# Cylinders with displacement encoder

FESTO

Features

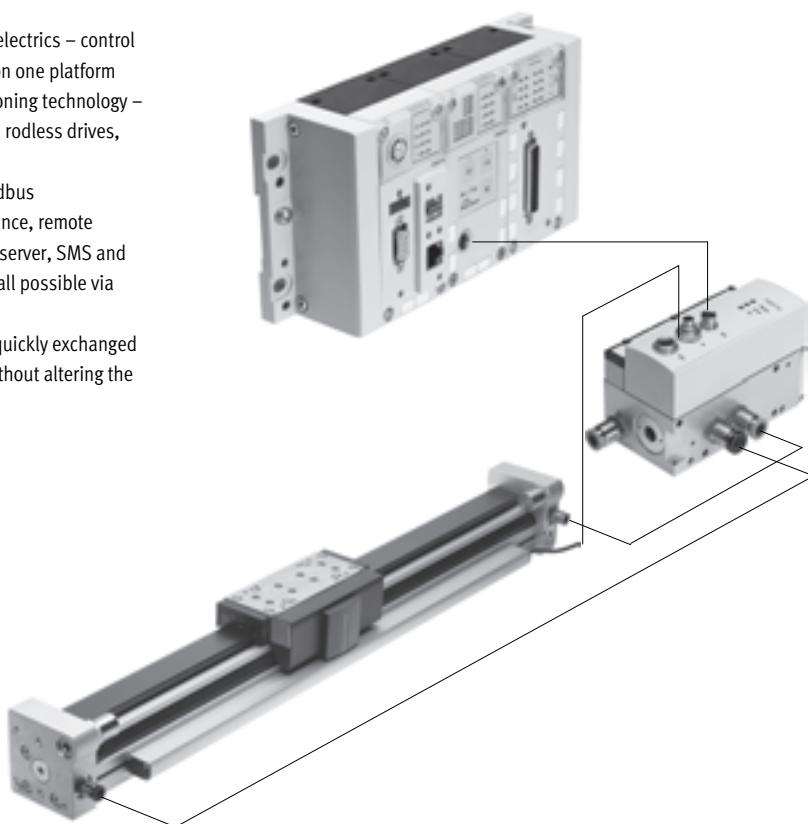

## Servopneumatic drive technology

Positioning and Soft Stop applications as an integral component of the valve terminal CPX – the modular peripheral system for decentralised automation tasks.

The modular design means that valves, digital inputs and outputs, positioning modules and end-position controllers, as appropriate to the application, can be combined in almost any way on the CPX terminal.

### Advantages:

- Pneumatics and electrics – control and positioning on one platform
- Innovative positioning technology – piston rod drives, rodless drives, rotary drives
- Actuation via fieldbus
- Remote maintenance, remote diagnostics, web server, SMS and e-mail alerts are all possible via TCP/IP
- Modules can be quickly exchanged and expanded without altering the wiring

Axis controller CPX-CMAX

### Free choice:

Position and force control, directly actuated or selected from one of 64 configurable position sets. If you are looking for something more: the configurable function for switching to the next set enables simple functional sequences to be realised with the axis controller CPX-CMAX. All stations are recognised as: the auto-identification function identifies each participant with its device data on the controller CPX-CMAX.

### Also included:

The functional scope of the controller CPX-CMAX includes actuation of a brake or clamping unit via the proportional directional control valve VPWP. Up to 8 modules (max. 8 axes) can be operated in parallel and independently of each other. Commissioning via FCT (Festo configuration software) or via fieldbus: no programming, only configuration.

Technical data ➔ Internet: cpx-cmax

### Advantages:

- Greater flexibility
- OEM friendly – commissioning also via fieldbus
- Easy installation and fast commissioning
- Cost-effective
- You program the system in your PLC environment

# Cylinders with displacement encoder

FESTO

## Features

### End-position controller CPX-CMPX

Fast travel between the mechanical end stops of the cylinder, stopping gently and without impact in the end position.  
Fast commissioning via control panel, fieldbus or handheld unit. Improved control of downtime. Actuation of a brake or clamping unit via the proportional directional control valve VPWP is an integral part of the controller CMPX.

Depending on the fieldbus chosen, up to 9 end-position controllers can be actuated on the CPX terminal. All system data can be read and written via the fieldbus, including, for example, the mid positions.

### Technical data → Internet: cpx-cmpx

- Advantages:
- Greater flexibility
  - OEM friendly – commissioning also via fieldbus
  - Easy installation and fast commissioning
  - Cost-effective
    - up to 30% faster cycle rates
    - significantly reduced system vibration
  - Improved work ergonomics thanks to significantly reduced noise level
  - The extended diagnostics help to reduce the service time of the machine

### Proportional directional control valve VPWP

The 5/3-way proportional directional control valve for applications with Soft Stop and pneumatic positioning. Fully digitalised – with integrated pressure sensors, with new diagnostic functions. In sizes 4, 6, 8 and 10. Flow rate of 350, 700, 1400 and 2000 l/min.

With switching output for actuating a brake. Coloured supply ports. Pre-assembled cables guarantee faultless and fast connection with the controllers CPX-CMPX and CPX-CMAX.

### Technical data → Internet: vpwp

- Advantages:
- Easy installation and fast commissioning
  - Reduction of system downtimes thanks to the new diagnostic options
  - With switching output for actuating a brake/clamping unit

### Measuring module CPX-CMIX

Fully digital data acquisition and transmission means that pneumatic cylinders can be used as sensors. With very high repetition accuracy and incorporating both analogue and digital measuring sensors.

