Service unit combinations MSE6, MSE series

Key features

Overview

Product description

The MSE6-E2M is an intelligent pneumatic service unit for optimising the use of compressed air as an energy medium in industrial automation technology.

Equipped with measurement, control and diagnostic functions, the

MSE6-E2M supports energy-efficient operation of pneumatic systems. The MSE6-E2M detects increased compressed air consumption in the standard production cycle which may be caused by leakages, for example, and enables targeted system

maintenance. Furthermore, the MSE6-E2M detects when the production plant is in a standby state and stops the supply of compressed air in order to prevent unnecessary compressed air consumption.

The MSE6-E2M can also be used as a process monitoring module by enabling flow and pressure values to be transferred directly to the machine controller via a fieldbus connection, where they can be analysed.

Product features

Control function (energy efficiency function)

- Automatic shut-off when flow rate is not achieved
- User-controlled shut-off and pressurising

Recording and provision of measurement data

- Output pressure
- Pressure change (for pressure tightness testing)
- Flow
- Air consumption

Limit monitoring

- Pressure, upper limit value
- Pressure change, upper limit value
- Flow, upper limit value

Fieldbus connection

- PROFIBUS

Installation

The module is typically assembled behind a service unit combination.

Structure

The main components of the MSE6-E2M are: shut-off valve, flow sensor, pressure sensor and bus node. The fieldbus interface allows complete integration into a machine controller. As an alternative to networked communication, the MSE6-E2M can also be operated using an external operator unit or a PC.

Service unit combinations MSE6, MSE series

Key features

Functions

Standby detection and automatic shut-off of the compressed air supply

The MSE6-E2M uses settable parameters to detect when the production system is down. The system is separated from the compressed air supply using a 2/2-way shut-off valve, without exhausting the downstream system. This avoids additional air consumption through leakages. If production is to continue on the

system, then this must be signalled to the MSE6-E2M. The shut-off valve opens and the system is again supplied with compressed air. Automatic shut-off of the compressed air supply can be activated and deactivated by the user. In the deactivated state, the shut-off valve can be controlled directly by the PLC.

Pressure tightness testing

When in the shut-off state, the MSE6-E2M measures the pressure curve over time. Even in well-maintained systems, the pressure falls continuously due to leakages. The fewer leakages the system has, the slower the pressure

drop will be. The measured pressure change serves as a measure of the leakage existing in the system. If the parameterised limit value is exceeded, then the device will output a diagnostic message.

Pressure recording

The MSE6-E2M continuously measures the output pressure, prepares the data and makes it available cyclically. To detect high operating pressures, the MSE6-E2M offers the option of parameterising limit values for pressure. If the parameterised limit value is exceeded, then the device will output a diagnostic message.

Flow recording

The MSE6-E2M continuously records the flow, prepares the data and makes it available cyclically. To detect high flow rates, the MSE6-E2M offers the option of parameterising limit values for the flow. If the parameterised limit value is exceeded, then the device will output a diagnostic message.

Consumption recording

The MSE6-E2M determines the compressed air consumption by recording the system flow rate. The user has the option of using appropriate signalling to record the compressed air consumption over a specific period of time.

Note

If there is an error (e.g. fieldbus interruption, PLC failure, no voltage) on the MSE6-E2M, then the 2/2-way shut-off valve switches to the initial position (pressurise). If there is a

shut-off valve upstream, the system is pressurised suddenly. Use suitable counter measures to prevent unintentional pressurisation of the system in the event of an error.

Accessories	➔ Page/Internet
[1] Operator unit CPX-MMI-1	8
[2] Connecting cable KV-M12-M12	8
[3] Plug FBS-SUB-9	8

Type codes

MSE 6 - E2M - 5000 - FB13 - AGD

Series	
MSE	Modular standard, electric
Size	
6	Grid dimension 62 mm
Function	
E2M	Energy saving (2/2-way function DE, V24)
Flow measuring range	
5000	5000 l/min
Electrical actuation/inputs and outputs	
FB13	Bus node for PROFIBUS DP
Pneumatic connection	
AGD	Connecting plate G½

Service unit combinations MSE6, MSE series

Technical data

MSE6-E2M

consisting of

- Energy efficiency module
 - 2/2-way shut-off valve, open, single-solenoid
 - Flow sensor
 - Pressure sensor for output pressure
 - Control unit for processing measuring data, activating valves and controlling energy efficiency functions
- Fieldbus node

General technical data

Pneumatic connection 1, 2	G1/2 (connecting plate)
Mounting position	Horizontal $\pm 5^\circ$
Flow direction	Unidirectional P1 → P2
Valve function	2/2-way shut-off valve, open, single-solenoid
Reset method	Mechanical

Electrical data

System supply

Electrical connection	Plug M18x1, 4-pin
Operating voltage range for actuator technology [V DC]	18 ... 26.4
Operating voltage range for electronics/sensors [V DC]	18 ... 30
Current consumption for actuator technology [mA]	Max. 100 when valve is fed with current
Current consumption for electronics/sensors at 24 V [mA]	Max. 300
Protection against incorrect polarity	For operating voltage connection
Degree of protection	IP65 with plug socket
Duty cycle [%]	100

Fieldbus connection

Fieldbus interface	Sub-D socket, 9-pin
--------------------	---------------------

Standard nominal flow rate qnN1

Pneumatic port	G1/2
In main flow direction 1 → 2 [l/min.]	4500

1) Measured at p1 = 6 bar and p2 = 5 bar, $\Delta p = 1$ bar

Service unit combinations MSE6, MSE series

Technical data

Operating and environmental conditions	
Operating pressure [bar]	4 ... 10
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]
Note on operating/pilot medium	Lubricated operation not possible
Ambient temperature [°C]	0 ... +50
Temperature of medium [°C]	0 ... +50
Storage temperature [°C]	-10 ... +60
Corrosion resistance class CRC ¹⁾	2
CE marking (see declaration of conformity)	To EU EMC Directive ²⁾ To EU Low Voltage Directive

- 1) Corrosion resistance class CRC 2 to Festo standard FN 940070
 Moderate corrosion stress. Indoor applications in which condensation may occur. External visible parts with primarily decorative requirements for the surface and which are in direct contact with the ambient atmosphere typical for industrial applications.
- 2) For information about the applicability of the component see the manufacturer's EC declaration of conformity at: www.festo.com/sp ➔ User documentation.
 If the component is subject to restrictions on usage in residential, office or commercial environments or small businesses, further measures to reduce the emitted interference may be necessary.

Display/operation	
Flow measurement	
Flow measurement range [l/min.] initial value	50
Flow measurement range final [l/min.] value	5000
Accuracy of flow rate	+/- (3% o.m.v. + 0.3% FS) ¹⁾
Displayable unit(s)	l/min (presetting) scfm
Pressure measurement	
Pressure measuring range [bar] starting value	0
Pressure measuring range [bar] final value	14
Accuracy FS1) [%]	3
Displayable unit(s)	mbar (presetting) kPa psi
Consumption measurement

Product Range and Company Overview

A Complete Suite and Company Overview

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.

Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services

Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drivers

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!

Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 16,000 employees in 60 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications

Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.
