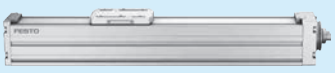
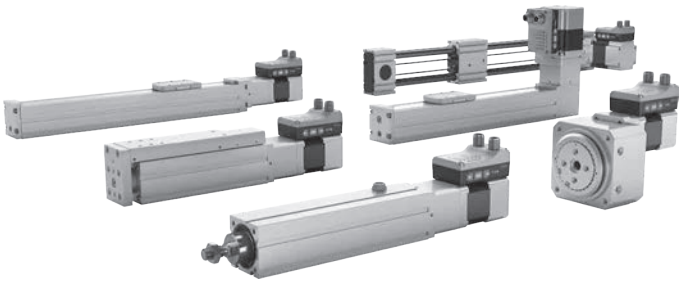
Spindle axis units ELGS-BS-KF

This product is also available as a modular mechanical system
Spindle axis ELGC-BS-KF



Key features

At a glance
Plug and work with the Simplified Motion Series



The simplicity of pneumatics is now combined for the first time with the advantages of electric automation thanks to the Simplified Motion Series. These integrated drives are the perfect solution for all users who are looking for an electric alternative for very simple movement and positioning tasks between two mechanical end positions, but don't want the commissioning process for traditional electric drive systems that can often be quite complex.

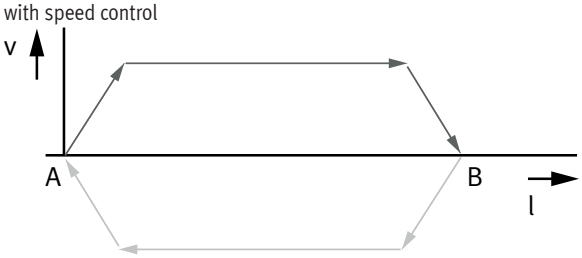
IO-Link

There is no need for any software since operation is simply based on the "plug and work" principle. Digital I/O (DIO) and IO-Link are always automatically included – a product with two types of control as standard.

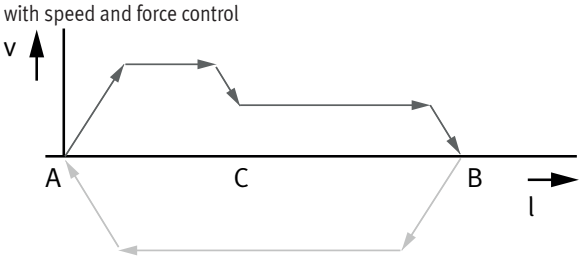
Integrated	Simple	Standardised	Connected
The integrated electronics in the drive are at the core of the Simplified Motion Series.	For commissioning, simply set all relevant parameters directly on the drive: • Speed and force • Reference end position and cushioning • Manual operation	Electrical connection via M12 plug design • Power (4-pin): power supply for the motor • Logic (8-pin): control signal, sensor signal and power for the integrated electronics	Use of extended functions via IO-Link: • Motion parameters can be set remotely • Copy and backup function for transferring parameters • Read function for extended process parameters

The functions of the Simplified Motion Series

Basic profile for movement between two end positions:
with speed control



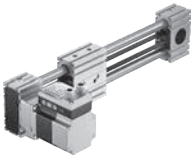
Extended motion profile for simplified press-fitting and clamping functions:
with speed and force control



- These drives are designed for simple movements between two end positions.
- Proximity switches are required in order to implement any intermediate positions.

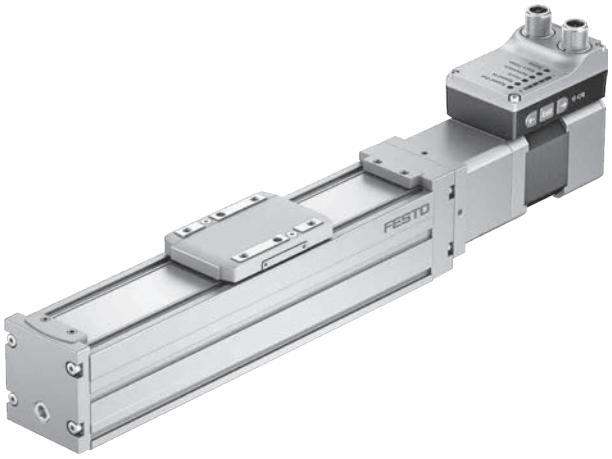
The products in the Simplified Motion Series