Suitable for the linear drive DGCI with displacement encoder for measuring absolute values, for the piston rod drive DNCl/DDPC with incremental displacement encoder or even for a potentiometer of the type MLO.

### Technical data → Internet: cpx-cmix

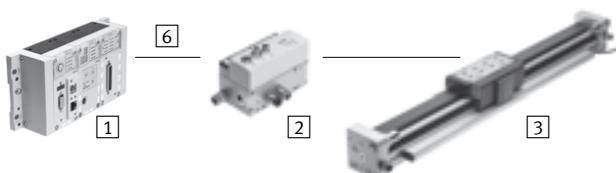

- Advantages:
- All process steps can be documented, which improves quality
  - An adjustable contact force (via pressure regulator) increases the precision of the "displacement sensor"
  - With displacement encoders for measuring absolute values, the actual position is immediately available after the system is switched on

## Cylinders with displacement encoder

Drive options

FESTO

System with linear drive DDLI, DGCI

- [1] Controller module CPX-CMPX or CPX-CMAX
- [2] Proportional directional control valve VPWP
- [3] Linear drive DDLI, DGCI with displacement encoder
- [6] Connecting cable KVI-CP-3...

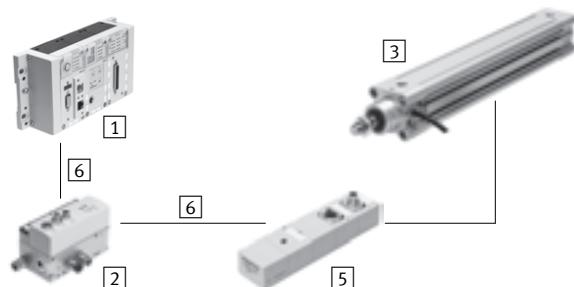

Technical data ➔ Internet: ddli or dgci

- Pneumatic rodless linear drive with displacement encoder, with or without recirculating ball bearing guide
- Displacement encoder with absolute and contactless measurement
- Diameters:
  - DGCI: 18 ... 63 mm
  - DDLI: 25 ... 63 mm
- Stroke: 100 ... 2000 mm in fixed lengths
- Range of applications: Soft Stop and pneumatic positioning
- Loads from 1 ... 180 kg
- No sensor interface required

Advantages:

- Complete drive unit
- DDLI for easy connection to customer's guide system
- Excellent running characteristics
- For fast and accurate positioning down to  $\pm 0.2$  mm (only with axis controller CPX-CMAX)

System with standard cylinder DNCI, DDPC

- [1] Controller module CPX-CMPX or CPX-CMAX
- [2] Proportional directional control valve VPWP
- [3] Standard cylinder DNCI, DDPC with displacement encoder
- [5] Sensor interface CASM-S-D3-R7
- [6] Connecting cable KVI-CP-3...

Technical data ➔ Internet: dnci

- Standard cylinder with integrated displacement encoder, conforms to DIN ISO 6432, VDMA 24 562, NF E 49 003.1 and Uni 10 290
- Displacement encoder with contactless and incremental measuring
- Diameter: 32 ... 100 mm
- Stroke: 100 ... 750 mm
- Range of applications: Soft Stop and pneumatic positioning
- Loads from 3 ... 450 kg and a matching sensor interface CASM-S-D3-R7
- Pre-assembled cables guarantee faultless and fast electrical connection

Advantages:

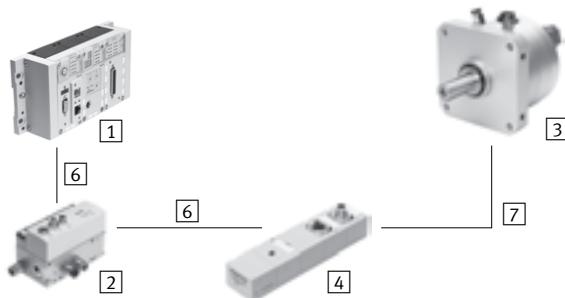

- Compact drive unit
- Can be used universally
- Also with guide unit
- For fast and accurate positioning up to  $\pm 0.5$  mm (only with axis controller CPX-CMAX)

# Cylinders with displacement encoder

**FESTO**

Drive options

System with swivel module DSMI

- [1] Controller module CPX-CMPX or CPX-CMAX
- [2] Proportional directional control valve VPWP
- [3] Swivel module DSMI with displacement encoder
- [4] Sensor interface CASM-S-D2-R3
- [6] Connecting cable KVI-CP-3...
- [7] Connecting cable NEBC-P1W4-K-0,3-N-M12G5

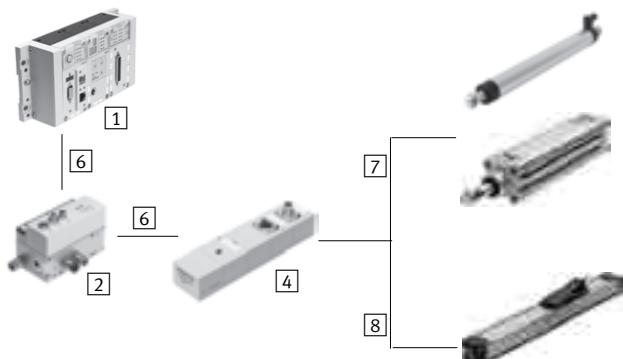

Technical data → Internet: dsmi

- Swivel module DSMI with integrated displacement encoder
- Identical design to pneumatic swivel module DSM
- Absolute displacement encoder based on a potentiometer
- Swivel range of 0 ... 270°
- Size: 25, 40, 63
- Max. torque: 5 ... 40 Nm
- Range of applications: Soft Stop and pneumatic positioning
- Mass moments of inertia from 15 ... 6000 kgcm<sup>2</sup> and a matching sensor interface CASM-S-D2-R3
- Pre-assembled cables guarantee faultless and fast connection with the proportional directional control valve VPWP

