FESTO

Standard cylinders DSBG, to ISO 15552

Key features

FESTO

At a glance

DIN

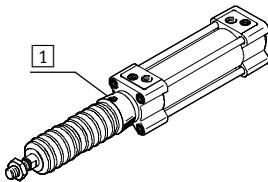

- Standards-based cylinders to ISO 15552 (corresponds to the withdrawn standards ISO 6431, DIN ISO 6431, VDMA 24 562, NF E 49 003.1 and UNI 10290)

- Sturdy tie rod design
- Double-acting
- For contactless position sensing
- Optionally with protection against rotation
- An extensive range of accessories makes it possible to install the cylinder virtually anywhere

- Three types of cushioning available:
 - P cushioning: elastic cushioning rings/pads at both ends
 - PPS cushioning: pneumatic cushioning, self-adjusting at both ends
 - PPV cushioning: pneumatic cushioning, adjustable at both ends

- The variants can be configured according to individual needs thanks to the modular product system
- High flexibility thanks to the wide range of variants

DSBG-...-P2 – With protective bellows kit DADB, to ISO 15552

The protective bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a venting hole in the connection part [1].

The kit protects the piston rod, seal and bearings against a wide variety of media, for example:

- Dust
- Chippings
- Oil
- Grease
- Fuel

Ordering the protective bellows kit

An extended piston rod is absolutely essential if a protective bellows kit is to be used.
The protective bellows kit can be ordered via the modular product system or as an accessory. The following must be noted in this regard:

Ordering via the modular product system:

The corresponding protective bellows kit is automatically supplied when the feature P2 is selected. The required piston rod extension is automatically taken into consideration. This means that there is no need to specify a value in the feature ...E.

Ordering as an accessory:

If the protective bellows kit is ordered as an accessory, the required value → must be entered for the feature ...E in the modular product system.

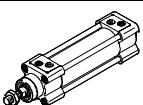

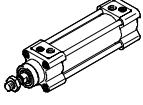

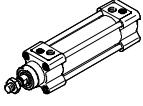

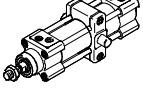

Standard cylinders DSBG, to ISO 15552

Key features

Variants from the modular product system		
Symbol	Features	Description
	Q Square piston rod	Protection against rotation. For correctly oriented feeding
	L Low friction	The special seals considerably reduce system wear. This corresponds to a considerably lower response pressure. Seal contains silicone grease
	U Constant, slow movement	Suitable for slow stroke movements at a constant, judder-free speed over the full stroke of the cylinder. Seal contains silicone grease
	T Through piston rod	For working at both ends with the same force in the forward and return stroke, for attaching external stops
	F Female piston rod thread	-
	R3 High corrosion protection	All external cylinder surfaces comply with corrosion resistance class 3 to Festo standard 940 070. The piston rod is made from corrosion and acid-resistant steel
	T1 Heat-resistant seals	Temperature range 0 ... +120 °C
	T3 Low temperature	Temperature range -40 ... +80 °C
	T4 Heat-resistant seals	Temperature range 0 ... +150 °C
	A2 Wiper seal variant	Hard wiper seal: The cylinder is equipped with a hard-chrome plated piston rod and a rigid wiper seal, which protects against dry, dusty media
	A3 Wiper seal variant	Unlubricated operation: Cleaning processes degrease the piston rod. A special piston rod seal designed for unlubricated operation permits a longer service life compared to the standard seal
	...E Extended piston rod	-
	...L Extended male piston rod thread	-
	...V Swivel mounting position	Attached swivel mounting

