

Parallel kinematic system EXPT, tripod

FESTO

Parallel kinematic system EXPT, tripod

Key features

FESTO

At a glance

The high-speed handling unit with robot functionality for free movement in three dimensions provides precision in movement and positioning as well as a high dynamic response of up to 150 picks/min.

The highly rigid mechanical design and low moving mass make the parallel delta kinematic system with toothed belt axes up to three times as fast as comparable Cartesian systems.

Three double rods keep the front unit horizontal at all times. The axes and servo motors do not move with the unit.

The parallel kinematic system is suitable for handling loads of up to max. 5 kg.

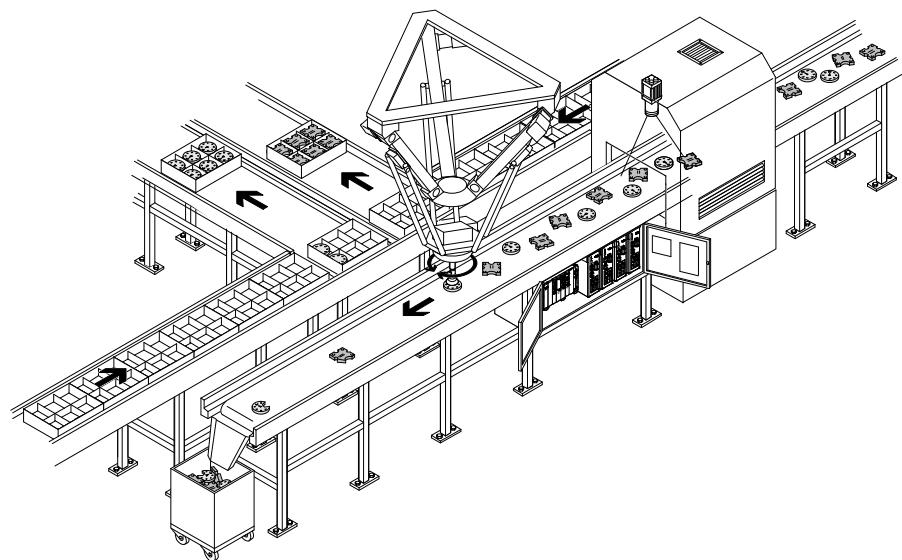

Typical applications include:

- Picking & placing small parts
- Bonding
- Labelling
- Palletising
- Sorting
- Grouping
- Repositioning and separating

Comparison between parallel kinematic and Cartesian systems

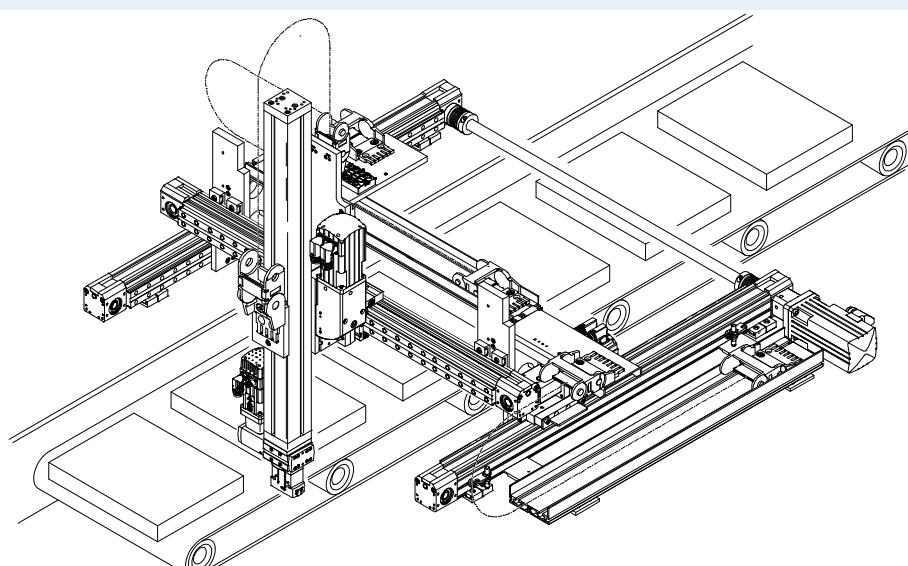

Parallel kinematic system

- Low moving mass – ideal for demanding requirements on dynamic response in three dimensions
- High path accuracy with a range of path profiles, even for highly dynamic operation
- Four sizes with a working space diameter of up to 1200 mm

