

## Operator units FED, Front End Display

**FESTO**

- Display resolutions from 120 x 32 ... 1024 x 768 pixels
- Variants with text-based monochrome display and colour touchscreen
- Variants with integrated web browser
- Interfaces for PLC, PC, printer and Ethernet
- Simple designing with WYSIWYG editors
- Mains-independent real-time clock

## Operator units FED, Front End Display

Key features

### Multifunctional in use

FED human-machine interfaces simplify the control of automation tasks at field level and set new standards in functionality and integration.

Whether for single- or multi-axis control systems in handling technology or process automation, the FED Front End Display is the optimum solution.

### FED-40 to FED-90:

The semi-graphical display of process values makes them easier to read. Straightforward designing of human-machine dialogues using the FED Designer programming tool supplied.

### FED-300 to FED-5010:

Graphics-capable for maximum flexibility when displaying processes and data. Straightforward designing of human-machine dialogues using the FED Designer programming tool supplied. With integrated web features that support the use of standards. Also with VipWin for convenient visualisation.

### Text-based Front End Displays FED-40 to FED-90

The FED-40 and FED-60 versions complement the proven FED-50 and FED-90 for simple dialogues using 4-line text display and operating buttons whether via a serial, fieldbus or Ethernet connection – the text panels of the FED series are 100% compatible with Festo controllers.

The following functionalities are available depending on the variant:

- Serial interface (FED-40 to FED-90), optional Ethernet for use in a network (not with FED-40)
- Battery backup of the alarm and event data (not with FED-40)
- FED Designer graphical design tool included

• No parameterisation required; the software contains the controller data and detects the display

- Simple graphics possible, enabling scalable font size and simple representation of pictograms and bar charts
- Software for uploading projects
- Recipe handling
- Simple data acquisition

- Generous program memory
- Real-time clock (not with FED-40)
- Printer port (FED-90)
- Password protection
- Alarm handling
- Keypad can be easily programmed using macros
- Multilingual projects possible
- Importing and exporting of texts for translation

### FED-40: the entry-level model

A serial connection is established with the controller. Operation is by means of four freely programmable function keys and seven system keys.

### FED-50: fieldbus-capable

The FED-50 offers the functions of the FED-40 and can additionally be extended with an Ethernet or fieldbus interface. A real-time clock is standard on the FED-50 and higher.

### FED-60: 10-key pad included

In addition to the function and system keys, the FED-60 also features a 10-key pad. The real-time clock is standard here also and a fieldbus interface can be optionally retrofitted.

### FED-90: all-inclusive

The larger size in comparison with the FED-60 means the FED-90 can offer twelve function keys and 23 system keys. A printer interface permits direct output of the alarm and/or event list.

## Operator units FED, Front End Display

Key features

### Front End Displays with touchscreen FED-300 to FED-5010

The touchscreen displays FED-300 to FED-5010 with graphical user interface extend the proven text-based and key pad-equipped Front End Displays FED-40 to FED-90 to include touch-sensitive displays in sizes from 3.8"

to 15". As alternatives to CPX handhelds and integrated displays, these Front End Displays provide a freely definable user interface.

When used as browser or SCADA terminals, the new large-size touchscreen displays FED-710 to FED-5010 enable several subprocesses to be controlled on one display. VipWin software allows the functionality of the

Front End Displays to even be extended to a control and instrumentation system. Festo software tools such as VipWin or FST significantly reduce the time spent on designing.

#### Functions

- Can be connected to all FEC® units, serially or via Ethernet
- Trend display
- Recipe handling
- Multilingual projects and language changeover during the runtime
- Software enables uploading of projects
- Importing and exporting of texts for translation

#### Designing

- Via Designer software for simple visualisation tasks
- As a client/server system: terminal receives data from web servers connected to it and displays this data using the integrated browser functionality
- As a VipWin terminal: integrated hardware and software package for a cost-effective solution to more comprehensive visualisation tasks within the system

#### Key features at a glance

- Quicker and easier commissioning; no programming required in the PLC program
- Convenient FED Designer WYSIWYG design tool
- No duplicate work thanks to importing of variable declarations (allocation list) from the control software
- Can also be used with Festo FEC® units in a network by means of Ethernet
- Graphics capability offers maximum flexibility when displaying processes and data
- Shorter designing periods thanks to reusability of objects (libraries containing graphical elements)
- Thanks to generous memory, almost unlimited number of graphics and texts can be displayed
- Display of complex processes is possible thanks to an unlimited number of variables per page
- Simple logging of all data through integrated printer port
- Extremely sturdy thanks to a metal housing to facilitate use in tough environments

### The Front End Displays in the Festo controller landscape
