## Key features

### Which fitting fits which thread?

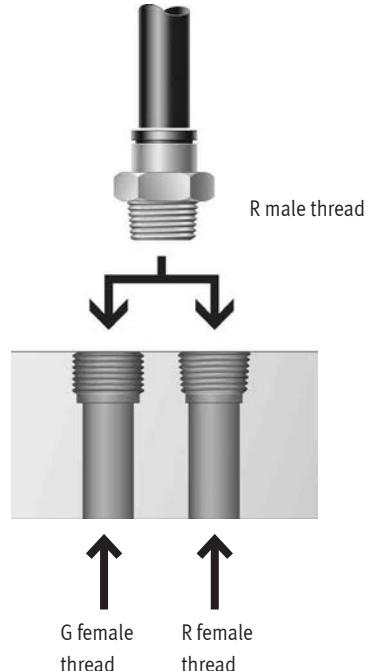

#### Metric thread

- Threads are comparable with G threads and are fitted as cylindrical metric thread
- Sealing is guaranteed via an O-ring.

#### R thread based on JIS B0203 and compatible with pressure-tight media to EN 10226.

- Self-sealing thread
- Sealing via coated threads
- No additional sealing surface required
- Smaller installation dimensions since there is no need for an offset for the sealing surface
- Can be reused up to 3 times.

#### Note

All R threads are coated with a sealing material. This coating replaces the conventional sealing ring. Simply screw in the R thread by hand and tighten 1 or 2 revolutions with an open-end spanner. The fitting can be screwed in again up to three times.

When screwing in R-threads several times, you must make sure that the abraded particles from the sealing material coating cannot enter the compressed air system.

### Tube assembly/disassembly

#### Mounting

The prerequisite for ensuring that the inside seal is securely held and protected against damage is that the tube is cut into straight lengths and deburred.

- 1) Insert tubing as far as the stop.  
It is important to ensure that the tubing is inserted into the inside seal. Depending on the tolerance between the tubing and the seal, the contact of the tubing with the seal may be wrongly interpreted as the stop.
- 2) Check that the tubing connection is secure by pulling gently on the tube.

#### Disassembly

- 1) The tubing can be detached easily by pressing and holding down the releasing ring. Remove the tubing carefully from the fitting.
- 2) Before re-using the tubing, remove the damaged part by cutting it off.
