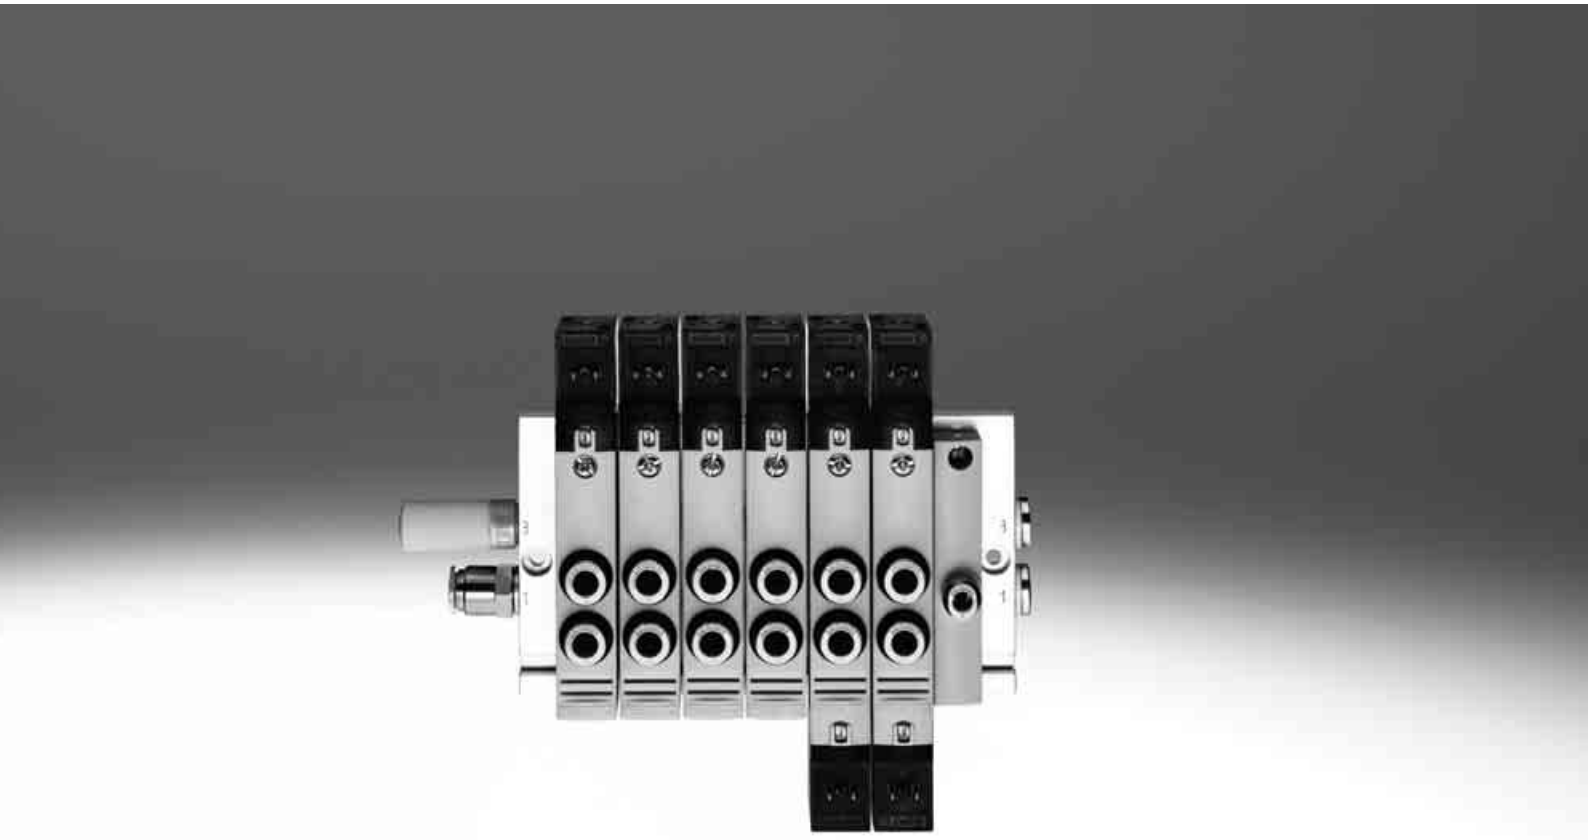
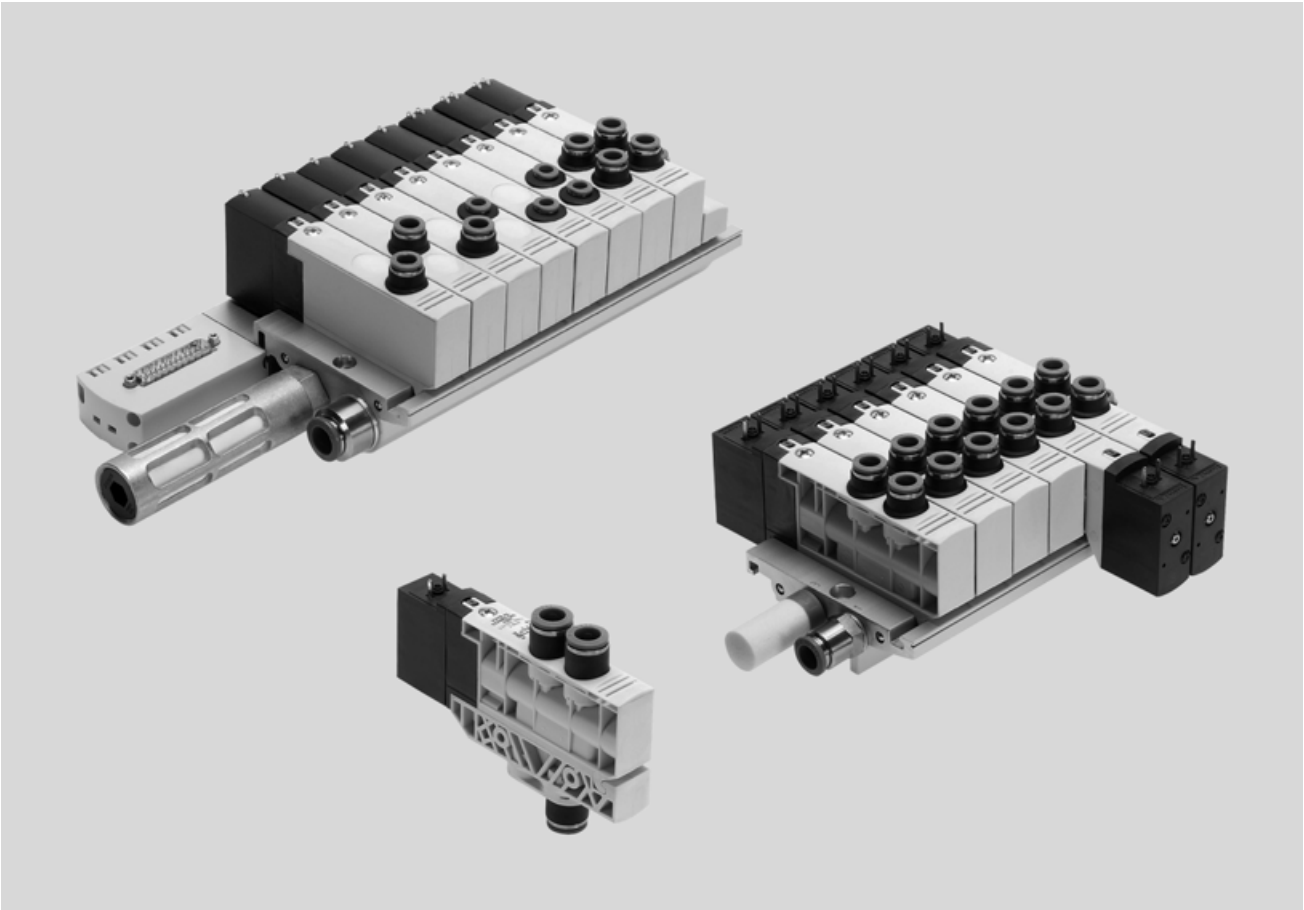
Solenoid valves VUVB/valve terminals VTUB, NPT

