Installation system CPI
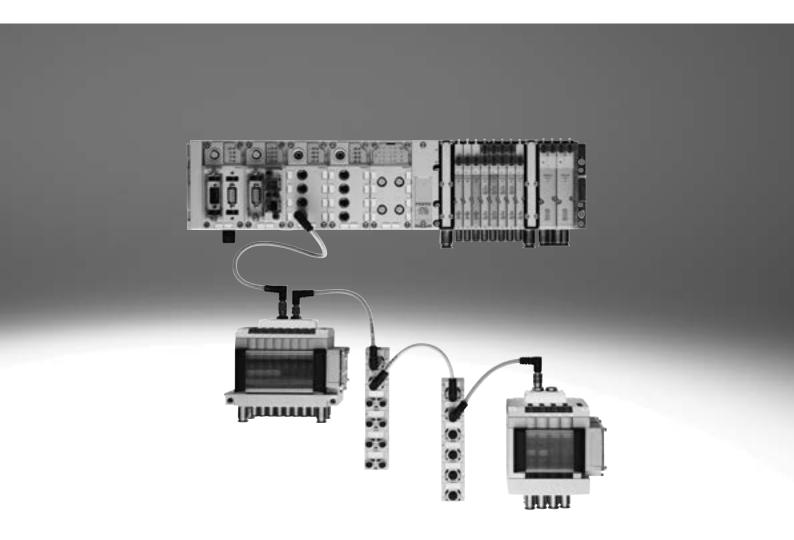

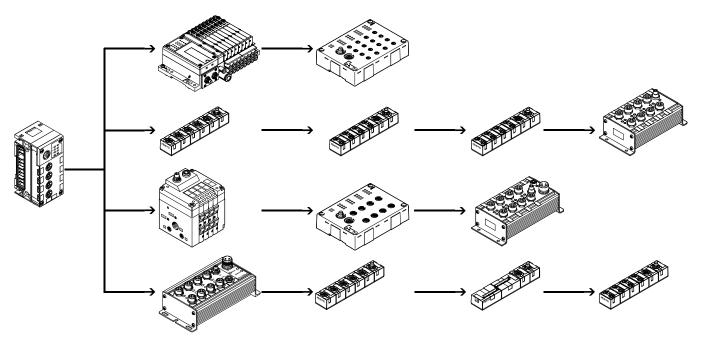

FESTO

Key features

Key features

Innovative

- Complete concept for decentralised machine and system structure; centralised and decentralised installation is possible in combination with the CPX terminal
- Decentralised pneumatic components and sensors for fast processes
- Centralised electric components for fieldbus and common power supply
- Flexible configuration of the individual CP strings
- Choice of valve terminal sizes for optimum pneumatic control loop systems
- Performance data as for the CP system with the addition of the comprehensive diagnostic capabilities of the CPX terminal

Sturdy

- Electrical accessories to IP65
- Proven valve terminals CPV (compact), MPA-S (sturdy, modular)
- Electrical input and output modules in metal housing or compact in encapsulated plastic housing
- Sturdy connection technology M12, alternatively M8
- IP20 modules for control cabinet installation with a choice of spring-loaded terminals or screw terminals

Versatile

- A number of CP interfaces can be combined under one bus node
- Four CP strings up to 10 m in length (radius) facilitate optimum decentralisation
- Max. 32 inputs and 32 outputs/valves per string
- Available valves:
  - Valve terminal CPV-SC, max. 170 l/min flow rate
  - Valve terminal MPA-S, max. 700 l/min flow rate
  - Valve terminal CPV, max. 1600 l/min flow rate
  - Valve terminals with I-Port interface (VTUG, CPV, MPA-L, VTUB-12, VTOC)
- Input modules with 8 … 32 inputs and output modules with 4 … 8 outputs, each with or without additional power supply

Operational safety

- Sturdy modules and accessories
- Ready-to-install system including CP cable (hybrid cable for data and power)
- Short circuit-proof connections with reverse polarity protection
- Valves with separate load voltage supply
- All modules equipped with local diagnostics and status LEDs
- Diagnostics of each CP string via controller/fieldbus
- Self-learning system (save button) for current configuration
- Easy replacement of modules at any time

Key features

Installation system CPI

The CPI system is capable of meeting the completely contrasting requirements created by the difference between extensive decentralised modularisation and electrical installation.