Cartesian system

- Axes build on one another; the first axis carries all the subsequent axes
- High moving mass, therefore much lower dynamic response
- Rectangular, scalable working space
- Based on standard components
- Flexible designs

FESTO

Key features

The technology in detail

Parallel kinematic system

- | | |
|--|--|
| [1] Mounting frame | [7] Angle kit → 33 |
| [2] Mounting bracket for toothed belt axis | [8] Protective conduit → 33 |
| [3] Motor | [9] Toothed belt axis |
| [4] Connection block | [10] Tubing holder → 33 |
| [5] Rod pair | [11] Front unit for attaching a gripper, etc. → 24 |
| [6] Interface housing | |

Front unit

→ 24

The front unit can optionally be ordered via the modular product system.

It includes a geared motor that enables rotary movement (fourth axis) and is available in two sizes.

The front unit can also be chosen with or without rotary throughfeed, for vacuum or excess pressure.

A range of grippers can be attached to it → 34.

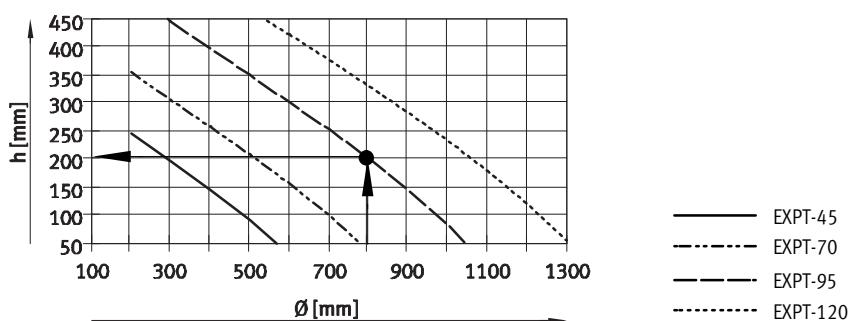

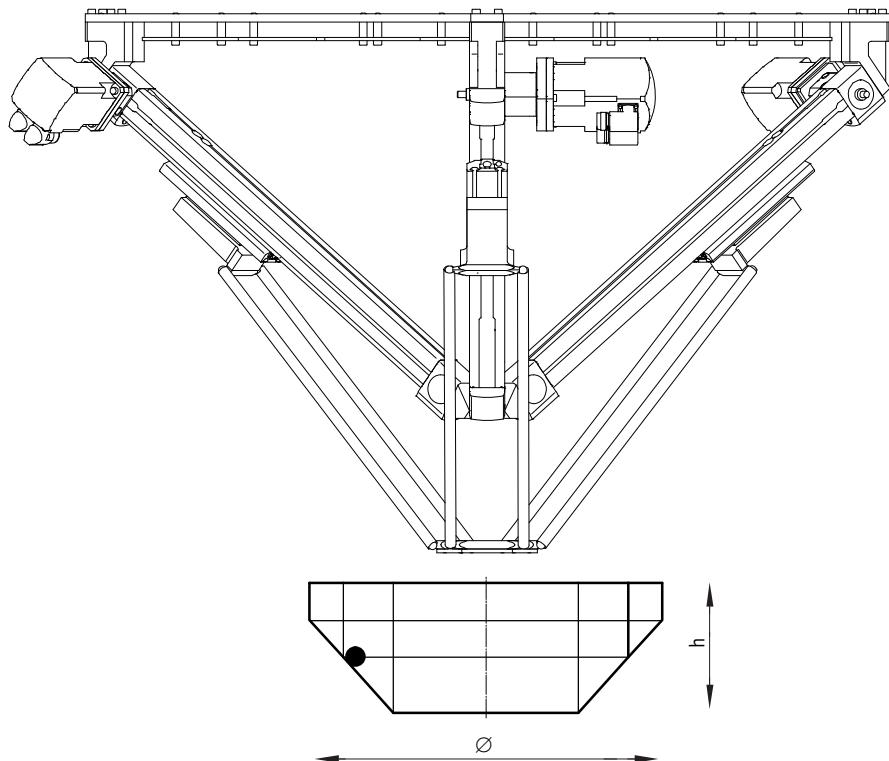

Parallel kinematic system EXPT, tripod

Key features

FESTO

Available working space

There are four sizes available with different working space diameters.
In simplified terms, the possible working space can be described using the shape of a cylinder (→ drawing).