FESTO



Solenoid valves VUVB/valve terminals VTUB, NPT

Key features



Innovative

- Valve terminal for a wide range of pneumatic applications
- Standardised from the individual valve to the multi-pin plug
- Great flexibility during planning, assembly and operation
- Selectable valve functions; 3/2- and 4/2-way function also suitable for vacuum applications
- Wide selection of optimally tailored accessories for flow rates from 200 to 1,000 l/min

Versatile

- Room for expansion with 2 ... 10 valve positions on one valve terminal
- Use of individual valves in combination with an individual sub-base
- Flexibility of the pneumatic working lines provides a practical solution to different requirements
- Two pressure zones (additional zones on request)
- High pressure range –0.9 ... 8 bar
- Extensive operating voltage range from 12 V DC to 230 V AC

Reliable

- Manual override
- Durable thanks to tried-and-tested piston spool valves
- Sturdy thanks to the polymer housing and metal manifold rail
- Fast troubleshooting thanks to an LED signal status display in the plug socket with cable or on the valve in the case of the design with multi-pin plug

Easy to mount

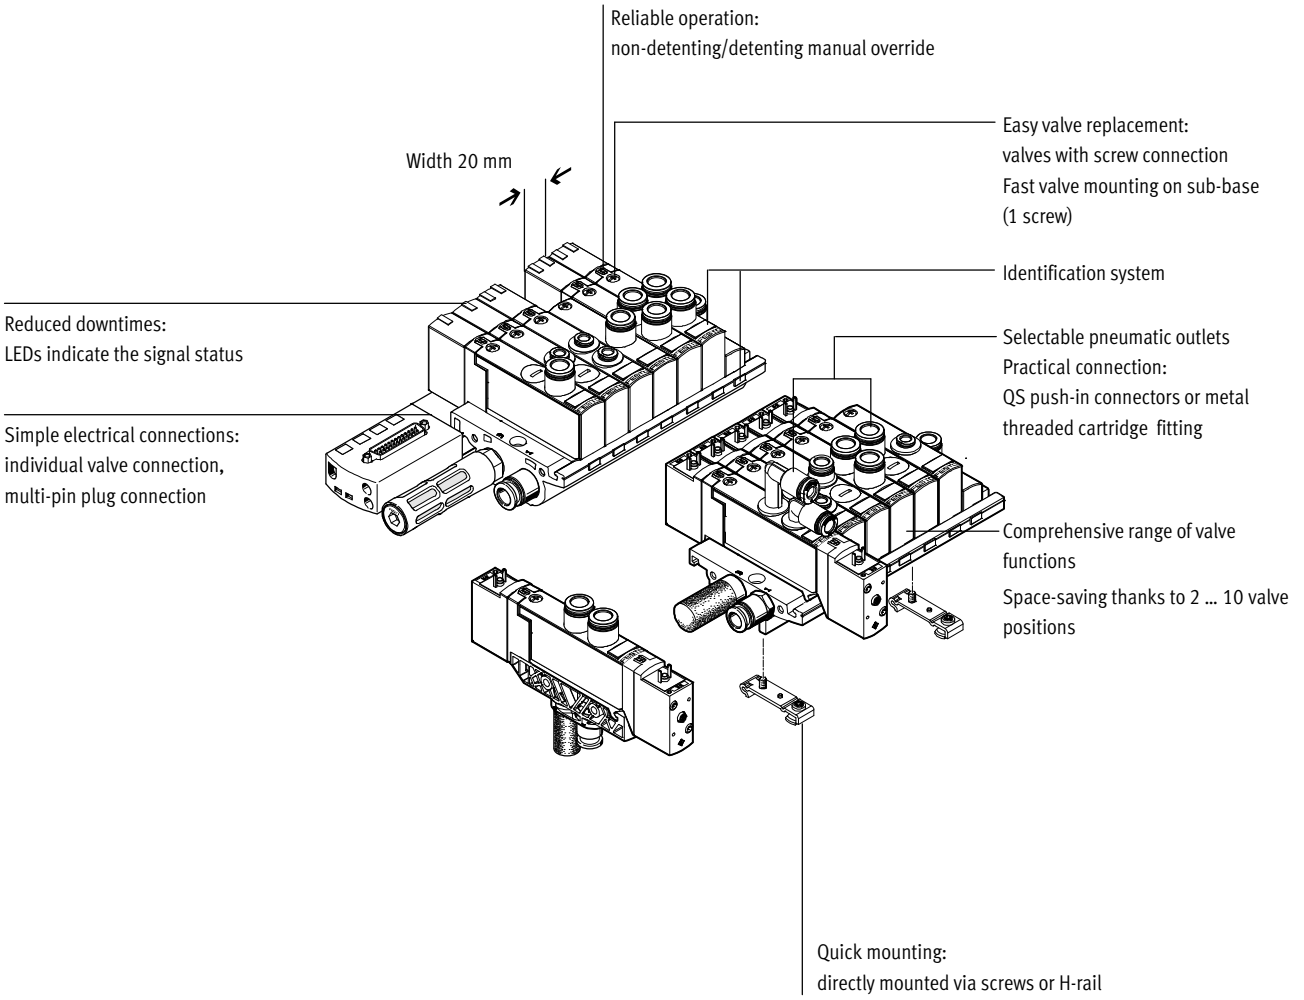
- Ready-to-install and tested unit
- Lower ordering, installation and commissioning costs
- Secure mounting on wall or H-rail

