Soft-start/quick exhaust valves MS-SV, MS series

FESTO

MS series service unit components

Solutions for every application

With its large product range, highly effective components and a wide choice of functions, the MS series from Festo offers a complete concept for compressed air preparation. It is suitable for simple standard applications as well as application-specific solutions with very high quality requirements. Available as individual components, pre-assembled combinations ex-stock,

application-specific combinations or complete turnkey solutions. The five sizes in the MS series achieve maximum flow rates with low space requirements.

Freely combinable function modules

Pressure regulators, on/off and softstart valves with safety function, filters, pressure and flow sensors, dryers, sensors and lubricators can be assembled into a suitable solution for every task. With the modular structure the components can be combined as required. The simple connection system saves time because replacing individual modules does not require disassembling the entire combination. Many of the components are also UL and ATEX certified.

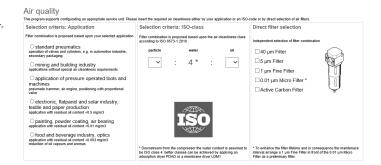

CAD models and configurator

Convenient tools for planning and selecting application-specific individual components and combinations. The product configurator can be used to configure customised solutions quickly and to transfer the order data without any hassle.

Engineering tools

Selection tool for choosing the right service unit combination without oversizing, and with the right air quality class:

Integrated sensors

Pressure and flow sensors

Safety functions

Soft-start/quick exhaust valves MS6-SV/MS9-SV

Energy savings

Service unit combinations MSE6

Intelligent mix of sizes

- Maximum machine availability thanks to controlled processes
- Reliable compressed air preparation and supply for systems
- Integrated or stand-alone
- Easy to connect with M8/M12 plug

- Fast and reliable exhausting of systems up to Performance Level e, certified to EN ISO 13849-1
- · Integrated soft-start function

- Fully automatic monitoring and regulation of compressed air supply
- Automatic shut-off of the compressed air in stand-by mode
- Detection and notification of leakages
- Condition monitoring of relevant process data

- Optimum flow rate with size reduction of 18%
- Excellent energy efficiency
- Cost-optimised combinations save up to 30%!

Size differences						
Size		MS2	MS4	MS6	MS9	MS12
Grid dimension	[mm]	25	40	62	90	124
Connection sizes		M5, QS-6	G1/8, G1/4, G3/8	G1/4, G3/8, G1/2, G3/4	G1/2, G3/4, G1, G1 1/4, G1 1/2	G1, G1 1/4, G1 1/2, G2
Standard nominal flow rate qnN¹¹)	[l/min]	350	1800	6500	20000	22000

¹⁾ Using pressure regulator MS-LR as an example

Note

Information

The next few pages provide a brief overview of the product range for the MS series service unit components.

You can find detailed information and all technical data in the documentation for the corresponding service unit component.

Accessories such as connecting plates or mounting brackets can be ordered either via the configurator or separately.

Design of a service unit combination

The order of the individual service unit components within a combination is relevant for safety and functionality. The service unit components cannot be combined in any order in the flow direction. There are restrictions and rules.

The configurator for the service unit combination MSB is a reliable and convenient way of arranging individual service unit components and it ensures compliance with the applicable rules. As a result, you get a fully assembled combination, including UL or ATEX certification, if necessary. When arranging a combination of individually configured and ordered service unit components, the points on the right must be complied with under all circumstances.

