

**FESTO** 

Key features

### At a glance

- Combination of parallel gripper with T-slot guide and swivel module on the basis of swivel module DSM
- Infinitely adjustable swivel angle (max. 210°)
- Supply ports and position sensing outside the swivel range
- High performance (torque, mass moment of inertia)
- All connections accessible from one side
- Compact design and low weight

### The technology in detail

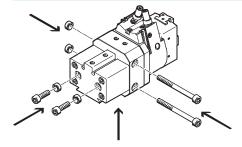

- 1 Three types of cushioning for swivel motion:
  - Elastic cushioning components
     (P)
  - Adjustable, elastic cushioning components with metal fixed stop (P1)
  - Hydraulic shock absorbers with metal fixed stop (YSRT)
- 2 Slot for proximity sensor SME/SMT-10 for sensing the swivel position
- 3 Supply port for swivelling function
- Supply port for gripping function
- Slot for proximity sensor SME/SMT-10 for sensing the gripping position

- 6 Gripper jaw with T-slot guide
- 7 Adjustable stop cams for adjusting the swivel motion
- 8 Rotary vane
- 9 Piston rod for gripping motion

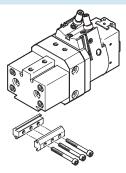

### **Mounting options**

Direct mounting

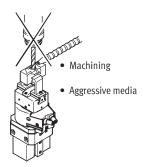

The swivel/gripper unit can be mounted on four sides.

### Dovetail connection

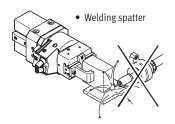

### Note

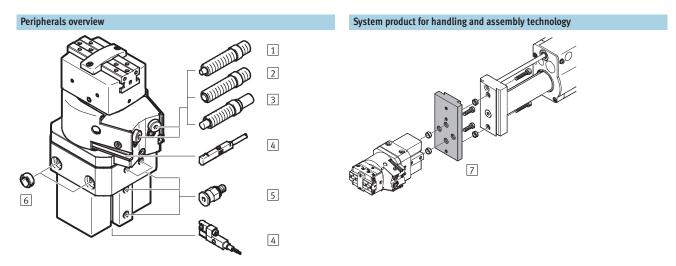

Swivel/gripper units are not suitable for the following or similar applications:

Technical data

### Mass moments of inertia J at 6 bar as a function of swivel time t and swivel angle

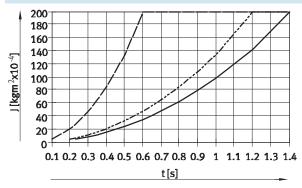

### HGDS-PP-16-YSRT-A-B

### HGDS-PP-20-YSRT-A-B

Swivel angle 210°
Swivel angle 180°
Swivel angle 90°

### Dependency between operating pressure and swivel time

Reducing the operating pressure reduces the gripping force.

To ensure that the gripper's jaws do not open during swivelling, the swivel time must be increased by 15% per bar of operating pressure (same mass moment of inertia).

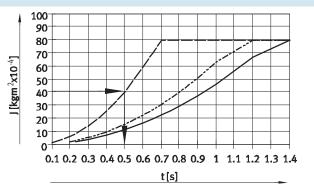

Example: Given: HGDS-PP-16-YSRT-A-B

Operating pressure 6 bar Swivel angle  $90^{\circ}$  J =  $40 \text{ kgm}^2 \text{x} 10^{-4}$ 

To be calculated: Swivel time at an operating pressure of 4 bar Swivel time at 6 bar = 0.5 s, see graph opposite

Swivel time at 4 bar:  $t = 0.5 + 2x \, 15\% = 0.65 \, s$  Cushioning time of the shock absorber = 0.1 s

This yields a total swivel time of  $t_{tot.} = 0.65 \text{ s} + 0.1 \text{ s} = 0.75 \text{ s}$ 

**FESTO** 

### Precision adjustment of the swivel angle

The swivel angle can be roughly adjusted by moving the cam stops

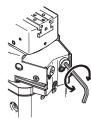

**→** 2.

The procedure for precision adjustment is the same for all  $% \left\{ \left( 1\right) \right\} =\left\{ \left( 1\right)$ cushioning variants (P, P1 and YSRT). The swivel angle can be precisely adjusted by unscrewing or screwing in the cushioning component. Swivelling to a metal stop enables high repetition accuracy.

1) Loosen the locking screw underneath the cushioning component.

Size	12	16	20	
Precision adjustment range				
P cushioning [°]	-6			
P1 cushioning [°]	-6			
YSRT cushioning [°]	-2.5

### Opening and closing times [ms] at 6 bar

With external gripper fingers Without external gripper fingers

The indicated opening and closing times [ms] have been measured at room temperature and 6 bar operating pressure with vertically mounted swivel/gripper unit without additional

gripper fingers. The grippers must be throttled for greater applied loads. Opening and closing times must then be adjusted accordingly.

### Static characteristic load values per gripper jaw

The indicated permissible forces and torques apply to a single gripper jaw. The indicated values include the lever arm, additional applied loads caused by the workpiece or external gripper fingers, as well as forces which occur during movement.

The zero coordinate line (gripper finger guide) must be taken into consideration for the calculation of torques.