High-speed machines require short cycle times and short pneumatic tubing. The valves must be mounted close to the cylinders. The CPI system was developed to meet these requirements without having to wire each valve individually.

The system integrates the modular valve terminal MPA-S with internal communication system, valve terminals with integrated sub-base CPV that are suitable for operating small pneumatic drives, and various input/output modules in a single installation concept.
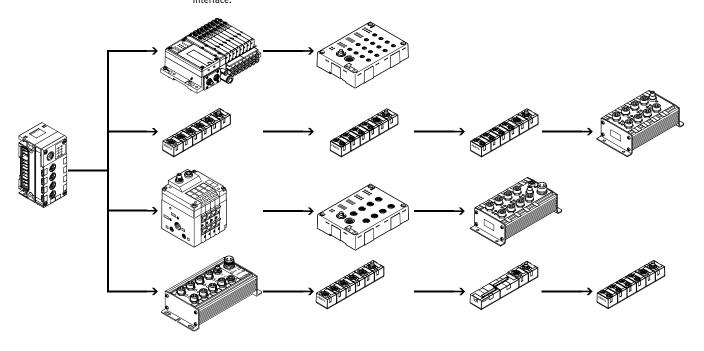

All CP valve terminals and CP modules are connected using a ready-to-install CP cable, and are attached to the CP interface. 4 modules, for example one CPV valve terminal and one to three CP input modules, make up an installation string that ends at the CP interface.

Scope of services:
- Max. 4 installation strings per CP interface
- Max. 10 metre line length per string (radius)
- Max. 4 CP modules per string
- Max. 32 inputs and max. 32 outputs per string

The number of CP modules that can be connected and the number of inputs/outputs is dependent on the type of CP module and CP interface.

The maximum configuration (4 modules per string, 32 inputs/outputs) is only possible in combination with the CPX terminal and CP modules with CPI functionality.

The CP interface is the central connection point for the valve power supply and the sensor supply. The power supply for the sensors connected to the input modules is separate from the load voltage supply of the valves.

Peripherals overview

Integration of the installation system CPI in various connection concepts
Centralised pneumatic connection (valve terminal)

Advantages
- Pneumatic multiple connector plate
- Less tubing required than with individual valves
- Common valve air supply
- Central positioning
- Material, weight and cost savings

Disadvantages
- Only effective with a large number of closely spaced actuators
- Heavier than an individual valve (lower overall weight than the same number of individual valves), which may make mounting on moving systems or in very cramped installation spaces difficult
- Longer tube lengths are occasionally required, ruling out the possibility of optimum pneumatic performance

Decentralised pneumatic connection (individual valve/valve on individual sub-base)

Advantages
- Can be positioned directly at the actuator, can even be integrated
- Short tubing length to the actuator enables short switching times
- Optimum pneumatic timing and performance possible

Disadvantages
- Air supply per valve requires more tubing
- Serial electrical links not advisable/possible
- More complex electrical installation
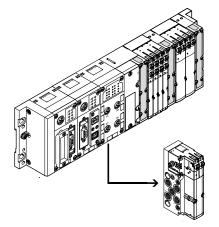

Centralised electrical connection (multi-pin/fieldbus connection/standalone mini control system)

Advantages
- Internal electrical links requires less cabling
- Increased transparency
- Material, weight and cost savings
- Ideal for connecting a large number of closely spaced valves

Disadvantages
- Not suitable for individual, more widely separated applications due to the more complex cabling
- More complex individual components (cables, fieldbus modules)

Peripherals overview

Integration of the installation system CPI in various connection concepts

Decentralised electrical connection (CPI system/individual valve/valve on individual sub-base/valve manifold assembly)

Advantages
- CPI system with reduced installation effort for groups of actuators/ sensors
- Different levels of complexity with widely separated individual components
- Easy replacement of components during servicing
- Optimum pneumatic timing and performance possible

Disadvantages
- Limited spatial expansion possible (CPI system up to 10 m, AS-Interface up to 100 m)
- High installation costs

Combined centralised and decentralised electrical connection (valve terminal with CP interface/output module)