Max. lateral force F_q as a function of stroke length l and lever arm s

Q – With protection against rotation

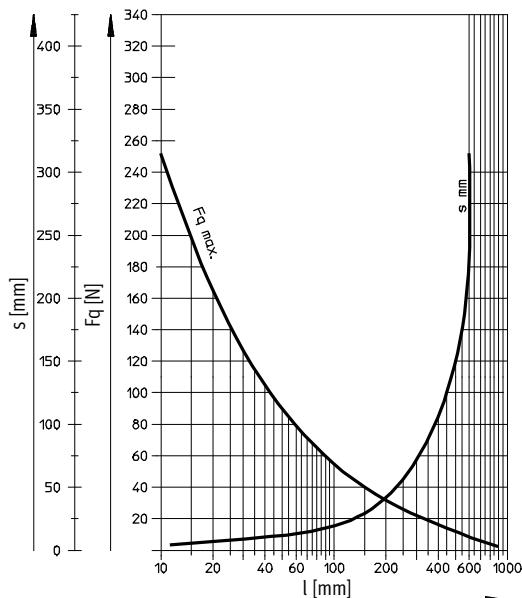

$\varnothing 32$

Max. torque = 800 Nmm/max. stroke = 300 mm

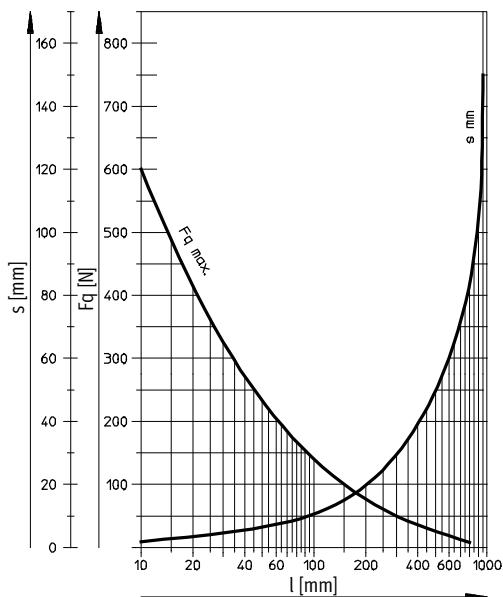

$\varnothing 40$

Max. torque = 1,100 Nmm/max. stroke = 400 mm

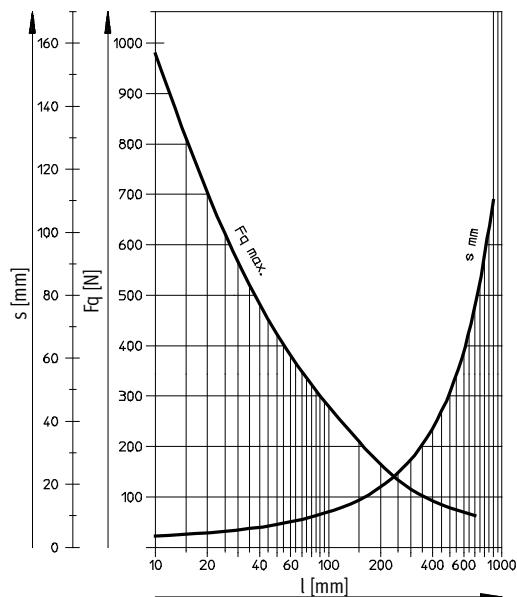

$\varnothing 50/63$

Max. torque = 1,500 Nmm/max. stroke = 500 mm

$\varnothing 80/100$

Max. torque = 3,000 Nmm/max. stroke = 600 mm

Standard cylinders DSBG, to ISO 15552

Technical data

Max. lateral force F_q as a function of stroke length l and lever arm s

Examples for piston $\varnothing 32$ mm

Example 1:

Stroke length $l = 150$ mm

Result: Permissible

lateral force $F_q = 9.5$ N

Lever arm $s = 84$ mm

Example 2:

Lateral force $F_q = 40$ N

Result: Permissible

stroke length $l = 28$ mm

Lever arm $s = 20$ mm

Example 3:

Stroke length $l = 150$ mm

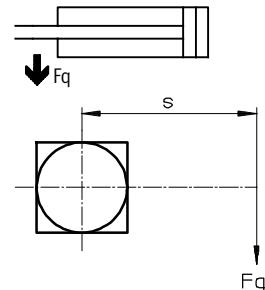

Lever arm $s = 100$ mm

$$F_q = \frac{\text{Max. torque } 800 \text{ Nmm}}{\text{Lever arm } 100 \text{ mm}}$$

$$= 8 \text{ N}$$

Result: Permissible

$$F_q = 8 \text{ N} < F_{q\max.} = 9.5 \text{ N}$$

Ordering data – Modular product

Ordering table

Size	32	40	50	63	80	100	125	Conditions	Code	Enter code
0 Standard	Based on ISO 15552									
0 Corrosion protection	Conforms to ISO 15552							-N3		
Temperature range [°C]	Standard									
	Heat-resistant seals up to max. 120							7 T1		
	-40 ... +80							7 T3		
	0 ... +150							7 T4		
Particle protection	Standard									
	Bellows on bearing cap						-	8 P2		
Wiper seal variant	None									
	Hard wiper seal								A2	
	For unlubricated operation								A3	
Swivel mounting position [mm]	None									
	0 ... 2,800								-...V	
Piston rod extension [mm]	None									
	1 ... 500							9 -...E		
Piston rod thread extension [mm]	None									
	1 ... 35				1 ... 70			9 -...L		

[6] R3 Not with A2, ...V

[7] T1, T3, T4 Not with P2, A2, A3

[8] P2 Not with N3, A2, A3

[9] ...E, ...L Not with N3,
only up to stroke 2,000 mm

The piston rod extension is automatically taken into consideration in combination with feature P2. This means that there is no need to specify a value in the feature ...E.

When feature P2 is ordered in combination with feature T (through piston rod), the bellows is mounted on one side only.

1) Corrosion resistance class 2 according to Festo standard 940 070

Components subject to moderate corrosion stress. Externally visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment or media such as coolants or lubricating agents.

Corrosion resistance class 4 according to Festo standard 940 070

Components subject to very high corrosion stress. Parts used with aggressive media, e.g. in the food or chemical industry. These applications should be supported with special tests with the media if required.