Advantages:

- Complete drive unit, compact, can be used immediately
- High angular acceleration
- With adjustable fixed stops
- For fast and accurate positioning down to ±0.2° (only with axis controller CPX-CMAX)

System with potentiometer

- [1] Controller module CPX-CMPX or CPX-CMAX
- [2] Proportional directional control valve VPWP
- [4] Sensor interface CASM-S-D2-R3
- [6] Connecting cable KVI-CP-3...
- [7] Connecting cable NEBC-P1W4-K-0,3-N-M12G5
- [8] Connecting cable NEBC-A1W3-K-0,4-N-M12G5

Technical data → Internet: casm

- Attachable potentiometers with absolute measurement, with high degree of protection
- With connecting rod or moment compensator
- Measuring range:  
Connecting rod: 100 ... 750 mm  
Moment compensator: 225 ... 2000 mm
- Pre-assembled cables guarantee faultless and fast connection with the sensor interface CASM
- Range of applications: Soft Stop and pneumatic positioning with cylinder Ø 25 ... 80 mm, e.g. DNC or DSBC
- Loads from 1 ... 300 kg

Advantages:

- Easy installation and fast commissioning
- Cost-effective
- Can also be used in harsh ambient conditions
- Variety of drives: CPX-CMPX and CPX-CMAX also support cylinders with external displacement encoder

# Linear drives DGCI, with displacement encoder

Key features

FESTO

## At a glance

### [1] Displacement encoder → 18

- High degree of protection IP67
- Non-contacting
- Measures absolute values

### [2] Supply ports → 35

- Optionally on two sides (on the end face or at the front)
- Optionally with different coloured push-in fittings for simple and error-free tubing connections

### [3] End stops → 24

- Metal fixed stop
- Shock absorber, precisely adjustable

### [4] Profile mounting → 22

- Profile mountings remain on the base plate after the drive is dismantled. This saves time during assembly and removal

### [5] Recirculating ball bearing guide → 16

- Piston Ø 18 ... 63 mm
- Stroke lengths 100 ... 2000 mm
- Guide backlash = 0 mm
- For medium and large loads
- Precision mounting interface with stainless steel slide
- Operating behaviour under torque load = very good

### [6] Recirculating ball bearing guide with protected guide → 16

- Piston Ø 18 ... 40 mm
- Stroke lengths 100 ... 2000 mm
- Guide backlash = 0 mm
- The protected guide cleans the guide rail and protects the recirculating ball bearing guide by means of an additional wiper seal and lubrication unit

### - Passive guide axis DGC-FA → dgc-fa

- Without drive
- Piston Ø 8 ... 63 mm
- Stroke lengths 1 ... 5000 mm
- Guide backlash = 0 mm
- Precision guide, suitable for DGCI. Can be used as a machine component or as a twin guide with DGCI

### - Passive guide axis with protected guide DGC-FA-GP → dgc-fa

- Without drive
- Piston Ø 18 ... 63 mm
- Stroke lengths 1 ... 5000 mm
- Guide backlash = 0 mm
- The protected guide cleans the guide rail and protects the recirculating ball bearing guide by means of an additional wiper seal and lubrication unit

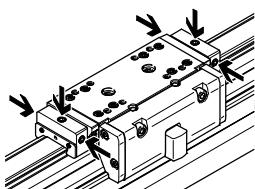

# Linear drives DGCI, with displacement encoder

FESTO

Key features

## Options

### Central lubrication

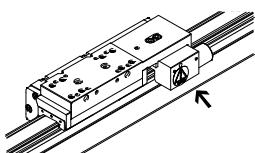

The lubrication adapter enables the guide of the linear drive DGCI to be permanently lubricated in applications in humid or wet ambient conditions using semi or fully automatic relubrication devices.

The adapters are suitable for oils and greases.

- For piston Ø 25, 32, 40, 63 mm
- Connections:
  - On both sides of the slide
  - In three places (front, top, rear) on each side

Technical data ➔ 23

### Clamping unit – 1H-PN

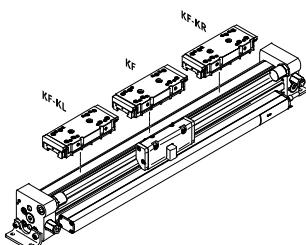

- 1-channel design, for holding loads
- Reliable holding is guaranteed since the forces act directly on the slide
- A limited number of emergency braking operations are permissible with the size 40
- No stroke reduction; the drive is extended by the length of the clamping unit

- For piston Ø 25, 32, 40 mm

Technical data ➔ 21

### Additional slide – KL/KR

- Additional slide, either to the right or left of the main slide
- To increase the torques

- For piston Ø 18, 25, 32, 40, 63 mm

Technical data ➔ 34

### NSF-H1 lubricant for the food industry – H1

The linear drive is of limited suitability for the food industry.

