- System product for positioning technology
- Outside diameter 15 and 19 mm

Gear couplings EAMC

→ 6

- Three-piece couplings are suitable for force-locked and backlash-free transmission of high torques between electric motors and axes
- System product for positioning technology
- Outside diameter 15, 16, 20, 30, 40, 42, 56, 65 mm

Gear couplings EAMD, with expanding mandrel

→ 10

- Three-piece couplings are suitable for force-locked and backlash-free transmission of high torques between electric motors and axes
- System product for positioning technology
- Outside diameter 16, 19, 25, 32, 42, 56, 67 mm

Connecting shafts KSK

→ 13

Electric axes are often combined to form multi-axis systems. It is particularly important when designing gantry systems with a long gantry axis

Range of applications:

- For synchronising toothed belt axes DGE and EGC
- For torsion-resistant transmission of the necessary torque
- For slip-free transmission of an identical feed speed
- For compensating tolerances and alignment errors between two axes

and heavy loads that the two basic axes be driven synchronously. For these systems, two axes with toothed

belt drive are generally coupled with a shared motor and synchronised using a connecting shaft.

Technical data for toothed belt axis:
DGE-ZR-KF → 14
EGC-TB-KF → 16

Note

The nominal length L1 must be specified in the type code when ordering. The nominal length L1 indicates the centre-to-centre distance between the axes in this case.

Order example:
Two toothed belt axes
DGE-40-...-ZR-KF are to be linked
using a connecting shaft, nominal
length L1 = 1,000 mm.

The following connecting shaft is
required:
Type: KSK-40-1000

Ø - Size
50, 70, 80, 120 and 185

Nominal length L1 = Inside width
between the drive covers

The total mass is calculated
as follows:

$$m_{\text{total}} = m_0 + m_L \times L1$$

The moment of inertia is calculated
as follows:

$$J_{\text{total}} = J_0 + J_L \times L1$$