- Regulators MS-LFR/LR/LRP/LRE are only permissible in the flow direction with the same or decreasing pressure regulation range
- Filters MS-LFR/LF/LFM/LFX are only permissible in the flow direction with an increasing grade of filtration
- Lubricators MS-LOE are not permitted in the flow direction upstream of a filter MS-LFR/LFM/LF/LFX, water separator MS-LWS or membrane air dryer MS-LDM1
- A micro filter MS-LFM must be installed in the flow direction upstream of an activated carbon filter MS-LFX or membrane air dryer MS-LDM1
- A flow sensor SFAM cannot be installed directly downstream of a regulator MS-LFR/LR; a branching module MS-FRM must be positioned between them
- A soft-start/quick exhaust valve MS-SV must be the last service unit component in the flow direction

MS6-SV-...-10V24, 10V24F, 10V24P

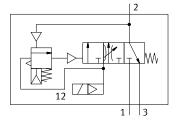

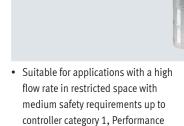

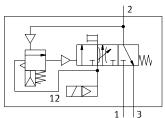

Electropneumatic soft-start/quick exhaust valve for gradual pressurisation and quick exhaust of system components (single channel).

The main restrictor in the cover permits a slow build-up of the output pressure p2. Once the output pressure p2 has reached the set pressure switchover point (switching pressure), the valve opens and the full operating pressure p1 is available at the output

- High volumetric flow rate for pressurisation and exhaust
- The filling flow rate can be set for gradual pressure build-up with a restrictor
- Adjustable pressure switchover point
- Optional pressure sensor
- Optional covering for the control sections as tamper protection

MS6-SV-...-10V24E

Safety characteristics	
Conforms to standard	EN ISO 13849-1
Safety function	Exhaust
	Avoidance of unexpected start-up (pressurisation)
Performance Level (PL)	Exhausting: up to category 1, PL c
	Prevention of unexpected start-up (pressurisation): up to category 1, PL c
Note on forced checking procedure	Switching frequency min. once a month
CE mark (see declaration of conformity) ¹⁾	To EU Machinery Directive
Shock resistance	Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27
Vibration resistance	Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6

 $1) \quad \text{Additional information: www.festo.com/catalogue/...} \rightarrow \text{Support/Downloads}.$

Note

The mechanical system is not tested in the controlled (i.e. pressurised) state.

Forced switch on/off: switching frequency should be at least 1/month

If the process-related switching frequency (safe exhausting) is less than once a month,

the machine's operator must carry out a forced switch off.

Pneumatic connection 1, 2	
Female thread	G1/2
Connecting plate AG	<u>'</u>
Connecting plate AQ	
Pneumatic connection 3	G3/4
Actuation type	Electrical
Design	Piston spool
Type of mounting	With accessories
	In-line installation
Mounting position	Any
Pressure indicator	Via pressure sensor for displaying the output pressure on LCD display and electrical output
	Via pressure sensor for displaying the output pressure by switching status indicator and electrical output
	Via pressure gauge for displaying the output pressure
	Via pressure gauge with red/green scale for displaying the output pressure
	Prepared for G1/4
Valve function	3/2-way valve, closed, single solenoid
	Soft-start function, adjustable
Non-overlapping	Yes
Exhaust function	Cannot be throttled
Manual override 10V24, 10V24F	At the pilot solenoid valve: non-detenting
	At the soft-start/quick exhaust valve: detenting, self-resetting
10V24E	At the pilot solenoid valve: none
	At the soft-start/quick exhaust valve: detenting, self-resetting
10V24P	At the pilot solenoid valve: non-detenting/detenting
	At the soft-start/quick exhaust valve: detenting, self-resetting
10V24C, 10V24D	None
Reset method	Mechanical spring
Type of control	Piloted
Pilot air supply	Internal
Sealing principle	Soft

Characteristic flow rate values	
Pneumatic connection	Female thread G1/2
Standard nominal flow rate qnN ¹⁾ [l/min]	
in main flow direction $1 \rightarrow 2$	5700
Standard flow rate qN [l/min], p2 = 6 bar	
in exhaust direction 2 → 3	7600 ²⁾
C value [l/s*min]	
in main flow direction 1 → 2	23.2
b value

¹⁾ Module connector MS6-MV [2] or mounting bracket MS6-WP/WPB/WPE/WPM [3] is required for mounting.