Further information [www.festo.com/sp](http://www.festo.com/sp)  
➔ User documentation

Not approved for use in the food industry:

- DGCI-...-GP (protected version)
- DGCI-... with integrated shock absorbers

## General technical data

Piston Ø	18	25	32	40	63
Design	Rodless linear drive with displacement encoder				
Mode of operation	Double-acting				
Moment compensator principle	Slotted cylinder, mechanically coupled				
Guide	External recirculating ball bearing guide				
Mounting position	Any				
Type of mounting	Profile mounting Foot mounting Direct mounting				
Cushioning	Via metal fixed stop 21 Via shock absorber, self-adjusting at both ends				
Position sensing	Via attached displacement encoder				
Measuring principle (displacement encoder)	Digital, magnetostrictive, non-contacting and absolute measurement				
Pneumatic connection <sup>1)</sup>	M5	G1/8	G1/4	G3/8	
Stroke <sup>2)</sup> [mm]	100; 160; 225; 300; 360; 450; 500; 600; 750; 850; 1000; 1250; 1500; 1750; 2000				
Protected version	Optional				
Max. speed <sup>3)</sup> [m/s]	5				
Stroke tolerance	[mm]	0 ... 2.5			

1) Recommended push-in fittings 44

With pre-assembled push-in fittings, the tubing diameters apply 22

2) Note stroke reduction in combination with CPX-CMAX

3) Only applies to applications with end-position controller CPX-CMPX, SPC11 and axis controller CPX-CMAX. Otherwise a maximum speed of 3 m/s is permitted.

## Operating and environmental conditions

Piston Ø	18	25	32	40	63
Operating pressure [bar]	2 ... 8				
Operating pressure <sup>1)</sup> [bar]	4 ... 8				
Operating medium <sup>2)</sup>	Compressed air according to ISO 8573-1:2010 [6:4:4]				
Note about the operating/pilot medium	Lubricated operation not possible Pressure dew point 10 °C below ambient/medium temperature				
Ambient temperature [°C]	-10 ... +60				
Vibration resistance to DIN/IEC 68, Part 2-6	At 10 ... 58 Hz: 0.15 mm At 58 ... 150 Hz: 2G				
Continuous shock resistance to DIN/IEC 68, Part 2-27	Half sine 15 g, 11 ms				
CE mark (see declaration of conformity) <sup>3)</sup>	To EU EMC Directive				
Certification	C-Tick				
Suitability for use in the food industry <sup>4)</sup>	As per manufacturer's declaration				
Corrosion resistance class CRC <sup>5)</sup>	1				

1) Only applies to applications with end-position controller CPX-CMPX, SPC11 and axis controller CPX-CMAX

2) The proportional directional control valve VPWP, MPYE requires these characteristic values

3) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) User documentation.

If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

4) Additional information [www.festo.com/sp](http://www.festo.com/sp) User documentation.

5) Corrosion resistance class CRC 1 to Festo standard FN 940070

Low corrosion stress. For dry indoor applications or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, and parts which are covered in the application (e.g. drive trunnions).

With shock absorber YSR/YSRW	➔ 21				

## Positioning characteristics with axis controller CPX-CMAX

Piston Ø	18	25	32	40	63
Mounting position	Any				
Resolution [mm]	0.01				
Repetition accuracy [mm]	➔ 19				
Minimum load, horizontal <sup>1)</sup> [kg]	1	2	3	5	12
Maximum load, horizontal <sup>1)</sup> [kg]	15	30	50	75	180
Minimum load, vertical <sup>1)</sup> [kg]	1	2	3	5	12
Maximum load, vertical <sup>1)</sup> [kg]	5	10	15	25	60
Minimum travel speed [m/s]	0.05				
Maximum travel speed [m/s]	5				3
Typical positioning time, long stroke <sup>2)</sup> [s]	0.75/1.15	0.65/1.00	0.65/1.05	0.70/1.05	1.05/1.20
Typical positioning time, short stroke <sup>3)</sup> [s]	0.38/0.65	0.38/0.60	0.38/0.60	0.38/0.60	0.65/0.65
Minimum positioning stroke <sup>4)</sup> [%]	≤ 3				
Stroke reduction <sup>5)</sup> [mm]	20	25	25	35	35
Recommended proportional directional control valve					
For CPX-CMAX	➔ 44				

1) Load = effective load + mass of all moving parts on the drive

2) At 6 bar, horizontal mounting position, DGCI-XX-1000, 800 mm travel at min./max. load

3) At 6 bar, horizontal mounting position, DGCI-XX-1000, 100 mm travel at min./max. load

4) Referred to the maximum stroke of the drive, but never more than 20 mm

5) The stroke reduction is to be maintained on each side of the drive, the max. positionable stroke is therefore: stroke – 2x stroke reduction

## Force control characteristics with axis controller CPX-CMAX

Piston Ø	18	25	32	40	63
Mounting position	Any				
Maximum controllable force <sup>1)</sup> [N]	138	266	435	679	1683
Typical friction forces <sup>2)</sup> [N]	40	60	40	50	70
Repetition accuracy of pressure control <sup>3)4)</sup> [%]	< ±2				

1) Advancing/retracting at 6 bar

2) These values can fluctuate greatly from cylinder to cylinder and are not guaranteed.