Advantages
- Scalable to different requirements within a system
- One control interface in the system, reduces installation complexity with closely and widely spaced actuators
- Enables an optimum electrical and pneumatic control chain
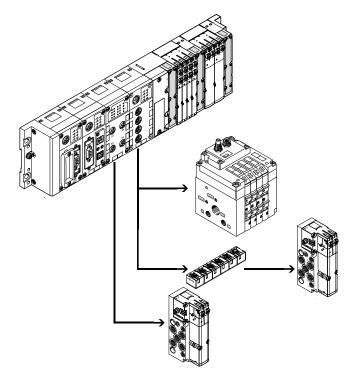

Disadvantages
- Application must at least partially meet the requirements of a centralised connection

Connecting the installation system CPI to a higher-level controller

Bus node/Industrial Ethernet

Different bus nodes are used for integration in the control systems of various manufacturers.
The CPI system can therefore be operated via more than 90% of the most commonly used bus systems.

- PROFIBUS
- INTERBUS
- DeviceNet
- CANopen
- CC-LINK
- EtherNet/IP
- PROFINET
- POWERLINK
- EtherCAT
- Sercos III

Control block

The optional Front End Controller CPX-CEC permits simultaneous access via Ethernet and an integrated web server, as well as autonomous pre-processing.
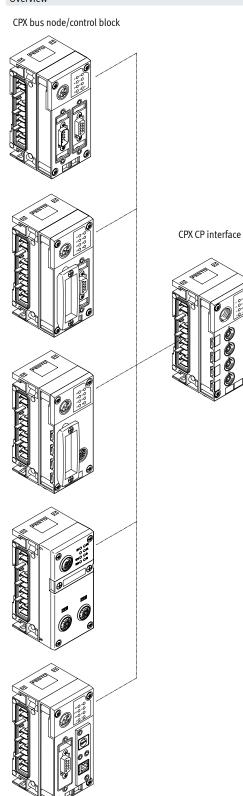

- Ethernet
- TCP/IP
- Web

→ Internet: cpx

Peripherals overview

Connecting modules in the installation system CPI
CP interface within the context of the CPX terminal

Using the CP interface as a module of the CPX terminal makes it easier to progress from the CP system to the CPI system.
All CP modules are both downwards and upwards compatible and can therefore be used in the CP system and in the CPI system.
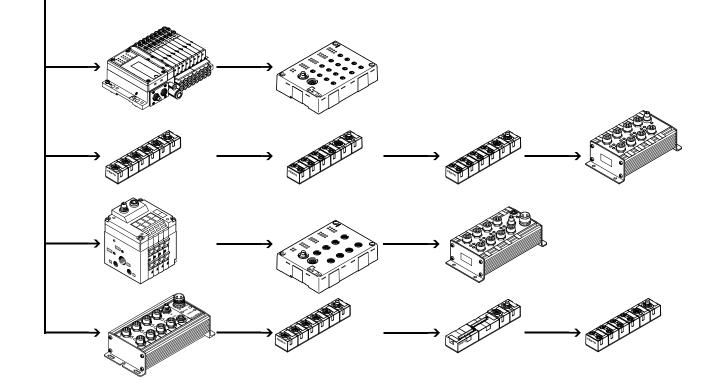

This extension has doubled the scalability and range of CP modules that can be used:
- 4 CP strings
- Up to 4 modules per string
- Up to 32 inputs and outputs per CP string

An added advantage of the CPI system is its extremely user-friendly access options via the CPX bus node and the CPX-CEC:

- Data preprocessing
- Diagnostics via software
- Reading out of status information
- Display via permanently installed or mobile unit
- Remote maintenance with CPX-CEC and Ethernet connection

Connection options

Fieldbus Direct

Special feature	Application	Characteristics of Fieldbus Direct	
The Fieldbus Direct product range is the most compact way of connecting valves to a fieldbus. The bus node is directly integrated in the electrical actuation of the valve terminal and therefore takes up only a minimal amount of space.	Fieldbus Direct is a system for the compact connection of a valve terminal to different bus standards. The CP string extension option enables the functions and components of the CPI installation system to be used.	• Extremely compact and space-saving design • Low-cost solution for connecting a small number of valves to the fieldbus • Direct front-end integration with a high degree of protection IP65 • Comprehensive diagnostics and condition monitoring	**Note** Detailed description of the range of functions and combination options of CPV valves → Internet: cpv (valve terminal CPV)
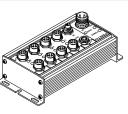