Spindle axis unit ELGS-BS-KF	Mini slide unit EGSS-BS-KF	Electric cylinder unit EPCS
		Toothed belt axis unit **ELGS-TB-KF**	**Toothed belt axis unit** **ELGE**	**Rotary drive unit** **ERMS**
		



Key features

At a glance



- Without external servo drive: all the necessary electronic components are combined in the integrated drive
- Two control options integrated as standard: digital I/O and IO-Link
- Complete solution for simple movements between two mechanical end positions
- Protected against external influences by internal guide
- Simplified commissioning: all parameters can be manually set directly on the drive
- No special expertise required for commissioning
- End position feedback similar to that of a conventional proximity switch is integrated as standard
- Clean Look design: easy to clean and less prone to contamination

Modular and flexible with motor, motor mounting kit and servo drive

This product is also available as a modular mechanical system as spindle axis ELGC-BS-KF:

When to compact dimensions and optimised installation space are important, e.g. in assembly systems, test and inspection systems, small parts handling, the electronics industry and desktop applications. Either as an individual axis or as a handling system.

- Compact: optimum ratio of installation space to working space
- Unique: "one-size-down" mounting system
- Modular: individual combinations with motor, motor mounting kit and servo drive
- Flexible: wide range of mounting options for optimum machine integration

Typical handling systems

For applications where compact dimensions are essential, the axes ELGC can be combined into very space-saving handling systems that are suitable for assembly systems, test and inspection systems, small parts handling, the electronics industry and desktop applications. The very compact linear axes ELGC, mini slide EGSC and electric cylinder EPCC offer an optimal ratio between installation space and working space. They feature a common system approach and platform architecture and the connections are largely adapterless.

Data sheet

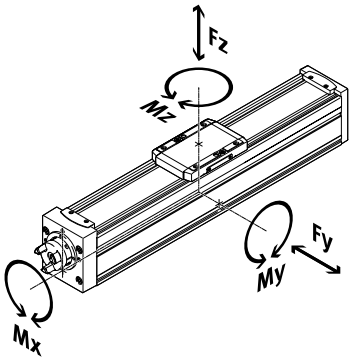
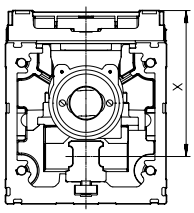
Characteristic load values

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect. These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.



Distance from the slide surface to the centre of the guide



Max. permissible forces and torques on the slide (strength limits)

Size		32	45	60
$Fy_{max.}$	[N]	150	300	600
$Fz_{max.}$	[N]	300	600	1800
$Mx_{max.}$	[Nm]	1.3	5.5	29.1
$My_{max.}$	[Nm]	1.1	4.7	31.8
$Mz_{max.}$	[Nm]	1.1	4.7	31.8

Distance from the slide surface to the centre of the guide

Size		32	45	60
Dimension x	[mm]	31.4	42.8	54.6

Max. permissible forces and torques for the bearing calculation, for a service life of 5000 km or 5 x 10^6 cycles

Size		32	45	60
$Fy_{max.}$	[N]	356	880	3641
$Fz_{max.}$	[N]	356	880	3641
$Mx_{max.}$	[Nm]	1.3	5.5	29.1
$My_{max.}$	[Nm]	1.1	4.7	31.8
$Mz_{max.}$	[Nm]	1.1	4.7	31.8

Note

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of fv ≤ 1, based on the maximum permissible forces and torques for a service life of 5000 km.
This formula can be used to calculate a guide value.
The engineering software "PositioningDrives" is available for more precise calculations ➔ www.festo.com

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

F_1/M_1 = dynamic value
F_2/M_2 = maximum value

Data sheet

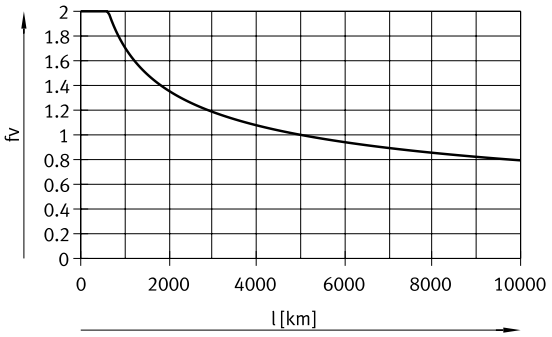
Calculating the service life

The service life of the guide depends on the load. To be able to make a statement as to the service life of the guide, the graph below plots the load comparison factor fv against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor fv greater than 1.