Note

Valve terminals are available for 4, 6, 8 and 10 valve positions in connection sizes ½ NPT and ¼ NPT.

Solenoid valves VUVB/valve terminals VTUB, NPT

Key features



Equipment options

Valve functions

- 3/2-way valve, normally open
- 3/2-way valve, normally closed
- 4/2-way valve, single solenoid
- 4/2-way valve, double solenoid

Electrical connection options

Individual connection/individual valve connection

- 2 ... 10 valve positions with manifold rail
- 2 ... 20 solenoid coils
- Via plug socket with cable with either LED or illuminating seal

Multi-pin plug

- 4 ... 10 valve positions/ max. 20 solenoid coils
- Sub-D

Valve terminal configurator

Download CAD data ➔ **www.festo.com**

A valve terminal configurator is available to help you select a suitable valve terminal VTUB, which makes it much easier to order the right product. Valve terminals VTUB are ordered via an ident. code.

All valve terminals are supplied fully assembled and individually tested. This reduces assembly and installation time to a minimum.

Ordering system for valve terminal VTUB

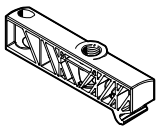
- Individual electrical connection
- Electrical multi-pin plug connection

➔ Internet: vtub

Solenoid valves VUVB/valve terminals VTUB, NPT

Key features

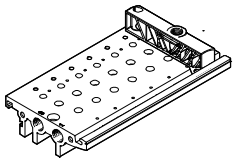
Pressure zone supply module



The pressure zone supply module for pilot air supply is included in the scope of delivery of the manifold rail.

The pressure zone supply module for internal or external pilot air supply ensures even greater flexibility.

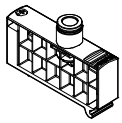
Manifold rail



The manifold rail features a groove into which the semi in-line valves are latched and secured with just one screw.

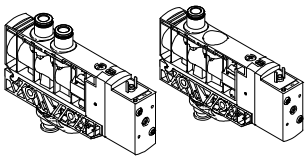
The valve functions 4/2-way single solenoid, 4/2-way double solenoid, 3/2-way normally closed and 3/2-way normally open are available. All semi in-line valves are available with the cartridges QSP for the tubing diameters ¼, 5/16, and ⅜. 4/2-way valves are also supplied without cartridges, allowing users to fit cartridges of their choice or blanking plugs.

Pressure zone supply module



The pressure zone supply module occupies one valve position and can be used as an additional supply or for supplying a pressure zone.

Individual valve



An individual valve can be ordered as an in-line valve (comprising semi in-line valve and sub-base ready assembled) in all functions. The tubing diameters ¼ and 5/16 are available in this case. The in-line valve, however, can also be assembled using an individual sub-base and semi in-line valve. All tubing diameters and the variant without cartridge are available in this case.

Blanking plate

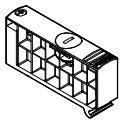


Plate without valve function for reserving valve positions on a valve terminal.

Valves and blanking plates are attached to the manifold rail using one screw.

Sub-base

Individual sub-bases can be equipped with any valve.

Electrical connection is by means of a standardised connector plug, square design to EN 175301-803, type C.

Pre-assembled plug sockets with cable or plugs for self-assembly are offered for this.

Pneumatic connection

Supply and exhaust

The valves are supplied pneumatically via manifold rails or individual sub-bases.

The manifold rails contain common lines for compressed air supply, exhaust and pilot exhaust for all valves.

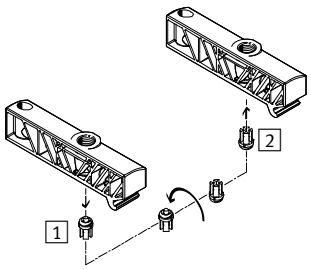
The common lines can be connected
- at the left (code L),
- at the right (code R) or
- at both ends (no code).

Pilot air supply

In-line valves are available with internal and external pilot air supply. With semi in-line valves the mounting position of the insert in the sub-base determines whether the valves are actuated internally or externally.

Internal pilot air supply
An internal pilot air supply can be selected if the supply pressure is between 2 and 8 bar. The pilot air supply is branched from duct 1 in the pressure zone supply module in this case.

External pilot air supply
An external pilot air supply must be used if the supply pressure is between –0.9 and +2 bar. The pilot air supply is supplied via duct 12/14 of the pressure zone supply module in this case.



