options

Horizontal mounting from above

Horizontal mounting from below

Side mounting from below

Stroke precision adjustment

- The screw allows adjustment of the standard strokes within a range of 10 mm.

Dimensions – Variance

S2 – Through piston rods

Note

In the case of twin cylinders with through piston rods, the guide rods project beyond the edge of the housing when the unit is in its retracted end position. If the unit is

to be mounted on its end cap against a surface, a recess should be provided in this surface to allow the guide rods to move freely.

 These specifications represent the maximum values which can be reached. Note the maximum permitted impact energy.

Maximum permissible load:

$$m_{load} = \frac{2 \times E_{perm.}}{v^2} - m_{dead}$$

Maximum permissible load m as a function of the impact speed v

Plain-bearing guide GF

Recirculating ball bearing guide KF

Safety distances

Cylinder to cylinder

Safety distance X must be maintained when positioning cylinders together in series, as the stray fields of the switching magnets can result in faulty switching.
