# Clamping cartridges/units

- Holding, clamping and braking of round material
- Wide choice of variants
- Any assembly position

# Clamping cartridges/units

Key features

# **FESTO**

# At a glance

- The clamping cartridges/clamping units use spring force to hold round material in any desired position.
- Able to stop and hold material for long periods, even in applications involving varying loads, fluctuating operating pressure and system leaks.
- The clamping force is released by pressurising the clamping mechanism.
- Clamping cartridges and clamping units can be mounted in any position.
- They are not suitable for use as positioning devices.
- The clamping cartridge KP and the clamping units KPE, KEC, KEC-S are discrete components and are not intended for use as attachments for pneumatic cylinders.
- In their clamped state, the clamping cartridges and clamping units are not free of backlash when their piston rods are subjected to alternating loads.

# Selection aid

Clamping cartridge KP

- For in-house assembly of clamping units
- Not certified for use in safetyrelevant control systems

# Clamping unit KPE

**→** 4

- Ready-to-install combination of clamping cartridge KP and housing
- Versatile mounting options → 7
- Not certified for use in safetyrelevant control systems

# Clamping unit KEC

- Holding and clamping in the event of a power failure
- Protection against pressure failure and pressure drop
- Securing the piston rod during intermediate stops for process operations
- Mounting hole pattern to ISO 15552 (DIN ISO 6431)
- Not certified for use in safetyrelevant control systems

→ 8

# Clamping-unit cylinder KEC-...-S, for safety-related applications

# • For use as holding device (static application):

- Holding and clamping in the event of a power failure
- Protection against pressure failure and pressure drop
- Securing of the piston rod during intermediate stops for process operations

# For use as a braking device (dynamic application):

- Braking or stopping of movements
- Suspension of movement upon entering a danger area
- Mounting hole pattern to ISO 15552 (DIN ISO 6431)
- When used as a braking device, the overtravel must be checked regularly

- Suitable for use in safety-related parts of control systems belonging to category 1 to EN ISO 13849-1 (reliable component). For use in higher categories, additional control measures are required
- Certified for use in safety-relevant control systems by the BG-Institute for Occupational Safety and Health (Berufsgenossenschaftlichen Institut für Arbeitsschutz – BIA) in Germany
- Products intended for use in safetyrelated applications must be selected, sized and arranged in accordance with the risk assessment (EN ISO 14121-1) as well as any other valid standards and regulations

# Clamping cartridges/units

**FESTO** 

Key features and type codes

# Requirements for the round material to be clamped

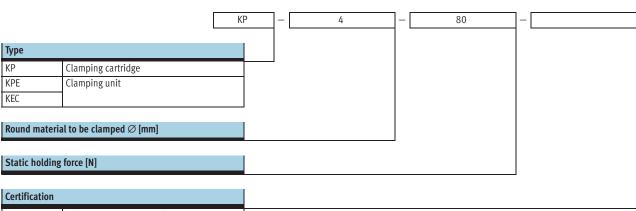

in combination with clamping cartridge KP or clamping unit KPE

- Material:
  - Hard-chromium plated steel
  - Hardened steel
  - Rolled steel: tensile strength > 650 N/mm², hardness (HB30) > 175
- Diameter tolerance: h8
- Surface roughness:  $R_{max.} = 4 \mu m$
- The specified holding forces refer to a static load. If these values are exceeded, slippage may occur
- Clamping cartridge KP and clamping unit KPE are not suitable for dynamic operation

# in combination with clamping unit KEC

- Material:
  - Hard-chromium plated steel: coating thickness min. 20 μm
  - Hardened steel: min. HRC 60
- Diameter tolerance: h7 ... f7
- Surface roughness:
- $R_{max.} = 4 \mu m$
- The specified holding forces refer to a static load. If these values are exceeded, slippage may occur
- Clamping unit KEC is not suitable for dynamic operation
- The following applies to clamping unit KEC-S:
   Dynamic forces occurring during operation must not exceed the static holding force

# Type codes

# S Safety component to Machinery Directive 2006/42/EC. Approved for use in safety-related parts of control systems. Certified by the Institute for Occupational Safety and Health (Berufsgenossenschaftlichen Institut für Arbeitsschutz - BIA) in Germany.

# Clamping cartridges KP Technical data

**FESTO** 

# Function

Diameter of round material to be clamped:

4 ... 32 mm

Force 80 ... 7,500 N

# Note

Additional measures are required for use in safety-related control systems; in Europe, for example, the standards listed under the EC Machinery Directive must be observed. Without

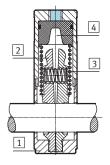

additional measures in accordance with statutory minimum requirements, the product is not suitable for use in safety-related sections of control systems.

1,300 ... 8,000 N

## Note

Additional measures are required for use in safety-related control systems; in Europe, for example, the standards listed under the EC Machinery
Directive must be observed. Without

additional measures in accordance with statutory minimum requirements, the product is not suitable for use in safety-related sections of control systems.

# Note

The specified holding force refers to a static load. If this value is exceeded, slippage may occur. Dynamic forces occurring during operation must not exceed the static holding force if

slippage is to be avoided. The clamping unit is backlash-free in the clamped condition if varying loads are applied to the piston rod.

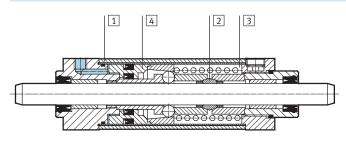

# Activation:

The clamping unit may only be released when equilibrium of forces is present on the piston rod. Otherwise there is a risk of accidents due to the

sudden movement of the piston rod. Blocking off the air supply at both ends (e.g. with a 5/3-way valve) does not provide any safety.

# Note

25

The overtravel is the distance that the round material covers between exhausting of the clamping unit and coming to a standstill. It must be determined by the customer when setting up the machine and be compared with the calculated overtravel

55

17

17

DIN EN 999/EN ISO 13849-2.

The clamping unit KEC-S can be used in safety-related parts of control systems belonging to category 1 (reliable component) as defined by EN ISO 13849-1. For use in higher categories than category 1 to EN ISO 13849-1, the overtravel must be achieved even in the event

126

of faults.

It is dependent on the environmental conditions and stress, e.g.:

32.5

32.5

287

- Operating pressure
- Nominal size of switching valve
- Line length
- Diameter of connecting line to clamping unit
- Load and speed

The overtravel can be reduced by attaching a quick exhaust valve to the supply port of the clamping unit.

<sup>1)</sup> CRC1: Corrosion resistance class to Festo standard 940070 Components with light corrosion exposure. Protection for transport and storage. Components without significant decorative function or surface, e.g. installed out of sight internally or behind covers.

# **Product Range and Company Overview**

# **A Complete Suite of Automation Services**

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

**Custom Automation Components** Complete custom engineered solutions

**Custom Control Cabinets** Comprehensive engineering support and on-site services

**Complete Systems** Shipment, stocking and storage services

# The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical Electromechanical actuators, motors, controllers & drives

**Pneumatics** Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices PLC's, operator interfaces, sensors and I/O devices

# Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 12,000 employees in 56 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

# Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