If the selector is installed as shown in position 1, it means that the pilot air supply will be branched internally from duct 1.

If the selector is turned 180° and installed as shown in position 2, it means that the valve manifold is set to external pilot air supply.

Solenoid valves VUVB, NPT

Peripherals overview

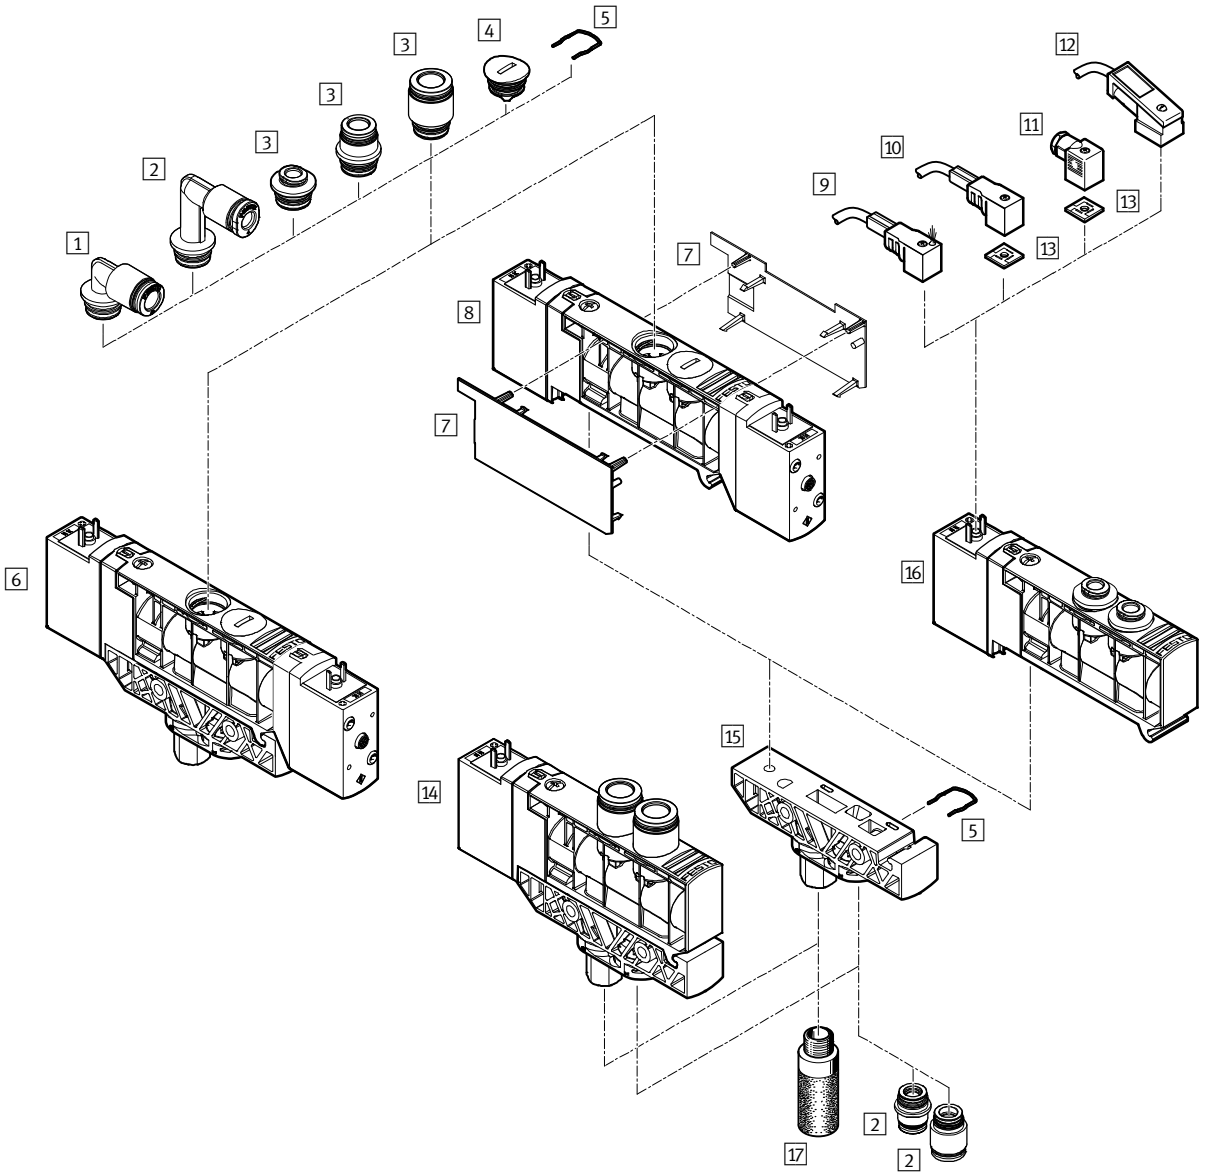
Overview – Solenoid valve VUVB

Individual position with individual electrical connection

These peripherals are ordered via individual parts/accessories.

An individual valve can be ordered as an in-line valve or as a fully assembled semi in-line valve on a sub-base.

The in-line valve is available with ¼NPT or 5/16NPT push-in connectors. The semi in-line valve on sub-base is available with ¼, 5/16 or 3/8NPT push-in connectors or as a variant without a cartridge.



Solenoid valves VUVB, NPT

Peripherals overview

Overview – Solenoid valve VUVB

Manifold assembly/valve terminal with individual electrical connections

- "Individual connection" code: ET

Valve terminals with individual electrical connections are available in gradations from 2 to max. 10 valve positions.

Valve positions can either be fitted with a valve or a blanking plate for future expansions.

In total up to 20 solenoid valves can be actuated.