Standard cylinders DSBG, to ISO 15552

Accessories

Flange mounting FNC/CRFNG

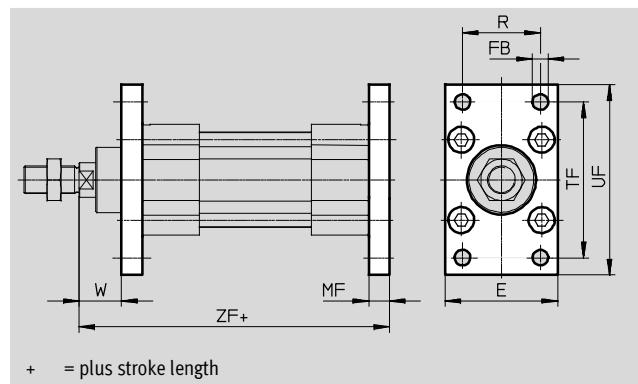

Materials:

FNC: Galvanised steel

CRFNG: High-alloy steel

Free of copper and PTFE

RoHS-compliant

Travel speed v as a function of tubing length l

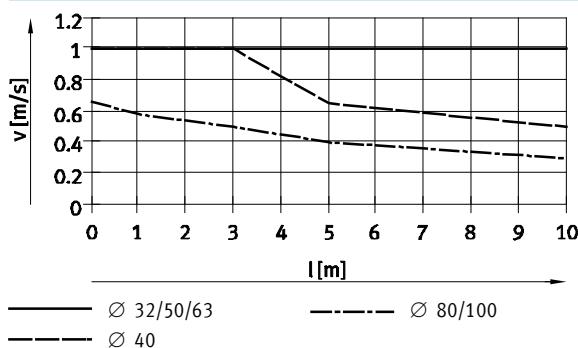

The protective bellows kit is a leak-free system. To prevent unwanted media from being drawn in, the supply and exhaust air must be ducted via a venting hole

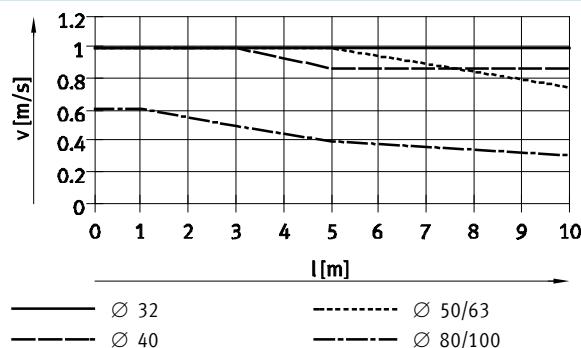

in the connection part **1**. The pressure generated in the protective bellows kit by the positioning motion is primarily defined by the travel

speed and tubing length. The recommended tubing length based on the travel speed of the drive can be read from the graph.

Advancing

Retracting

- - Note

The push-in fittings opposite must be used for the venting hole. Silencers can be used as an alternative. This reduces the travel speed slightly.

1) The dimension corresponds to the E value (piston rod extension) of the drive

Standard cylinders DSBG, to ISO 15552

Accessories

Ordering data – Protective bellows kit

An extended piston rod (order code E) is required when using a protective bellows kit → Ordering data – Modular products.

The necessary dimension for order code E as a function of piston diameter and cylinder stroke as well as the corresponding protective bellows kit is indicated in the table below:

Order example:

Selected standard cylinder:

DSBG-32-320-PPV-A-...

The dimension for the corresponding E value (see table):

112 mm

Complete type code for standard cylinder:

DSBG-32-320-PPV-A-...-112E

The corresponding protective bellows kit:

DADB-V6-32-S301-350

- Note

The maximum overall stroke length must not be exceeded when combining cylinders and multi-position kits.

Connecting two cylinders with identical piston diameters as a 3 or 4-position cylinder

A 3 or 4-position cylinder consists of two separate cylinders whose piston rods advance in opposing directions.

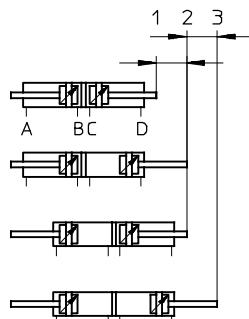

This means that depending on actuation and stroke division, this type of cylinder can assume up to four

positions. In each case the cylinder is driven precisely against a stop. Note that when one end of the piston rod is

fixed, the cylinder barrel executes the movement. The cylinder's connections must be flexible.

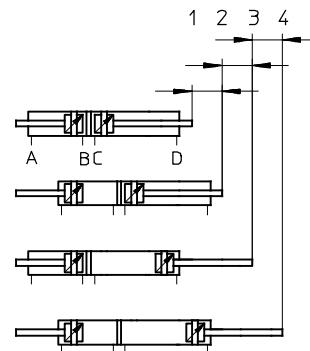

To achieve 3 positions

Two cylinders with identical stroke length must be connected together.

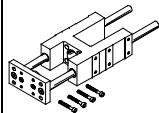

To achieve 4 positions

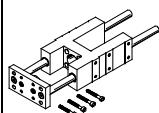

Two cylinders with different stroke lengths must be connected together.