The more working space required, the smaller its diameter (→ graph).

Parallel kinematic system EXPT, tripod

FESTO

Key features

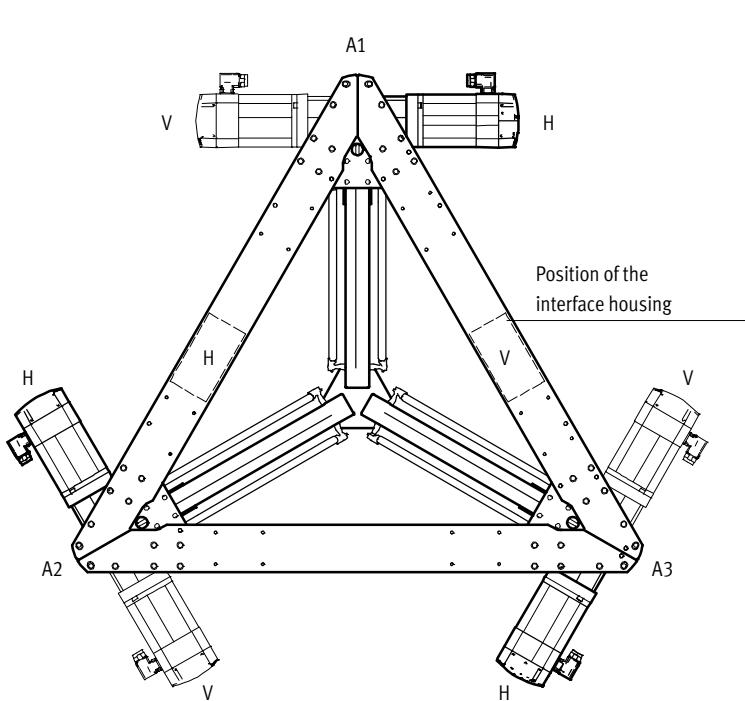

Motor attachment variants

The attachment position of the motors can be individually configured via the modular product system (→ 30).
The standard motor attachment position corresponds to code HHH (cf. illustration below). This means: A1/A2/A3 rear.

If a motor is to be attached on the front, a 'V' must be specified in the order code for the respective axis.

The position of the interface housing depends on the position of the motor (V or H) on axis A1.

| Code | Description |
|------|----------------------|
| HHH | A1/A2/A3 rear |
| HHV | A3 front; A1/A2 rear |
| HVH | A2 front; A1/A3 rear |
| HVV | A2/A3 front; A1 rear |
| VHH | A1 front; A2/A3 rear |
| VHV | A1/A3 front; A2 rear |
| VWH | A1/A2 front; A3 rear |
| WV | A1/A2/A3 front |

Parallel kinematic system EXPT, tripod

Key features

FESTO

Protection against particles for size 95 and 120

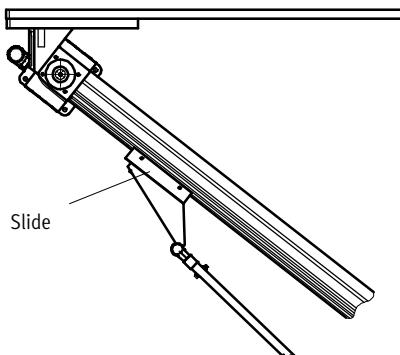

Installation type: Protected version (P8)

Abrasion on the toothed belt can lead to loose particles falling into the working space in the standard design.