	Semi in-line valve	[g]	150	150	220

Operating and environmental conditions		
Operating medium		Compressed air in accordance with ISO 8573-1:2010 [7:4:4]
Note on operating/pilot medium		Operation with lubricated medium possible (in which case lubricated operation will always be required)
Operating pressure	[bar]	–0.9 ... +8
Operating pressure for valve terminal with internal pilot air supply	[bar]	2 ... 8
Pilot pressure	[bar]	2 ... 8
Ambient temperature	[°C]	–5 ... +50
Temperature of medium	[°C]	–5 ... +50
Corrosion resistance class CRC		1 [1)]
Note on materials		RoHS-compliant

1) Corrosion resistance class 1 according to Festo standard 940 070
Components subject to low corrosion stress. Transport and storage protection. Parts that do not have primarily decorative surface requirements, e.g. in internal areas that are not visible or behind covers.

Note

A filter must be installed upstream of valves operated in vacuum mode.
This prevents any foreign matter in the intake air getting into the valve
(e.g. when operating a suction cup).

Overview – Valve terminal VTUB

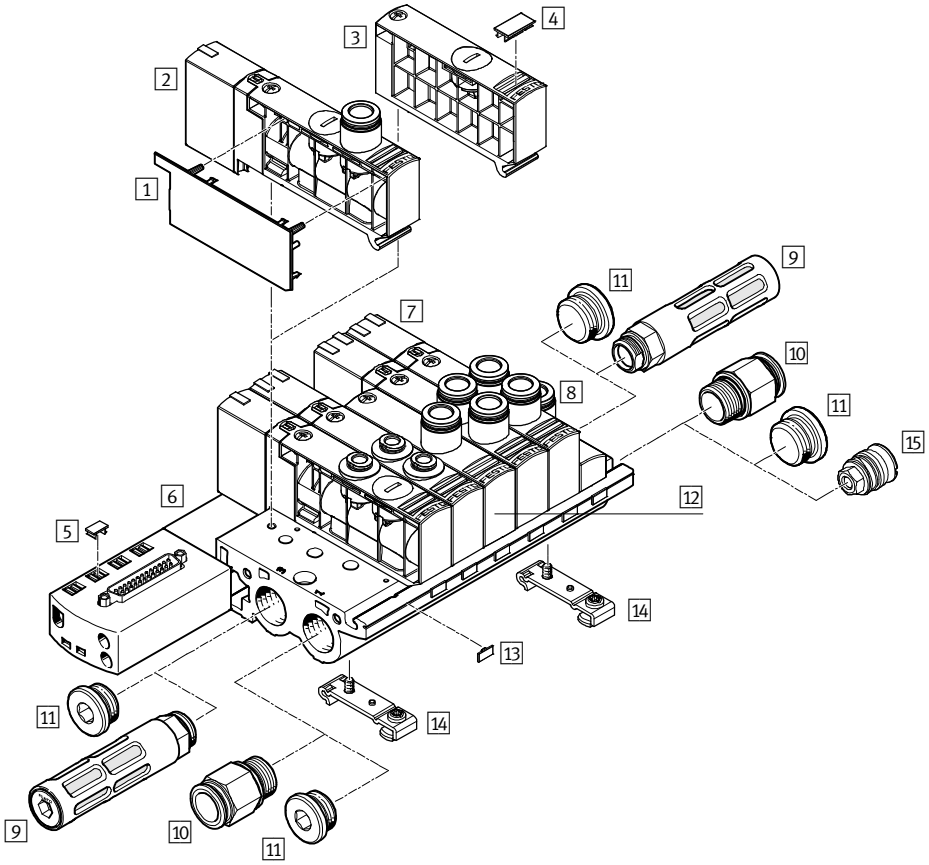
Valve terminal with electrical multi-pin plug connection

- 25-pin Sub-D multi-pin plug connection
  Code: SD

Valve terminals with electrical multi-pin plug connection are available in gradations from 2 to max. 10 valve positions.

Each valve position can either be equipped with a valve or a blanking plate.

A maximum of 20 solenoid coils can be actuated via the electrical multi-pin plug connection.



Note

Valve terminals are available for 4, 6, 8 and 10 valve positions in connection size ½ NPT.

Accessories			
		Brief description	**➔ Page/Internet**
1	Cover for valve housing VAMC	–	45
2	Single solenoid valve VUVB-...-M-–	–	34

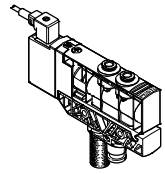
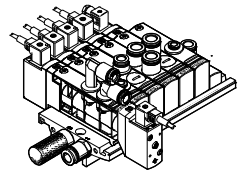
15	Separator for pressure zones VABD	For mounting in the manifold rail	LEERER MERKER

Valve terminals VTUB, NPT

Key features

Individual connection



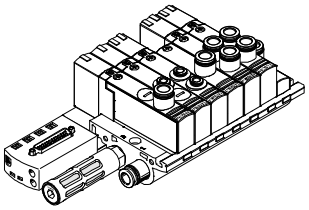


Connection is independent of the control technology used and is flexible thanks to pre-assembled cables. There are two different valve types; in-line valves and semi in-line valves for manifold rails or individual sub-bases.
Between 2 ... 20 solenoid coils (divided between 2 ... 10 valve positions) can be selected with individual connection.

Valves can be used on individual sub-bases for actuators further away from the valve terminal.
With an individual electrical connection, the plug is connected directly to the valve. A number of plug sockets/plug sockets with cable can be selected for the valve terminal and for the individual sub-base:

- KMEB-1-...-LED with signal status display
- KMEB-1-230AC-... can be used up to 230 V AC
- MSSD-EB for self-assembly
- KMEB-2-24-... with signal status display
- Illuminating seal MEB-LD for signal status display

Multi-pin plug connection



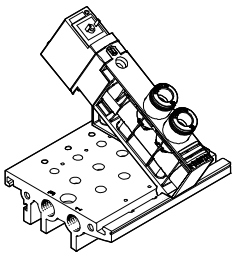
Control signals from the controller to the valve terminal are transmitted via a pre-assembled multi-core cable, which substantially reduces installation time.

This valve terminal can be equipped with 4 ... 10 valves.