These friction forces must also be taken into consideration when using an external guide or when the cylinder is moving other components subject to friction

3) This value defines the repetition accuracy with which the internal differential pressure in the cylinder is controlled and refers to the maximum controllable force (the internal differential pressure corresponds to the prescribed force setpoint value)

4) The effective force at the workpiece and its accuracy depends largely on the friction in the system as well as the repetition accuracy of the internal control system. Note that friction forces always work against the direction of movement of the piston. The following formula can be used as a rule of thumb for the force F at the workpiece:

$$F = F_{\text{setpoint}} \pm F_{\text{friction forces}} \pm \text{repetition accuracy of pressure control}$$

**FESTO**

Positioning characteristics with Soft Stop end-position controller CPX-CMPX, SPC11					
Piston Ø	18	25	32	40	63
Mounting position	Any				
Repetition accuracy <sup>1)</sup> [mm]	±2				
Minimum load, horizontal <sup>2)</sup> [kg]	1	2	3	5	12
Maximum load, horizontal <sup>2)</sup> [kg]	15	30	50	75	180
Minimum load, vertical <sup>2)</sup> [kg]	1	2	3	5	12
Maximum load, vertical <sup>2)</sup> [kg]	5	10	15	25	60
Travel time [s]	→ SoftStop sizing software: → <a href="http://www.festo.com">www.festo.com</a>				
Recommended proportional directional control valve					
For CPX-CMPX	→ 45				
For SPC11	→ 46				

1) One intermediate position. The accuracy in the end positions depends solely on the design of the end stops

2) Load = effective load + mass of all moving parts on the drive

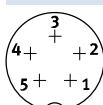

Electrical data – Displacement encoder	
Output signal	Digital
Linearity error <sup>1)</sup> [%]	< ±0.02, min. ±50 µm
Maximum travel speed [m/s]	5
Protection class	IP67
CE marking (see declaration of conformity)	To EU EMC Directive <sup>2)</sup>
Power supply [V DC]	24 (±25%)
Current consumption [mA]	Typically 100
Maximum temperature coefficient [ppm/°K]	15
Electrical connection	Cable with 5-pin plug, round type M9
Cable length [m]	1.5
Cable quality	Suitable for use with energy chains

1) Always refers to max. stroke

2) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) → User documentation.

If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

## Characteristic load values for linear drive with recirculating ball bearing guide and guide

The indicated forces and torques refer to the slide surface and the centre of the slide.

These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

GP – Protected guide

If the drive is simultaneously subjected to several of the forces and torques listed below, the following equation must be satisfied in addition to the indicated maximum loads:

$$\frac{F_y}{F_{y_{max.}}} + \frac{F_z}{F_{z_{max.}}} + \frac{M_x}{M_{x_{max.}}} + \frac{M_y}{M_{y_{max.}}} + \frac{M_z}{M_{z_{max.}}} \leq 1$$

Permissible forces and torques					
Piston Ø	18	25	32	40	63
F <sub>y</sub> <sub>max.</sub> [N]	1850	3050	3310	6890	15200
F <sub>z</sub> <sub>max.</sub> [N]	1850	3050	3310	6890	15200
M <sub>x</sub> <sub>max.</sub> [Nm]	16	36	54	144	529
M <sub>y</sub> <sub>max.</sub> [Nm]	51	97	150	380	1157
M <sub>z</sub> <sub>max.</sub> [Nm]	51	97	150	380	1157

Note

To avoid distortion in the slide, the bearing surfaces of the attachments

must maintain a flatness of 0.01 mm.

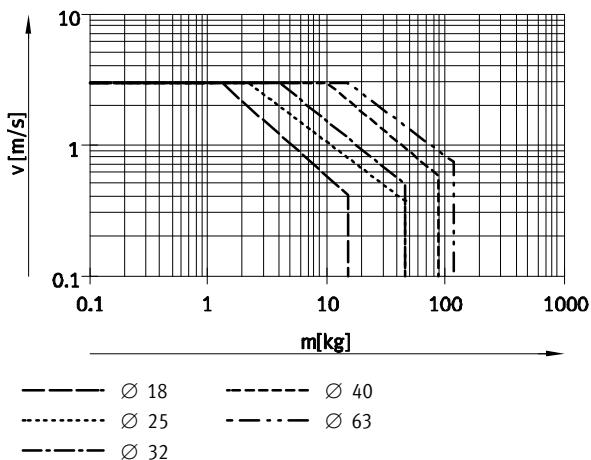

# Linear drives DGCI, with displacement encoder

FESTO

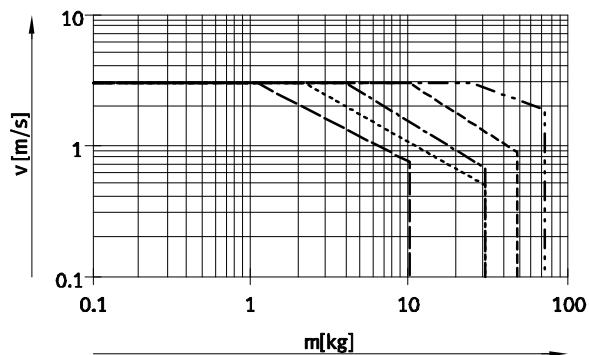

Technical data

## Maximum permissible piston speed with shock absorber v as a function of effective load m

Piston Ø 18 ... 63 with YSR cushioning

Piston Ø 18 ... 63 with YSRW cushioning

This data represents the maximum values that can be achieved. In

practice, values fluctuate relative to the size of the effective load.

Dimensions → 32

## Technical data – Clamping unit

Size	25	32	40
Pneumatic connection	M5	M5	M5
Clamping type	Clamping via spring force, released via compressed air		
Static holding force [N]	320	500	1200
Max. number of emergency braking operations <sup>1)</sup> at reference energy [J]	-	-	750 35
Number of clamping operations under nominal load [million switching cycles]	0.45	0.55	0.05

1) Emergency braking refers to braking the effective load if the drive axis loses power.