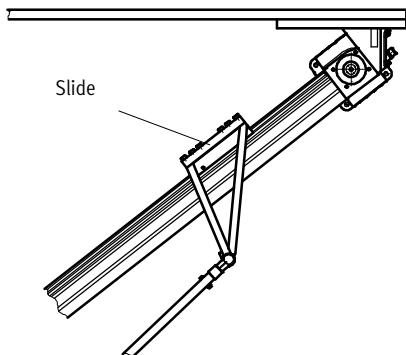

If the variant EXPT-...-P8 (→ 30) is selected, the axes are turned during installation (slide on top). A cover kit EASC-E10 (→ 33) can be additionally ordered as a

separate accessory and fitted; this prevents the particles from entering the working space. They slide downwards into the trough and collect in the cover (see below).

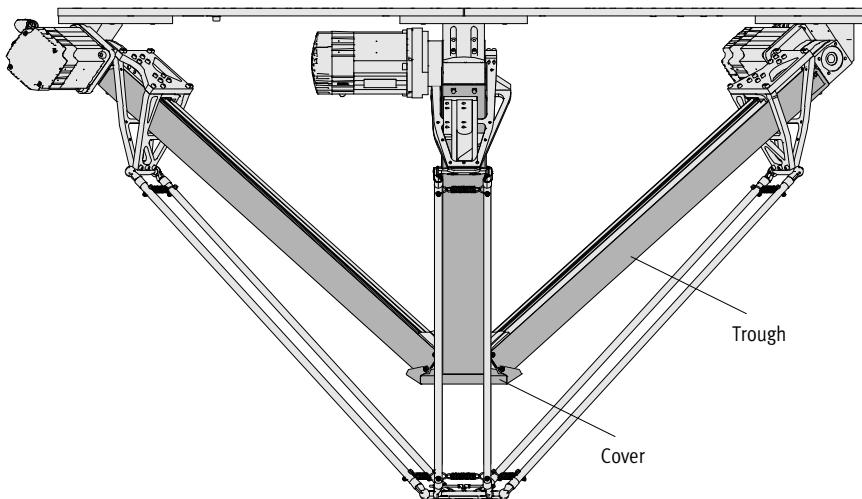

Standard

Protected version (P8)

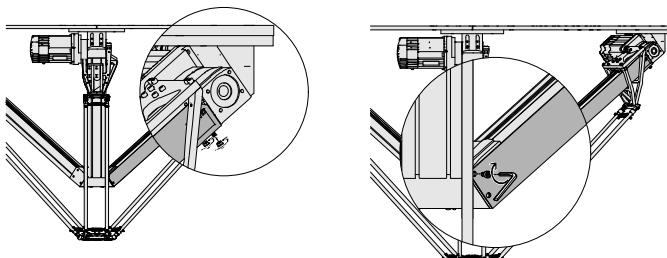

Protected version (feature P8 in the modular product system) with cover kit EASC-E10 (ordered separately as an accessory)

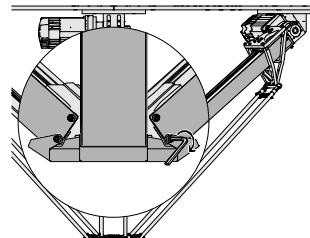

Easy mounting of the cover kit EASC-E10

Mounting of the troughs

Mounting of the cover

Parallel kinematic system EXPT, tripod

FESTO

Key features

Control systems CMCA

The control system CMCA complements the parallel kinematic system EXPT.