Versions
- Sub-D connection

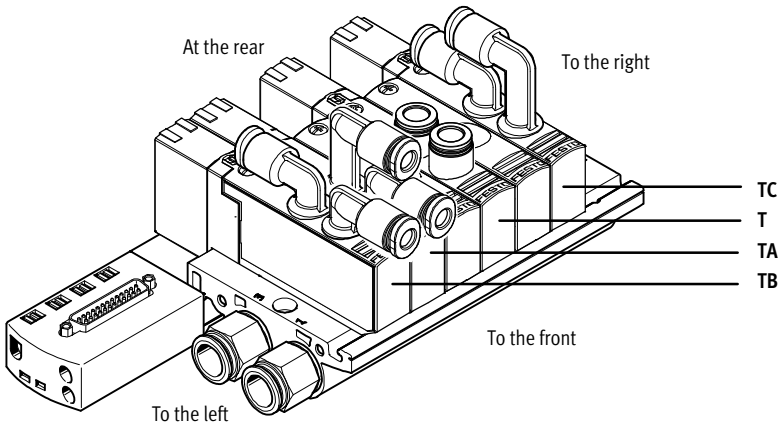
Double solenoid drive with multi-pin plug connection. The valve is equipped with an LED for signal status display.

Wide range of pneumatic components



- Using the same basic valves for both the individual valves and the valve manifold permits fast and flexible conversion and multiple use of parts.
- Flexible construction thanks to assembled and tested units or individual components as modules for individual configurations.
- Flow rates from 200 ... 1,000 l/min depending on the respective application through the selection of appropriate QS connections.

Connection to the valve



Connection positions on valve:
- T (on top, straight)
- TA (on top, angled outlet to the front)
- TB (on top, angled outlet to the front/rear)
- TC (on top, angled outlet to the rear)

Connection sizes for connection position T:
- Push-in connector 4 mm (code P4)
- Push-in connector 6 mm (code P6)
- Push-in connector 8 mm (code P8)
- Push-in connector 10 mm (code P10)

Connection sizes for connection position TB/TA/TC:
- Push-in connector 4 mm (code P4)
- Push-in connector 6 mm (code P6)
- Push-in connector 8 mm (code P8)

Instructions for using pressure zones

The valve terminal VTUB can be operated with 2 pressure zones, supplied either from the left or from the right. Pressure zones are created by means of separators that can be used in the following ducts:

- Supply duct 1 (code TP)
  or
- Supply duct 1
  and exhaust duct 3 (code TS) or
- Exhaust duct 3 (code TR)

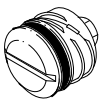
Duct separation

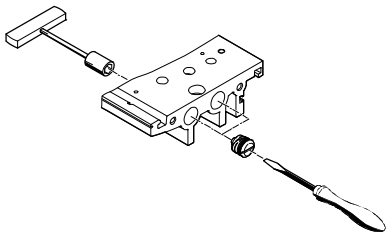
	Code	Description
 1 Pressure zone 1 2 Pressure zone 2	TP	Duct 1 closed
 1 Pressure zone 1 2 Pressure zone 2	TS	Duct 1/3 closed
 1 Pressure zone 1 2 Pressure zone 2	TR	Duct 3 closed

Separator VABD-B6

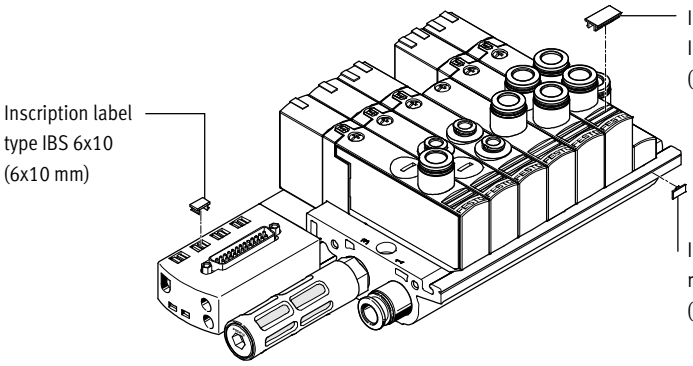
Note

The separator can also be fitted subsequently using a screwdriver/ socket spanner.





Identification system



Inscription labels can be applied to the valves and manifold rails to identify them.

- Inscription labels for valve type IBS-9x17
  Part No. 161937
- Inscription labels for manifold rail type MH-BZ-80X
  Part No. 197259

Display and operation

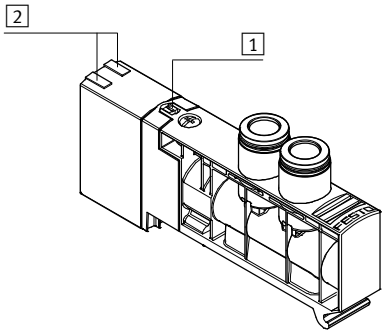
Each solenoid coil can be allocated an LED which indicates its signal status. Suitable plug sockets with cable can be found on page 49. On the multi-pin variant the LED is integrated in the valve.

The manual override (MO) enables the valve to be activated without electronic control or power supply.

The valve is activated by pushing the manual override. The set switching status can be secured by rotating the manual override.

- Note

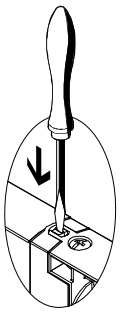
A manually actuated valve (manual override) cannot be reset electrically. Conversely, an electrically actuated valve cannot be reset using the mechanical manual override.



1 Optional manual override (pushing and detenting via turning using a screwdriver)
2 LED signal status display per solenoid coil

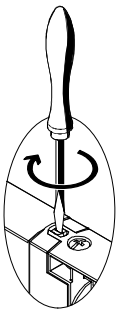
Manual override (MO)

MO with automatic return (non-detenting)



Press in the stem of the MO with a pin or screwdriver.
⇢ Valve is in switching position
Remove the pointed object or screwdriver.
Spring force pushes the stem of the MO back.
⇢ Valve returns to normal position.