## Operating and environmental conditions – Clamping unit

Operating medium	Compressed air according to ISO 8573-1:2010 [7:4:4]	
Operating pressure		
Clamping unit opened [bar]	4.5 ... 8	
Clamping unit closed [bar]	Pressureless	
Ambient temperature [°C]	-10 ... +60	

No stroke reduction in combination with the clamping unit; the drive is

extended by the length of the clamping unit.

## Central lubrication

The lubrication adapter enables the guide of the linear drive DGCI to be permanently lubricated in applications in humid or wet ambient conditions using semi or fully automatic relubrication devices.

- For piston Ø 25, 32, 40, 63
- The modules are suitable for oils and greases
- The dimensions of the linear drive DGCI are the same with and without central lubrication modules
- Both lubrication adapters must be connected

- There are three connection options on each side
- Can be used in combination with:
  - Standard slide GK
  - Additional slide KL, KR
- Cannot be used in combination with:
  - Protected recirculating ball bearing guide GP

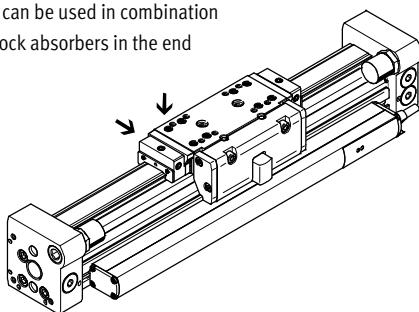

Slide dimensions

→ 30

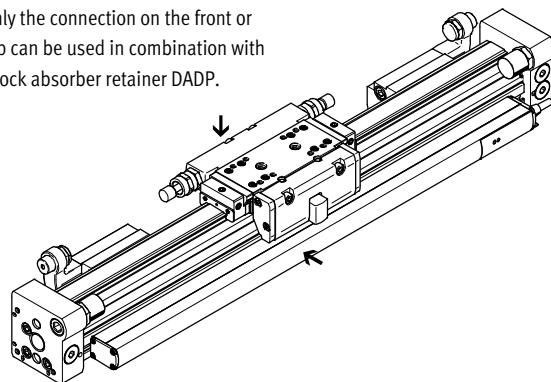

Order code C in the modular product system → 37

## Connection options

Only the connection at the rear or on the top can be used in combination with shock absorbers in the end caps.

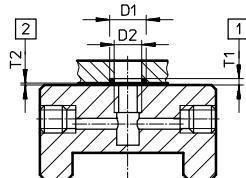

Only the connection on the front or top can be used in combination with shock absorber retainer DADP.

## Connection option for customer design

The drawing opposite shows the connection option on the top lubrication interface using a customer design.

D1 8<sup>+0.2</sup> mm

[2] Required air gap

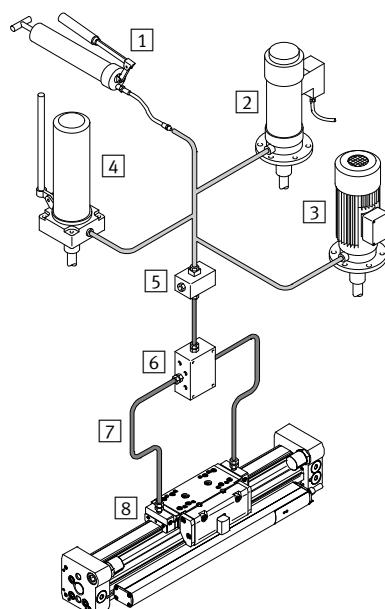

Additional dimensions → 30

## Structure of a central lubrication system

A central lubrication system requires various additional components. The illustration shows different options (using a hand pump, pneumatic container pump or electric container pump) required as a minimum for designing a central lubrication system. Festo does not sell these additional components; however, they can be obtained from the following companies:

- Lincoln
- Bielomatik
- SKF (Vogel)

Festo recommends these companies because they can supply all the necessary components.

- [1] Hand pump
- [2] Pneumatic container pump
- [3] Electric container pump
- [4] Manually operated container pump
- [5] Nipple block
- [6] Distributor block
- [7] Tubing or piping
- [8] Fittings

# Linear drives DGCI, with displacement encoder

FESTO

Technical data

## Dimensions

1H – With clamping unit

Download CAD data ➔ [www.festo.com](http://www.festo.com)

### Size 40

- - Note

Total length L1 with stroke = 0 mm ➔ 25

In case of subsequent installation/modification, note that the dimension H1 is bigger on a linear drive with clamping unit.