Fieldbus Direct and CP string extension

The optional string extension allows a further valve terminal and I/O modules to be connected to the Fieldbus Direct bus node: • A CP string of the CP system is integrated in the bus node as an extension. • Various input and output modules as well as valve terminals can be connected.	The maximum length of the CP string extension is 10 metres, which means that the extension modules can be mounted directly on site. All of the required electrical signals including load current supply are transmitted via the CP cable, which in turn means that no further installation is needed on the extension module.	The CP string interface offers: • Max. 32 input signals • Max. 32 output signals for output modules 24 V DC or solenoid coils • Logic and sensor supply for the input modules	• Load voltage supply for the valve terminal • Logic supply for the output module

Connection options

Fieldbus Direct with CP string extension
CPV valve terminal
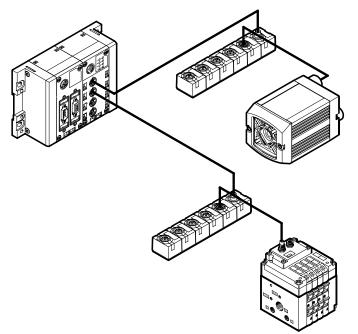

- 4 to 8 valve positions
- DeviceNet

- 4 to 16 solenoid coils

Compact vision system SBOC-Q/SBOI-Q with CP interface

The compact vision system SBOx-Q can be integrated into a Festo CPI network. In this case it functions like a binary module with 16 inputs and 16 outputs.

- Address requirement: 16 digital inputs/outputs
- CPI connection

More information
→ Internet: sboc-q, sboi-q

Connection options

Connecting inputs and outputs in the installation system CPI
CP connecting cable

	KVI-CP-3-... - ▮ - **Note** The total length of all CP cables in a CP string must not exceed 10 m.	• Pre-assembled cables for connecting the CP modules • Lengths from 0.25 to 8 metres • M9 plug/socket, 5-pin • Straight/angled version in any combination	More information ➔ Internet: kvi-cp

CP input/output modules in sturdy, universal and compact design or as valve terminal

Input and output modules with different electrical interfaces are available for connecting sensors and actuators:	• M12-5POL • M8-3POL • M8-4POL • Spring-loaded terminal or screw terminal technology	The maximum number of inputs/outputs that can be connected to the individual modules can vary depending on the application. The following module sizes are available:	• Input modules with 8, 16 or 32 channels • Output modules with 4 or 8 channels • CPV with 4, 6 or 8 valve slices (max. 16 valves) • MPA-S with 2 ... 32 valves

Valve terminals with CP interface
CPV valve terminal

Key features – Input/output modules

Connecting inputs and outputs in the installation system CPI			
Special features of the CP I/O modules in sturdy design			
The sturdy CP I/O modules have a highly resistant aluminium housing and their internal electronic components can be repaired or replaced.	CP-E...Z or output modules have a separate load voltage supply, which means less load on the CP interface and CP cable and more power for the connected consuming devices.	This also makes it easier to disconnect the consuming devices separately.	High degree of protection IP65, surpassed only by the compact CP modules with IP65/67 protection. The only exception is the IP20 protection offered by the module with clamped terminal connection for installation in control cabinets.

CP input modules in sturdy design

	CP-E16-M12x2-5POL	• 16 inputs 24 V DC • Signal status indication via 16 LEDs • Operating status indication • CP functionality	• M12 plug, double allocation • 1x M9 CP connection • PNP/NPN, IP65
	CP-E16-M8	• 16 inputs 24 V DC • Signal status indication via 16 LEDs • Operating status indication • CP functionality	• M8 plug, single allocation • 1x M9 CP connection • PNP/NPN, IP65
	CP-E16-M8-Z	• 16 inputs 24 V DC • Signal status indication via 16 LEDs • Operating status indication • CP functionality	• Galvanic isolation through additional power supply • M8 plug, single allocation • 1x M9 CP connection • Separate sensor supply • PNP/NPN, IP65

CP output modules in a sturdy design

	CP-A08-M12-5POL	• 8 outputs 24 V DC • Output signal display via 8 LEDs • Operating status indication • M12 plug, single allocation • CP functionality	• 2x M9 CP connection • Separate load voltage • Outputs resistant to overloads and short circuits • PNP, IP65

Key features – Input/output modules

Connecting inputs and outputs in the installation system CPI
Special features of the CP I/O modules in economical design

In addition to the sturdy CP I/O modules and the compact CP I/O modules, there are also the economical modules with the design features of the compact modules, but with a greater number of inputs/outputs.