MO with detent (turning with detent)[1)]



Press in the stem of the MO using a pin or screwdriver until the valve switches and then turn the stem clockwise by 90° until the stop is reached.
⇢ Valve remains in switching position.
Turn the stem anti-clockwise by 90° until the stop is reached and then remove the pin or screwdriver.
Spring force pushes the stem of the MO back.
⇢ Valve returns to normal position.

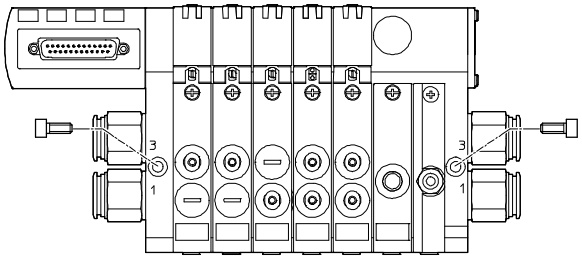
1) Not with double solenoid valve code J for electrical multi-pin plug connection (double solenoid valve)

Mounting – Valve terminal

Sturdy terminal mounting thanks to:

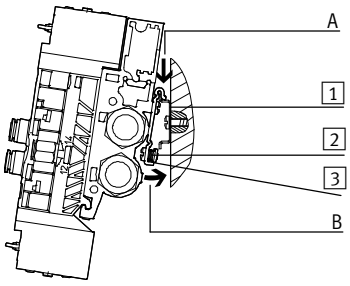
- Two through-holes for wall mounting
- Integrated attachment for H-rail mounting

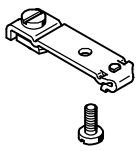
Wall mounting



The VTUB valve terminal is screwed onto the mounting surface using two M5 screws.

H-rail mounting





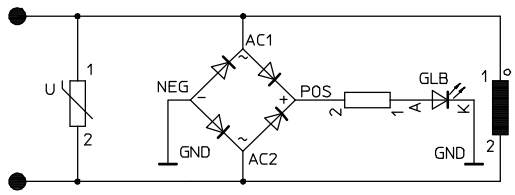
The valve terminal VTUB is hooked onto the H-rail (see arrow A).
The valve terminal VTUB is then swivelled on the H-rail and secured in place with the clamping component (see arrow B).

1 H-rail
2 Self-tapping M4x8 screw of the H-rail clamping unit
3 Clamping component of the H-rail clamping unit

For H-rail mounting of the valve terminal you will need the mounting kit VAME-B6-T. This permits mounting of the valve terminal on an H-rail to EN 60715.

Protective circuits for plug-in valves for multi-pin terminals

24 V DC version for single solenoid valve



24 V DC version for double solenoid valve

Equipment

Operate system equipment with unlubricated compressed air if possible. Festo valves and cylinders are designed so that, if used as designated, they will not require additional lubrication and will still achieve a long service life.
The quality of compressed air downstream of the compressor must correspond to that of unlubricated compressed air. If possible, do not operate all of your system equipment with lubricated compressed air. The lubricators should, where possible, always be installed directly upstream of the actuator used.

Incorrect additional oil and too high an oil content in the compressed air reduce the service life of the valve terminal.
Use Festo special oil OFSW-32 or the alternatives listed in the Festo catalogue (as specified in DIN 51524 HLP32; basic oil viscosity 32 CST at 40 °C).

Bio-oils
When using bio-oils (oils which are based on synthetic or native ester, e.g. rapeseed oil methyl ester), the maximum residual oil content of 0.1 mg/m^3 must not be exceeded (see ISO 8573-1 Class 2).

Mineral oils
When using mineral oils (e.g. HLP oils to DIN 51524, parts 1 to 3) or similar oils based on poly-alpha-olefins (PAO), the maximum residual oil content of 5 mg/m^3 must not be exceeded (see ISO 8573-1 Class 4).
A higher residual oil content irrespective of the compressor oil cannot be permitted, as the basic lubricant would be flushed out over time.

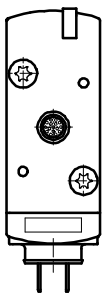
Single solenoid



Double solenoid

1	Housing	Reinforced polyamide
2	Piston spool	Wrought aluminium alloy
–	Seals	Nitrile rubber, hydrogenated nitrile rubber, fluoro elastomer

Materials	
Manifold rail with multi-pin plug	Wrought aluminium alloy
Pressure zone supply module	Reinforced polyamide
Blanking plate for vacant position	Reinforced polyamide

Product weight	
Approx. weight [g]	
Manifold rail with multi-pin plug	
• 4 valve positions	700
• 6 valve positions	925
• 8 valve positions	1160
• 10 valve positions	1390
Pressure zone supply module	30
Valves	
• Single solenoid (code K, N, M)	150
• Double solenoid (code J)	220
Blanking plate for vacant position	25

Dimensions – 3/2-way and 4/2-way valve, single solenoid Download CAD data ➔ **www.festo.com**

