# Angle grippers HGWM, micro Key features

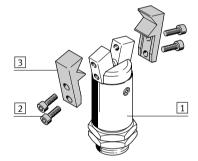

#### At a glance

- Compact, handy design
- With open or closed gripper jaws
- Versatility thanks to externally adaptable gripper fingers
- Wide range of options for attaching drive units
- With stroke compensation after installation
- Mounting options:
  - Clamping spigot
- Male thread
- Note Sizing software Gripper selection →www.festo.com

#### Mounting options for external gripper fingers (customer-specific)

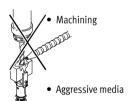

- 1 Angle gripper
- 2 External gripper fingers
- 3 Mounting screws

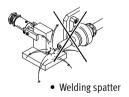

Note

Grippers are not suitable for the following, or for similar applications:

#### Characteristic load values at the gripper jaws

The indicated permissible forces and torques apply to a single gripper jaw. Static forces and torques relate to additional applied loads caused by

the workpiece or external gripper fingers, as well as forces which occur during handling. The zero co-ordinate

line (gripper jaws point of rotation) must be taken into consideration for the calculation of torques.

#### Mass moment of inertia [kgm²x10-4]

Mass moment of inertia [kgm<sup>2</sup>x10<sup>-4</sup>] for angle grippers in relation to the central axis without external gripper fingers.

Size	8	12
With stroke compensation	0.00705	0.0421
With male thread	0.00315	0.0267
With clamping spigot	0.00252	0.02154

#### Opening and closing times [ms] at 6 bar

Without external gripper fingers

The indicated opening and closing times [ms] have been measured at room temperature and 6 bar operating pressure with vertically mounted

gripper and without external gripper fingers. Load is increased if external gripper fingers are attached. This means that kinetic energy is also

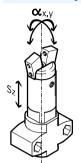

increased, as this is determined by gripper finger mass moment of inertia and angular velocity.

Size		8	12
HGWMEO	Opening	2.7	3.7
	Closing	1.2	1.8
HGWMEZ	Opening	1	1.7
	Closing	2.5	2.8

#### Gripper jaw backlash

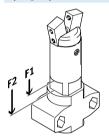

Without external gripper fingers

With angle grippers, backlash occurs between the gripper jaws and the guide element due to the plain-bearing guide. The backlash values listed in the table have been calculated based upon the traditional accumulative tolerance method and usually do not occur with mounted grippers.

Size		8	12	
Gripper jaw backlash s <sub>z</sub>	[mm]	< 0.03		
Gripper jaw angular backlash a <sub>x</sub> , a <sub>y</sub>	[°]	< 0.5		

#### Spring displacement forces [N]

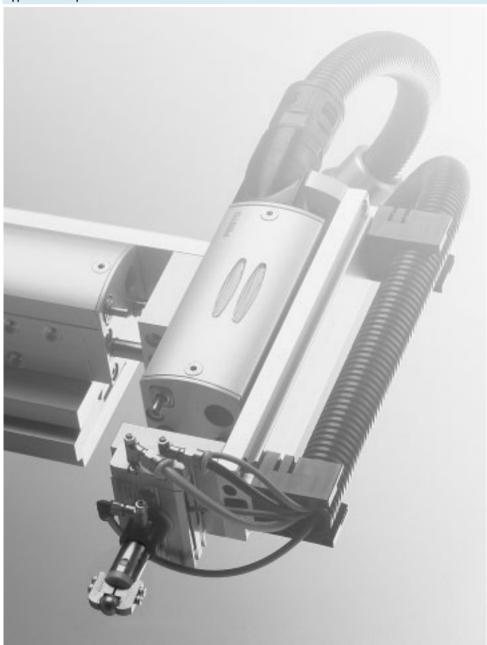

Theoretical actuating force due to stroke compensation for design variant with stroke compensation.

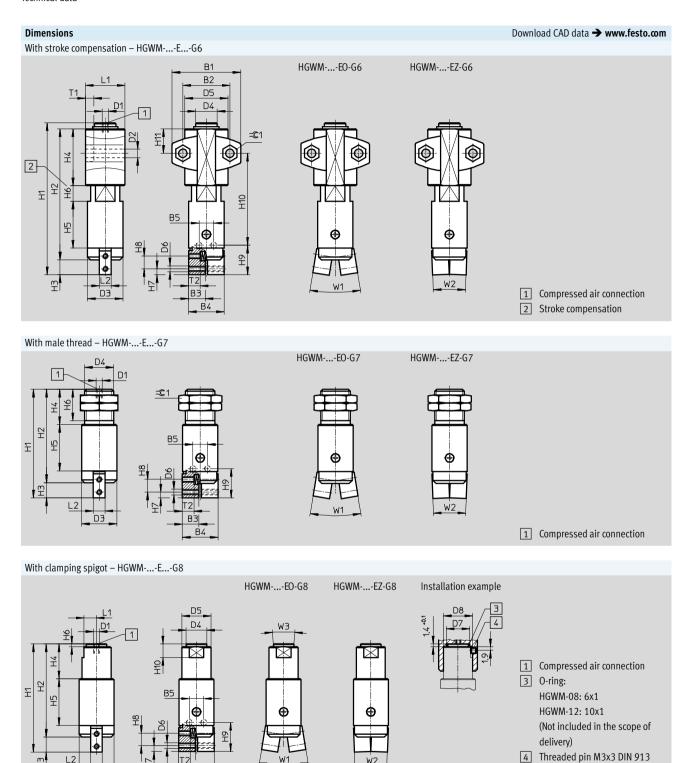

Size	8	12
Spring displacement forces F <sub>1</sub>	4	10
Spring displacement forces F <sub>2</sub>	6	23