The economical CP modules feature a compact design, coupled with a large number of inputs/outputs.
The modules can be used in combination with the following valve terminals:
- CPV, MPA-S, CPV-SC

Application:
- Same function, configuration and commissioning as sturdy or compact CP modules
- Integrated H-rail mounting and earthing plate
- Centrally placed status and diagnostic LEDs
- The economical CP modules and the other CP modules can be operated together on a string

- The maximum number of modules per CP string is as follows:
  - CPI system: max. 4 modules or max. 32 inputs and 32 outputs
  - CP system: one valve terminal/output module and one input module

CP input modules in economical design

	CP-E16-M12-EL	• 16 inputs 24 V DC • Signal status indication via 16 LEDs • Operating status indication (per module and per group of 4 inputs) • CPI functionality	• 8x M12 plug, 5-pin, double allocation • 2x M9 CP connection • PNP, IP65
	CP-E16-M8-EL	• 16 inputs 24 V DC • Signal status indication via 16 LEDs • Operating status indication (per module and per group of 4 inputs) • CPI functionality	• 16x M8 plug, 3-pin, single allocation • 2x M9 CP connection • PNP, IP65

CP output modules in economical design

|			
	CP-A08-M12-EL-Z	• 8 outputs 24 V DC • Signal status indication via 4 LEDs • Operating status indication (per module and per channel/output) • CPI functionality	• 8x M12 plug, 5-pin, double allocation • 2x M9 CP connection • Outputs resistant to overloads and short circuits • PNP, IP65

Key features – Input/output modules

Connecting inputs and outputs in the installation system CPI
Special features of the CP I/O modules in compact design

In addition to the sturdy and economical CP input/output modules, there is also the compact series of CP I/O modules. These have an optimised, space-saving design, are made from plastic and are very light. They are, of course, available with the high degree of protection IP65/67 (exception: clamping modules to IP20 for installation in protected installation spaces).

The compact CP modules are designed for use in handling and assembly wherever space requirements and product weight play a role.
The modules can be used in combination with the following valve terminals:
• CPV, MPA-S, CPV-SC

Application:
• The modules can be positioned even closer to the actuators thanks to the smaller dimensions.
• Same function, configuration and commissioning as sturdy or economical CP modules
• The compact CP modules and the other CP modules can be operated together on a string

• The maximum number of modules per CP string is as follows:
  – CPI system: max. 4 modules or max. 32 inputs and 32 outputs
  – CP system: one valve terminal/ output module and one input module

CP input modules in compact design

	CP-E08-M12x2-CL	• 8 inputs 24 V DC • Signal status indication via 8 LEDs • Operating status indication • CPI functionality	• 4x M12 plug, 5-pin, double allocation • 2x M9 CP connection • PNP, IP65/67
	CP-E08-M8-CL	• 8 inputs 24 V DC • Signal status indication via 8 LEDs • Operating status indication • CPI functionality	• 8x M8 plug, 3-pin, single allocation • 2x M9 CP connection • PNP, IP65/67
	CP-E16-KL-CL	• 16 inputs 24 V DC • Indirect signal status indication via LEDs in the connection set of the tension-spring socket • Operating status indication • CPI functionality	• Screw terminal or tension-spring sockets • 2x M9 CP connection • PNP, IP20

CP output modules in compact design

	CP-A04-M12x2-CL	• 4 outputs 24 V DC • Signal status indication via 4 LEDs • Operating status indication • CPI functionality	• 4x M12 plug, 5-pin, double allocation • 2x M9 CP connection • Outputs resistant to overloads and short circuits • PNP, IP65/67

Key features – Mounting options
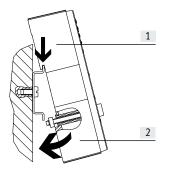

H-rail mounting
CP interface

The H-rail mounting is part of the rear profile of the CPX interlinking blocks. The CPX terminal can be attached to the H-rail using the H-rail mounting kit.