For electrical multi-pin plug

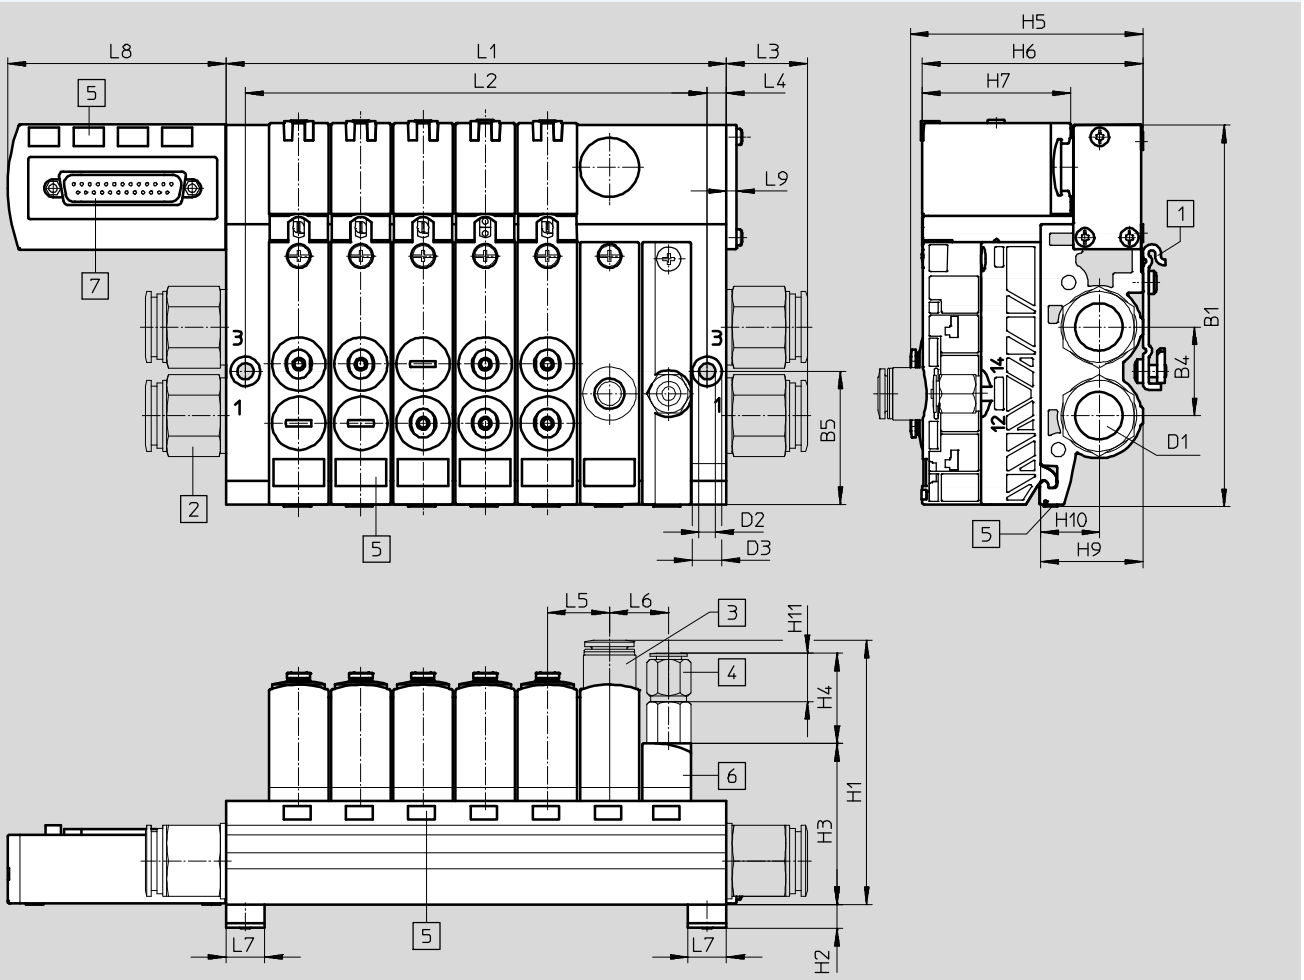
With electrical multi-pin plug



1 Attachment VAME-B6-T (optional) for mounting rail
2 Push-in fittings (optional)
3 Push-in fittings (optional, only with pressure zone supply module; blanking plate only with blanking plug)
4 Push-in fitting for external pilot air supply, with adapter for NPT
5 Inscription label (optional)
6 Selector plate for internal/ external pilot air
7 Sub-D plug

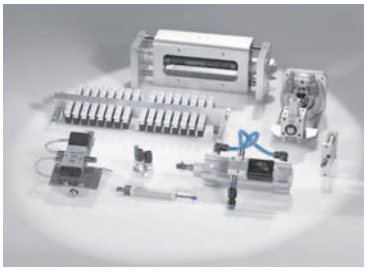
Product Range and Company Overview

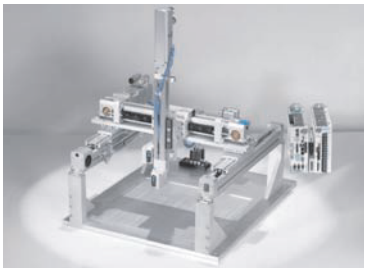
A Complete Suite and Company Overview

Our experienced engineers provide complete support at every stage of your development process, including: conceptualization, analysis, engineering, design, assembly, documentation, validation, and production.



Custom Automation Components
Complete custom engineered solutions

Custom Control Cabinets
Comprehensive engineering support and on-site services



Complete Systems
Shipment, stocking and storage services

The Broadest Range of Automation Components

With a comprehensive line of more than 30,000 automation components, Festo is capable of solving the most complex automation requirements.

Electromechanical
Electromechanical actuators, motors, controllers & drivers

Pneumatics
Pneumatic linear and rotary actuators, valves, and air supply

PLCs and I/O Devices
PLC's, operator interfaces, sensors and I/O devices

Supporting Advanced Automation... As No One Else Can!
Festo is a leading global manufacturer of pneumatic and electromechanical systems, components and controls for industrial automation, with more than 16,000 employees in 60 national headquarters serving more than 180 countries. For more than 80 years, Festo has continuously elevated the state of manufacturing with innovations and optimized motion control solutions that deliver higher performing, more profitable automated manufacturing and processing equipment. Our dedication to the advancement of automation extends beyond technology to the education and development of current and future automation and robotics designers with simulation tools, teaching programs, and on-site services.

Quality Assurance, ISO 9001 and ISO 14001 Certifications
Festo Corporation is committed to supply all Festo products and services that will meet or exceed our customers' requirements in product quality, delivery, customer service and satisfaction.

To meet this commitment, we strive to ensure a consistent, integrated, and systematic approach to management that will meet or exceed the requirements of the ISO 9001 standard for Quality Management and the ISO 14001 standard for Environmental Management.

9001:CERTCS-16248-2006-AQ-ESN-TGA