Size		12	16	20

Technical data

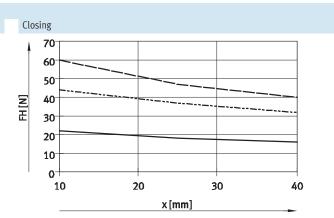

### Gripping force $\mathbf{F}_{\mathbf{H}}$ per gripper jaw as a function of operating pressure $\mathbf{p}$

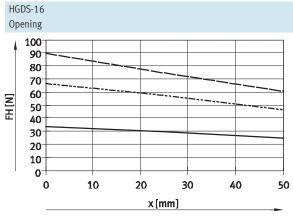

Gripping forces as a function of operating pressure and lever arm can be determined for the various sizes using the following graphs.

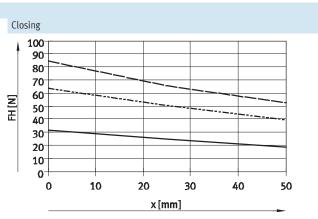

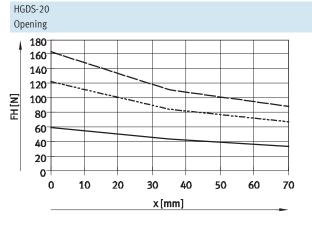

3 bar ----- 6 bar ----- 8 bar

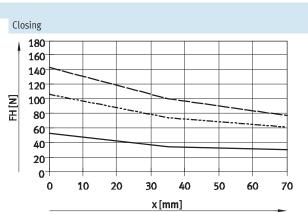

# **Swivel/gripper units HGDS-B** Technical data

**FESTO** 

11

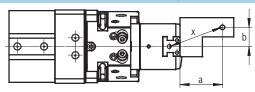

### Gripping force $F_{H}$ per gripper jaw at 6 bar as a function of lever arm $\boldsymbol{x}$ and eccentricity a and $\boldsymbol{b}$

 $x = \sqrt{25^2 + 20^2}$ 

x = 32 mm

The following formula must be used to calculate the lever arm x with eccentric gripping:

$$x = \sqrt{a^2 + b^2}$$

The gripping force  $F_{\mbox{\scriptsize H}}$  can be read from the graphs (→ from page 10) using the calculated value x.

### Calculation example

Given: Distance a = 25 mm

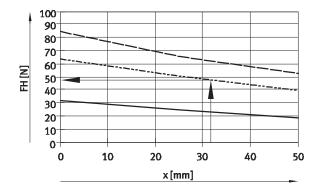

Distance b = 20 mm To be calculated:

The gripping force at 6 bar,

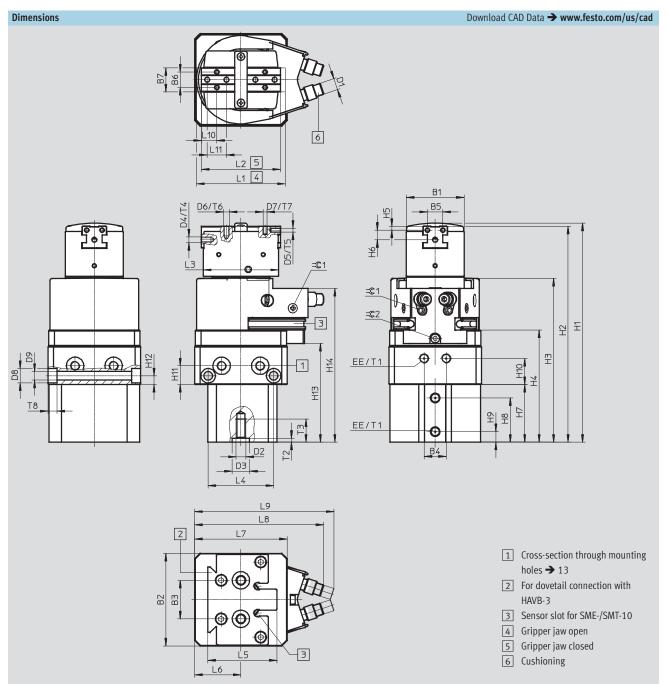

with an HGDS-16,

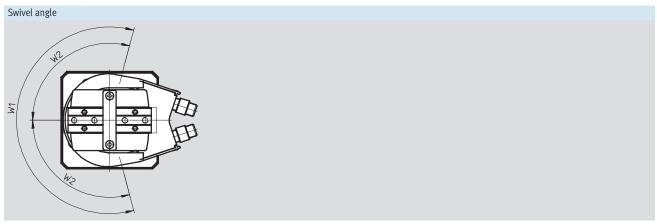

used as an external gripper

Procedure: The graph (→ 10) gives a value of F<sub>H</sub> Calculating the lever arm x = 47 N for the gripping force.

### **Product Range and Company Overview**

### **A Complete Suite of Automation Services**

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

**Custom Automation Components** Complete custom engineered solutions

**Custom Control Cabinets** Comprehensive engineering support and on-site services

**Complete Systems** Shipment, stocking and storage services

### The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical Electromechanical actuators, motors, controllers & drives

**Pneumatics** Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices PLC's, operator interfaces, sensors and I/O devices

### Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

### Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