The CPX terminal is first hooked onto the H-rail (see arrow 1), then swivelled onto the H-rail and secured in place with the clamping element (see arrow 2).

The following mounting kit is required for H-rail mounting (plus mounting kit for optionally mounted valves):
• CPX-CPA-BG-NRH
This enables mounting on H-rails to EN 60715.
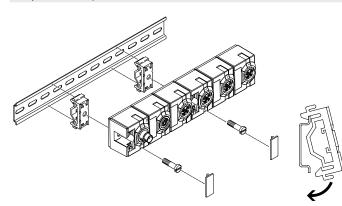

Economical CP modules

The H-rail mounting is impressed in the reverse profile of the economical CP modules. The modules can be attached to the H-rail using the H-rail mounting.

The module is first hooked onto the H-rail (see arrow 1), then swivelled onto the H-rail and secured in place with the clamping element (see arrow 2).

The scope of delivery includes the following mounting kit for H-rail mounting:
• CP-EL-HS
This enables mounting on H-rails to EN 60715.

Compact and sturdy CP modules
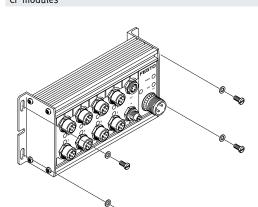

For the CP modules there is a mounting kit that can be used on an H-rail. On the compact CP modules, the mounting holes are covered by inscription labels.

The following mounting kit is needed for H-rail mounting:
• CP-TS-HS35
This enables mounting on H-rails to EN 60715.
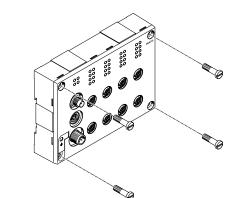

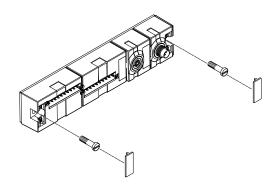

Key features – Mounting options
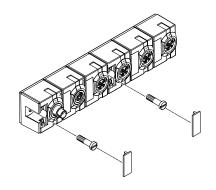

Wall mounting
CP modules

The CP modules (with screws up to 4 mm in diameter) can be mounted on even surfaces in almost any position using the mounting holes.

- | **Note**
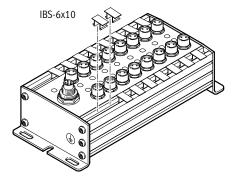

The mounting holes on the compact CP modules are covered by inscription labels.

Key features – Inscription system

Inscription system

All CP modules have holders for inscription labels.
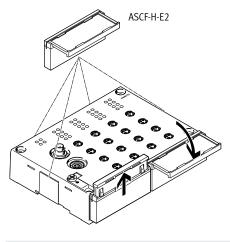

Inscription labels/label holders are not included in the scope of delivery and can be ordered separately.

The labels can be pre-assembled on request.

Sturdy CP modules

IBS-6x10
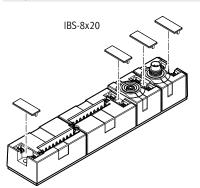

The sturdy CP modules have two slots in which the inscription labels IBS-6x10 (part no. 18576) can be fitted. At least one inscription label can be fitted per connection.

The IBS-6x10 are plastic clips that can be printed on, written on or affixed with labels.

Economical CP modules

ASCF-H-E2

The economical CP modules have six fixtures on the side, each for one inscription label holder ASCF-H-E2 (part no. 547473).

The ASCF-H-E2 are transparent, hinged inscription label holders for holding premade paper inscription labels. The label can be read when the label holder is opened out.

Compact CP modules

IBS-8x20

The compact CP modules have a holder for an inscription label IBS-8x20 (part o. 539388) for each connection.

The IBS-8x20 are plastic clips that can be printed on, written on or affixed with labels.