[1] Supply port  
[2] Lubrication adapter

Type	B1	B2	B3	B4	H1	H2	H3	D1	D2	L2	L3	L4	L6

# Linear drives DGCI, with displacement encoder

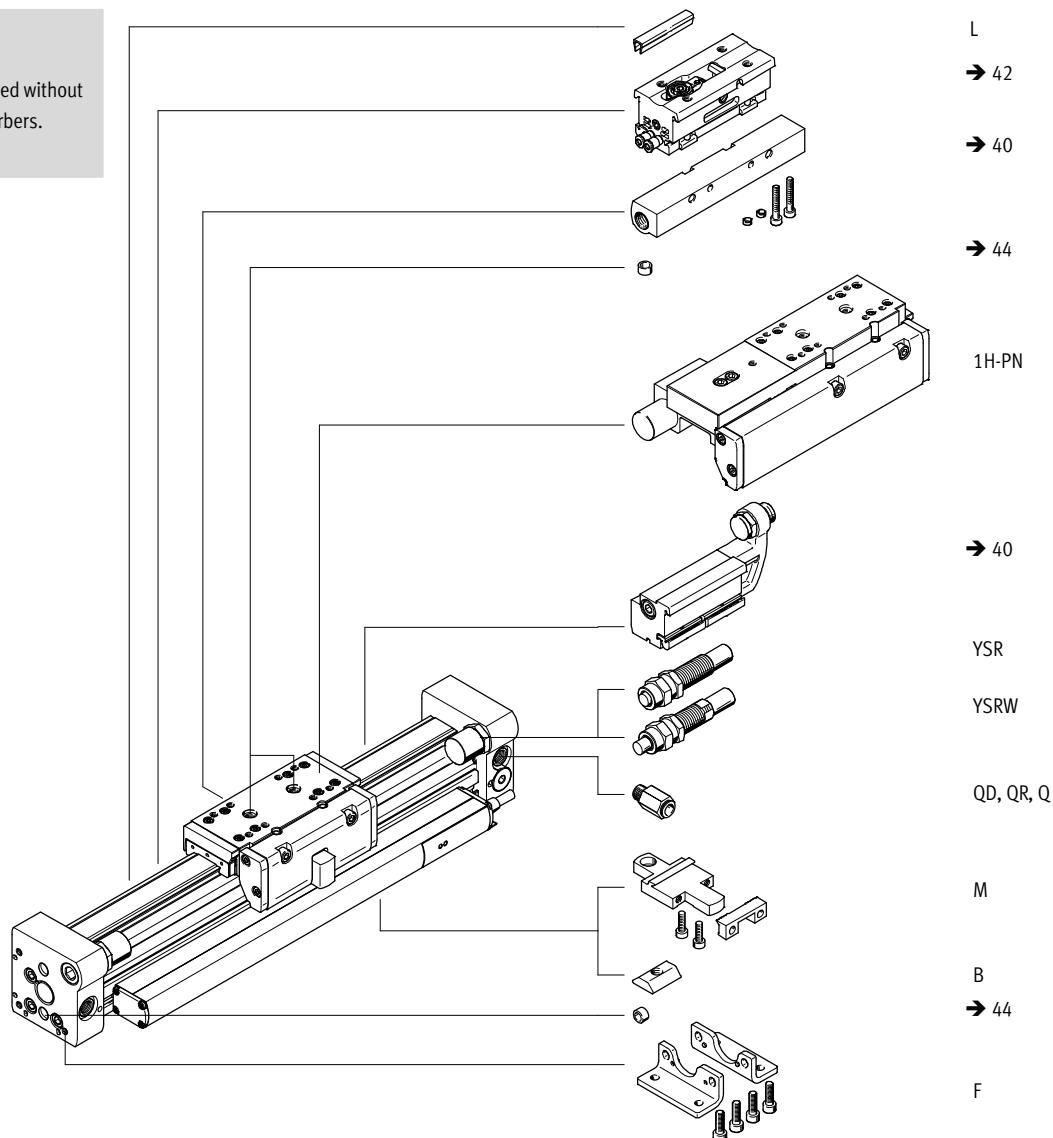

Ordering data – Modular products

**FESTO**

## Order code

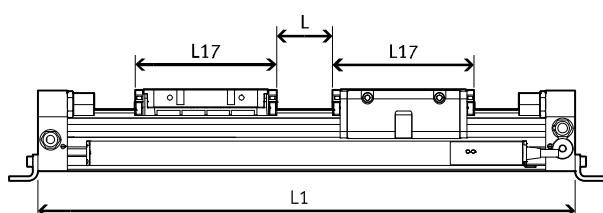

Note  
Drive must not be operated without end stops or shock absorbers.

## Effective stroke reduction when ordering an additional slide KL or KR

For a linear drive DGCI with additional slide, the effective stroke is reduced by the length of the additional slide and the distance between both slides.

∅ [mm]	L17	
	DGCI-...-KF	DGCI-...-KF-...-GP
18	99	120
25	118.5	144
32	145.7	173
40	195.4	231
63	280	–

Given:  
DGCI-18-500-...  
L = 20 mm  
L17= 99 mm

The effective stroke is reduced to  
 $381 \text{ mm} = 500 \text{ mm} - 20 \text{ mm} - 99 \text{ mm}$

# Linear drives DGCI, with displacement encoder

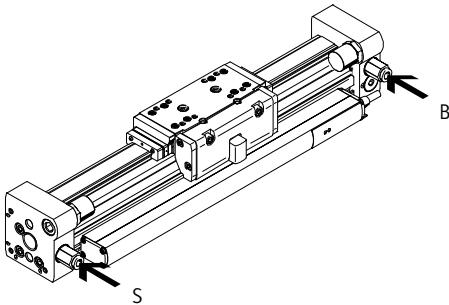

FESTO

Ordering data – Modular product

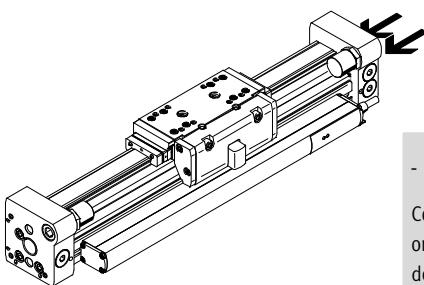

## Order code – Alternative supply port

Four different supply port options (see below) can be selected when ordering the linear drive.