It is available in two versions:

- Mounting plate
- Mounting plate in a control cabinet housing

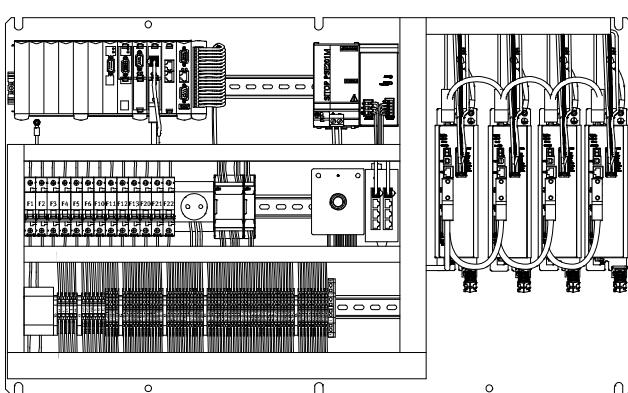

It can be ordered either via the modular product system → 30 or separately

→ Internet: CMCA

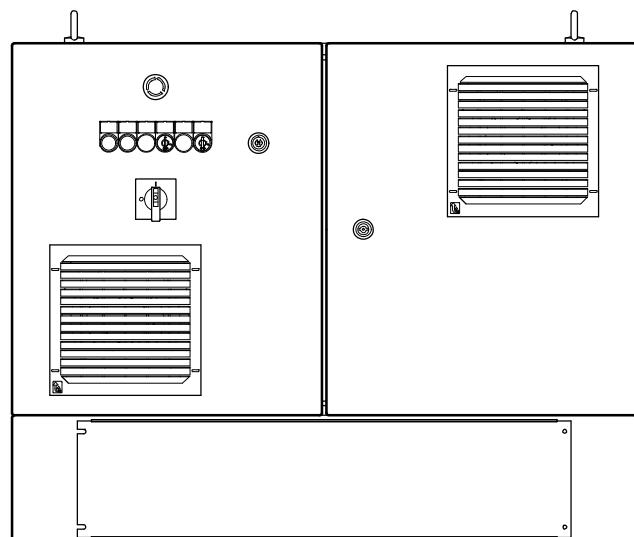

The control system includes the multi-axis controller CMXR and motor controller CMMP required for activation. There is also an integrated safety circuit, which together with the teach pendant CDSA establishes the basic functionality. The version with the control cabinet housing also features control elements and fans in the door.

The control system CMCA is pre-programmed and already tested together with the relevant parallel kinematic system.

Mounting plate

Mounting plate in the control cabinet housing

Relationship between the order code of the parallel kinematic system EXPT and the control system CMCA

Depending on the configured parallel kinematic system EXPT

- With or without front unit
- Control system variant
- Controller type

The following order codes are available for the control system CMCA.

Allocation table

Rod loss detection

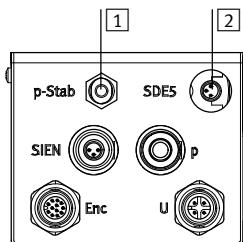

The rod loss detection feature detects detached rods and initiates an emergency stop.

It is realised via permanent compressed air monitoring (pressure switch integrated in the frame of the interface housing)

This is done by pressurising the ball cup connections of the front unit with compressed air at 2 bar (rel.).

Connections on the interface housing:

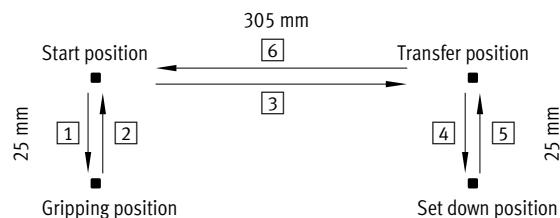

[1] Compressed air supply for rod loss detection.
The compressed air is adjusted to 2 bar in the interface housing.

[2] Pressure sensor for monitoring rod loss detection.
Connecting cable → 32

Pick rate as a function of nominal load

The characteristic values for dynamic response are determined in so-called 12" cycles. The graph below shows the maximum number of possible cycles as a function of nominal load. It is based on an accuracy of ±0.5 mm.

- One 12" cycle means:
1. To the gripping position
 2. To the start position
 3. To the transfer position
 4. To the set down position
 5. To the transfer position
 6. To the start position

Requirements for the frame

The positioning and path accuracy depends to a large extent on the frame design.