Function

Operating pressure 3.5 ... 10 bar

www.festo.com

The electropneumatic soft-start/quick exhaust valve is used to reduce pressure quickly and safely and to build up pressure gradually in industrial pneumatic piping systems and terminal equipment.

The MS6-SV-D has two safety functions:

- · Safe exhausting
- Protection against unexpected startup

The MS6-SV-D has a 2-channel design, i.e. it has two internal 2-way valves which can be controlled separately by pilot valves (V1 and V2) on the cover.

The directional control valves are actuated when both coils are energised simultaneously; this moves the MS6-SV-D from the normal position into the switching position. The output pressure p2 rises slowly according to the restrictor setting. The main seat opens when the switch-through pressure is reached. The normal position is achieved by switching off both coils. Two proximity switches (S1 and S2) attached to the housing monitor the directional control valves. A further proximity switch (S3) can optionally be added to monitor the soft-start valve.

- · Conforms to standard IEC 61508
- Switching time delay can be adjusted using a restrictor for gradual pressure build-up; main seat opens at approx. 50% of the operating pressure
- · Optional pressure sensor

The MS6-SV-D can achieve various categories and safety levels to EN ISO 13849-1 depending on whether the directional control valves are monitored.

When it is integrated appropriately in the control chain and the signals for initial position sensing are correctly linked with the control signals (plausibility checking)

 S1 and S2 Performance Level d/Category 3 to EN ISO 13849-1 and EN ISO 13849-2 • S1, S2 und S3 Performance Level e/Category 4 to EN ISO 13849-1 and EN ISO 13849-2 are reached.

Note

To avoid back pressures, it is recommended that the device is operated with the silencer UOS-1. The silencer can be ordered via the modular product system (SO \rightarrow Page 20) or as an accessory (UOS-1 \rightarrow Page 20).

Note

Only devices that do not impair the pneumatic protective measure – safe exhausting – may be placed downstream of the MS6-SV-...-D.

The MS6-SV-...-D is not approved for use as a press safety valve.

Function

Flow rate 4300 l/min

Temperature range −10 ... +50°C

Operating pressure 3.5 ... 10 bar

www.festo.com

safety-related pneumatic protection

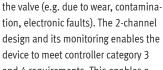

objective of safe exhausting is also

guaranteed in the event of faults inside

The electropneumatic soft-start/quick exhaust valve is used to reduce pressure quickly and safely and to build up pressure gradually in industrial pneumatic piping systems and terminal equipment.

The device is a self-testing, redundant mechatronic system conforming to the requirements of EN ISO 13849-1. The

- Performance Level "e"/Category 4 to EN ISO 13849-1
- Conforms to standard IEC 61508
- Switching time delay adjustable via a restrictor for gradual pressure build-up
- · Optional pressure sensor

design and its monitoring enables the device to meet controller category 3 and 4 requirements. This enables a Performance Level of max. "e".

The MS6N-SV-...-E-10V24 should only be used in combination with the multi-pin plug socket NECA for which it is approved.

The multi-pin plug socket can be ordered via the modular product system (MP... → Page 32) or as an accessory (NECA → Page 32).

The device receives the secure enable signals (EN1/EN2) via the electrical connection (multi-pin plug socket NECA Sub-D, 9-pin or AS-i connecting cable). The signals are generated by commercially available electronic or electromechanical safety switching devices which monitor the protective equipment of the machine (e.g. emergency stop, light curtain, electrical door switch of a protective enclosure, etc.).

Note

To avoid back pressures, it is recommended that the device is operated with the silencer UOS-1. The silencer can be ordered via the modular product system (SO at Page 32) or as an accessory (UOS-1 at Page 32).

Only devices that do not impair the pneumatic protective measure - safe exhausting - may be placed downstream of the MS6-SV-...-E. The MS6-SV-...-E is not approved for use as a press safety valve.