Push-in fitting at both ends, front (standard)  
DGCI-...

Push-in fitting at one end, end face  
DGCI-...-QR

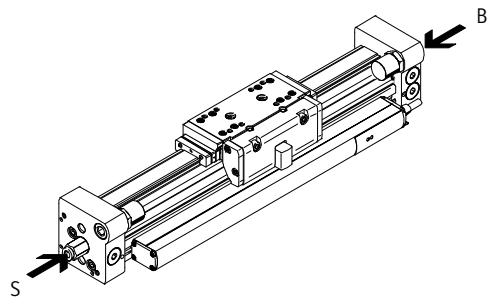

Note  
Compressed air supply at one end is only recommended for strokes up to 600 mm.

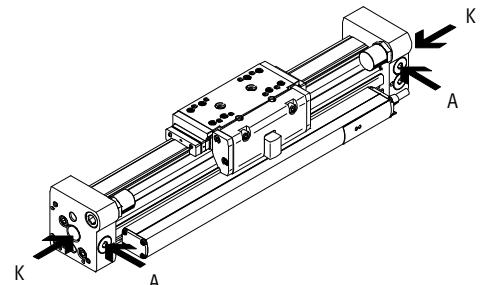

coloured push-in fittings (black or blue release ring) and without push-in

fittings in the case of the variant DGCI-...-Q.

Push-in fitting at both ends, end face  
DGCI-...-QD

No push-in fitting, end face open  
DGCI-...-Q

## Direction of movement of the slide:

S To the right:  
Fitting with black release ring

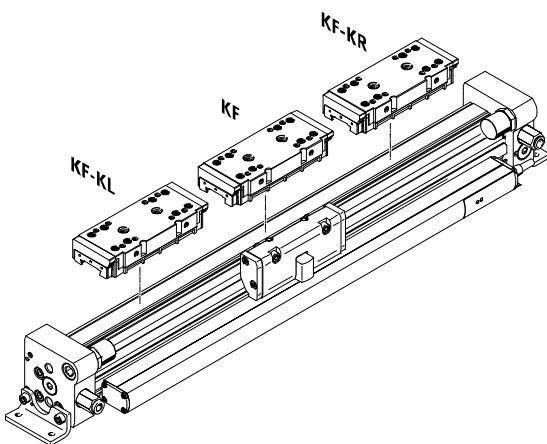

B To the left:  
Fitting with blue release ring

## Alternative port option

K Supply ports open      A Supply ports sealed

## Order code

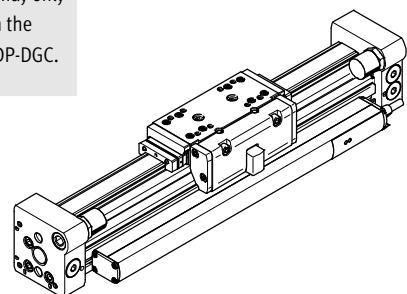

KL/KR – With additional slide

GP – With protected recirculating ball bearing guide

Note

In the case of the variant with GP, only fixed stops may be used in the end caps. Shock absorbers may only be used in combination with the shock absorber retainer DADP-DGC.

## Intermediate position module DADM-DGC

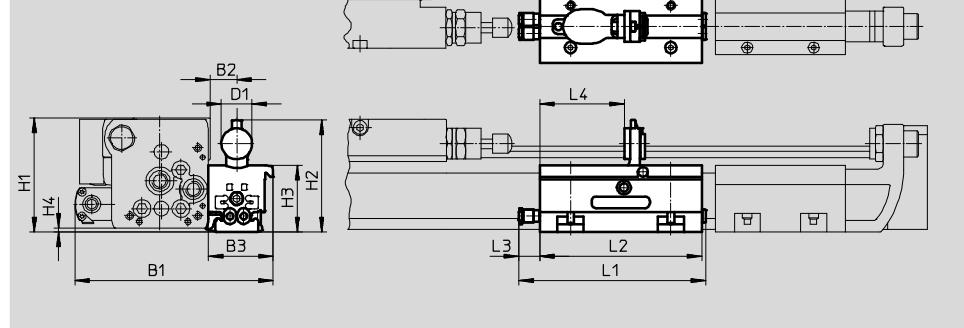

### Materials:

Housing: Anodised aluminium  
Stop screw, nut: Galvanised steel

### Bracket, lever:

High-alloy steel  
Free of copper and PTFE

### Note

- Shock absorbers are not included in the scope of delivery.  
Existing shock absorbers can be removed from the end caps of the linear drive and installed in the shock absorber retainer.  
Under no circumstances may the

linear drive and the intermediate position module be operated without a shock absorber.  
A shock absorber retainer DADP-DGC and a stop KYC are additionally needed when using an intermediate position module.

- The projection (dimension H4) must be observed when using the drive in combination with the intermediate position module DADM-DGC.  
Mounting via foot mountings HPC or profile mountings MUC is recommended in this case.

## Product Range and Company Overview

### A Complete Suite and Company Overview

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

**Custom Automation Components**  
Complete custom engineered solutions

**Custom Control Cabinets**  
Comprehensive engineering support and on-site services

**Complete Systems**  
Shipment, stocking and storage services

### The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

**Electromechanical**  
Electromechanical actuators, motors, controllers & drivers

**Pneumatics**  
Pneumatic linear and rotary actuators, valves, and air supply

**PLCs and I/O Devices**  
PLC's, operator interfaces, sensors and I/O devices

### Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 16,000 employees in 60 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

### Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