The following influences must therefore be taken into consideration:

- Frame rigidity
- Mass of frame
- Mass of parallel kinematic system

- Start-up frequency caused by dynamic operation of the parallel kinematic system
 - Cycles per minute
 - Dynamic settings for acceleration and jerk

Maximum forces occur if two axes accelerate in the opposite direction to the third and result in horizontal movement of the nominal load. The frame must be designed so that the maximum forces that can occur as a result of the parallel kinematic system can be absorbed with the necessary degree of certainty.

The guide value for the first natural frequency is specified to be at least 16 Hz for the complete system.

At maximum dynamic response for the axes, the following forces act on the corner bracket and therefore on the mounting in the frame.

| Size | 45 | 70 | 95 | 120 |
|----------------------|------|------|------|------|
| Vertical force [N] | ±250 | ±290 | ±325 | ±475 |
| Horizontal force [N] | ±145 | ±150 | ±200 | ±215 |

Mounting options on the frame

The parallel kinematic system must always be mounted in the area of the corner bracket of the mounting frame. Ensure that the corner bracket area has a torsionally rigid, flat bearing surface.

The bearing surface must meet the following minimum requirements in order to achieve the positioning accuracy:

- Flatness = 0.05 mm
- Parallelism = 0.5 mm

Since the distance between slots is 40 mm in the 80x80 profile, the holes in the corner brackets have been positioned so that the profile can be mounted in various positions.

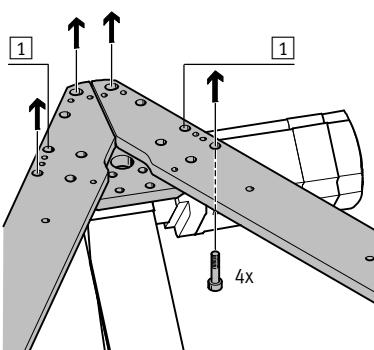

Since the homing settings of the axis are lost when the motor is dismounted, it is recommended to use mounting holes that do not require the motor to be removed. The holes **[1]** are not accessible, depending on the attachment position of the motor.

Direct mounting via screws

Screws M8x...

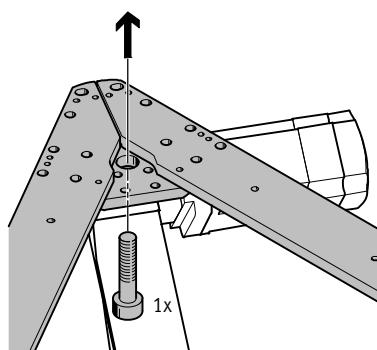

Via at least 4 screws (M8) per corner bracket directly on the frame. These 4 screws should be placed as far apart

as possible to ensure a torsionally rigid connection.

Screws M20...

Via 1 screw (M20) per corner bracket directly on the frame. There is a central hole on each corner for this purpose.

FESTO

Dimensions

Interference contour within the nominal operating area

Download CAD data → www.festo.com

- [1] Interference contour
- D3 Diameter of interference contour
- D4 Diameter of nominal operating area
- H7 Height of nominal operating area
- H9 Distance from bottom edge of gripper plate to base of nominal operating area

- - Note

The distance specification for the working space refers to the bottom edge of the gripper plate. With the variants T1 to T4, the working space is extended downwards by the dimension H8. The same applies to attached gripper systems, where the reference point is always shifted by the height of the gripper system. Additional dimensions for laying the motor cables and tubing are not taken into account in the interference contour.

1 If no control system (mounting plate (C) or control cabinet (CC)) is selected, there will be no motor controller included in the scope of delivery for the parallel kinematic system EXPT.

2 The motor and encoder cables for the rotary drive (attachment components) are always 15 m long, regardless of the specification in the modular product system.

Note

To order a parallel kinematic system, please get in touch with your local Festo contact.

The parallel kinematic system may only be commissioned by a specially trained technician (robotics specialist).

The following knowledge is required:

- Specialist knowledge of robotics and CODESYS
- Knowledge of handling motor controllers CMMP and multi-axis controllers CMXR
- Knowledge of handling parallel kinematic systems

Product Range and Company Overview

A Complete Suite and Company Overview

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drivers

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 16,000 employees in 60 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