Safety characteristics	
Туре	MS6-SVE-10V24
Conforms to standard	EN ISO 13849-1
Safety function	Exhaust
	Avoidance of unexpected start-up (pressurisation)
Performance Level (PL)	Exhaust: up to category 4, PL e
	Prevention of unexpected start-up (pressurisation): up to category 4, PL e
Safety integrity level (SIL)	Exhaust: SIL 3
	Avoidance of unexpected start-up (pressurisation): SIL 3
Note on forced checking procedure	Switching frequency min. once a month
Certificate issuing authority ¹⁾	IFA 1001180
CE mark (see declaration of conformity) ¹⁾	To EU Machinery Directive
	To EU EMC Directive
Shock resistance	Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27
Vibration resistance	Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6

1) Additional information: www.festo.com/catalogue/... → Support/Downloads.

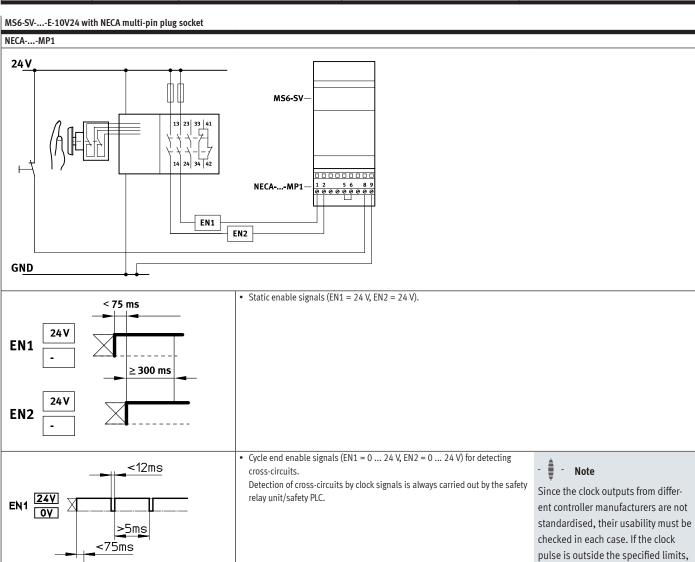

Note

The mechanical system is not tested in the controlled (i.e. pressurised) state.

Forced switch on/off: switching frequency should be at least 1/month If the process-related switching frequency (safe exhausting) is less than once a month,

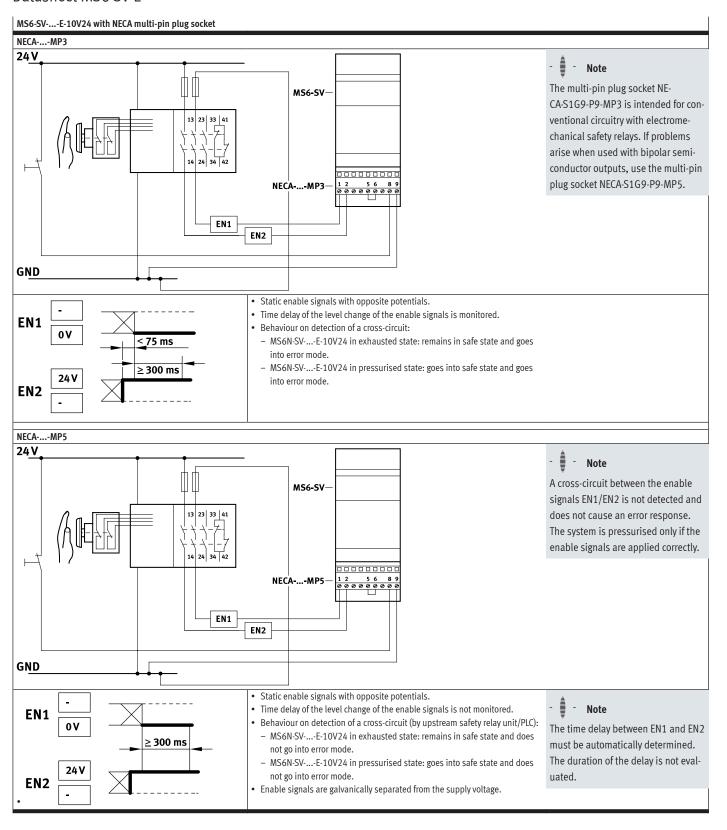

the machine's operator must carry out a forced switch off.