Load comparison factor fv as a function of service life l

Example:
A user wants to move an x kg load. Using the formula (➔ page 12) gives a value of 1.5 for the load comparison factor fv. According to the graph, the guide has a service life of approx. 1500 km. Reducing the acceleration reduces the My and Mz values. A load comparison factor fv of 1 now gives a service life of 5000 km.



Comparison of the characteristic load values for 5000 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km according to ISO or 50 km according to JIS.
As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes ELGS with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.
These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Size		32	45	60
$Fy_{max.}$	[N]	1310	3240	13400
$Fz_{max.}$	[N]	1310	3240	13400
$Mx_{max.}$	[Nm]	5	20	107
$My_{max.}$	[Nm]	4	17	117
$Mz_{max.}$	[Nm]	4	17	117

Service life of the motor

The service life of the motor at nominal power is 20000 h.

Data sheet

Sizing example

Application data:

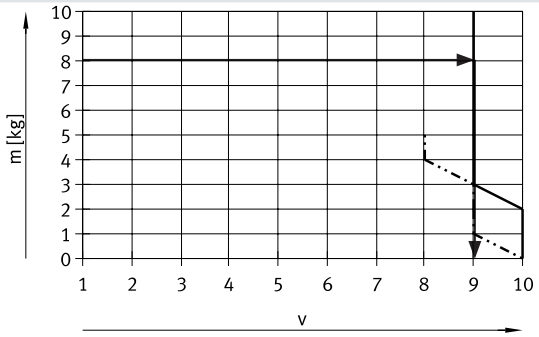
- Payload: 8 kg
- Mounting position: horizontal
- Stroke: 400 mm
- Max. permitted positioning time: 4 s (one direction)

Step 1: Selection of the possible size from the table ➔ page 8

Mechanical data				
Size		32	45	60
Max. payload				
Horizontal	[kg]	2	10	20
Vertical	[kg]	2	5	13

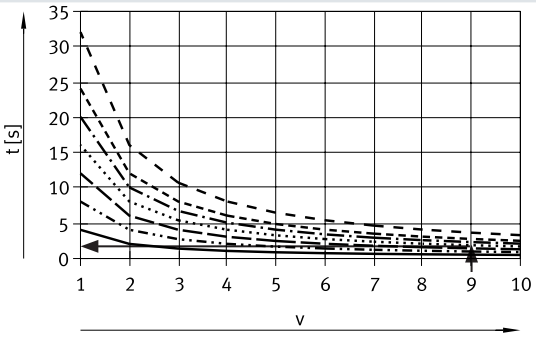
➔ Smallest possible size: ELGS-BS-KF-45

Step 2: Selection of max. speed level v for payload m



➔ Max. speed level for payload: level 9

Step 3: Reading off the min. positioning time t for stroke l



➔ Min. positioning time for 400 mm at level 9: 2 s

Result

The application can be implemented using ELGS-BS-KF-45-400. A minimum positioning time (one direction) of 2 s is achieved. Longer positioning times can be selected at any time using a lower speed level.

Iz	[mm^4]	45x10^3	170x10^3	542x10^3

Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functional performance of the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dynamic deflection (moving load)	Static deflection (stationary load)
32 ... 60	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

Accessories

Profile mounting EAHF-L2-...-P-S
Material:
Anodised wrought aluminium alloy
RoHS-compliant

- For mounting the axis on the side of the profile

Accessories

Profile mounting EAHF-L2-...-P
Material:
Anodised wrought aluminium alloy
RoHS-compliant

- For mounting the axis on the side of the profile.
  The profile mounting can be attached to the mounting surface using the drill hole in the centre.