Enable signal status		Status of MS6-SVE-10V24 with multi-	Status of MS6-SVE-10V24 with multi-pin plug socket				
EN1	EN2	NECAMP1	NECAMP3	NECAMP5			
0 V	0 V	Unpressurised	MS6N-SVE-10V24 switches to fault mode.	MS6N-SVE-10V24 does not switch to fault mode, but remains in the safe, unpressurised state. Note: Detection of cross-circuits and error detection/ evaluation necessary via external controller.			
0 V	24 V	MS6N-SVE-10V24 switches to fault mode.	Pressurised	Pressurised			
24 V	24 V	Pressurised	MS6N-SVE-10V24 switches to fault mode.	MS6N-SVE-10V24 does not switch to fault mode, but remains in the safe, unpressurised state. Note: Detection of cross-circuits and error detection/ evaluation necessary via external controller.			
24 V	0 V	MS6N-SVE-10V24 switches to fault mode.	Unpressurised	Unpressurised			

the MS6N-SV-...-E-10V24 detects it as an error and a safe shutdown is

initiated.

Function

Electropneumatic soft-start/quick exhaust valve for gradual pressurisation and quick exhausting of system components (single channel).

Operating pressure 3.5 ... 16 bar

The main restrictor in the end cap permits a slower build-up of output pressure p2. Once the output pressure p2 has reached the set pressure switchover point (switching pressure), the valve opens and the full operating pressure p1 is available at the output.

- Suitable for applications with a high flow rate in restricted space with medium safety requirements up to controller category 1, Performance Level c
- High volumetric flow rate for pressurisation and exhaust
- The filling flow rate can be set for gradual pressure build-up with a restrictor
- Adjustable pressure switchover point
- · Optional pressure sensor
- Optional covering for the control sections as tamper protection

Safety characteristics	
Conforms to standard	EN ISO 13849-1
Safety function	Exhaust
Performance Level (PL)	Exhausting: up to category 1, PL c
Shock resistance	Shock test with severity level 1 to FN 942017-5 and EN 60068-2-27
Vibration resistance	Transport application test with severity level 1 to FN 942017-4 and EN 60068-2-6

Pneumatic connection 1, 2			
Female thread	G3/4, G1, 3/4 NPT or 1 NPT		
Connecting plate AG	G1/2, G3/4, G1, G1 1/4 or G1 1/2		
Connecting plate AQ	1/2 NPT, 3/4 NPT, 1 NPT, 1 1/4 NPT or 1 1/2 NPT		
Module without connecting thread/connecting plate G/I	IG -		
Pneumatic connection 3	G1 (1 NPT) ¹⁾		
Actuation type	Electrical		
Design	Piston spool		
Type of mounting	With accessories		
	In-line installation		
Mounting position	Any		
Pressure indicator	Via pressure sensor for displaying the output pressure by switching status indicator and electrical output		
	Via pressure gauge for displaying the output pressure		
	Via pressure gauge with red/green scale for displaying the output pressure		
	Prepared for G1/4		
Valve function	3/2-way valve, closed, single solenoid		
	Soft-start function, adjustable		
Exhaust function	Cannot be throttled		
Reset method	Mechanical spring		
Type of control	Piloted		
Sealing principle	Soft		

- 1) Only with N3/4/N1/AQ.../NG without silencer S
- Note: this product conforms to ISO 1179-1 and ISO 228-1.