Key features – Power supply

Operating voltage and load current supply

The following functions are made available to the connected modules through the CP cable:
- Connection for data exchange
- Operating voltage for the internal electronics
- Load current supply for the connected inputs/sensors and/or outputs/actuators

CP-E...Z or output modules from the sturdy and the economical series have a separate load voltage supply:
- Less load on the CP interface and CP cable
- 0.5 A per output (max. 4 A supply per output module)
- 1 A per 8 inputs
- Separate disconnection of the consuming devices possible
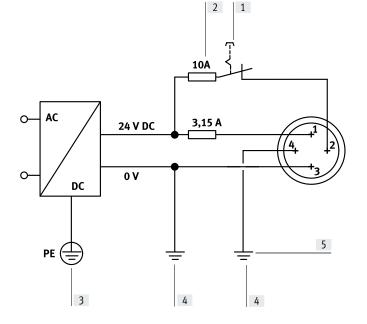

Every module in the CPI system is protected separately against overload with electronic fuses.
The input modules without additional supply provide a maximum sensor supply of 500 mA in the sturdy design, 800 mA in the compact design and 700 mA in the economical design with 16 inputs and 1400 mA with 32 inputs.

The input modules with additional supply provide up to 2 A aggregate current for the connected sensors.

Example of circuits for additional power supply

[1] Load voltage supply (can be disconnected separately)
[2] External fuses
[3] PE
[4] Equipotential bonding
[5] Earth connection pin 4, designed for 12 A
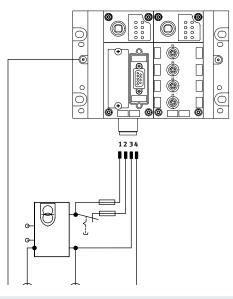

Pin allocation of plug for additional power supply			
Pin allocation	Pin	Signal	Designation
	1	24 V DC	Supply for electronics and inputs
	2	24 V DC	Load supply for valves/outputs
	3	0 V	Equipotential bonding
	4	0 V	Earth terminal and equipotential bonding, rated for 12 A

Key features – Power supply

Power supply concept of the CPX terminal
Circuit diagram for M18 power supply/system supply (example)

1 2 3 4

The use of decentralised devices on the fieldbus – particularly with a high degree of protection for direct machine mounting – demands a flexible power supply concept.
The CPX terminal makes it easier to connect all voltages via one socket.

A distinction is made between supply for
• electronics and sensors/inputs
• valves
• actuators/outputs

Selectable connection technology:
• M18
• 7/8"
• AIDA push-pull

- ⛯ - **Note**
The CP interface connects the 0 V of the power supply for the electronics/inputs and the valves.

To prevent overloads, the power must therefore be supplied using just one power supply module or using power supply units with a common PEN conductor.

Interlinking blocks

Many applications require the voltage to be segmented into zones. This applies in particular to the separate disconnection of connected actuators (solenoid coils/outputs).

The separation of voltages for valves and the creation of different voltage segments for electrical outputs and sensors are supported by the different interlinking blocks of the CPX terminal:
• With system supply
• Without power supply
• With additional power for electrical outputs
• With additional supply for valves

The supply voltages are supplied using a
• 4-pin M18 plug
• 4-pin 7/8'' plug
• 5-pin 7/8'' plug
• AIDA push-pull, 5-pin

- ⛯ - **Note**
The max. current is limited to 12 A with the 7/8" system supply. When using a conventional pre-assembled cable, the max. current is limited to 8 A.

Key features – Diagnostics

General limits

System supply	CP interface		

The system supply provides the internal voltage for the entire CPX system with
- max. 16 A for electronics and sensors/inputs
- max. 16 A for actuators/outputs and valves

The CP interface and the CP modules connected to the CP interface get their operating voltage from the connection for electronics and sensors/inputs.

The operating voltage for the sensors/ actuators connected to the CP modules is supplied from the voltage for valves.

The CP interface supplies the connected CP modules with
- max. 1.6 A per CP string

Diagnostics

General	Diagnostics via LEDs	Diagnostics via control program	

A comprehensive diagnostic function is available for each string.
The diagnostic information can either be detected via the LEDs on the module and then read out and evaluated via the controller software (non-fieldbus-specific) or displayed directly on the CPX terminal via the diagnostic interface and then evaluated and processed.

- Error in bus communication
- POWER, power supply indicator for internal electronics
- POWER V, load voltage indicator for valves
- 0 … 3, CP string allocation changed or interrupted

There are also bus-specific LED displays.

- Configuration error
- Bus error
- Operating voltage failure
- Falling below voltage tolerance (valves)
- Short circuit in sensor voltage supply

- Operating voltage failure at the output modules
- Short circuit/overload at the output modules
- Connection to one or more CP modules interrupted (valve terminal, input/output modules)

Diagnostics via CPX terminal
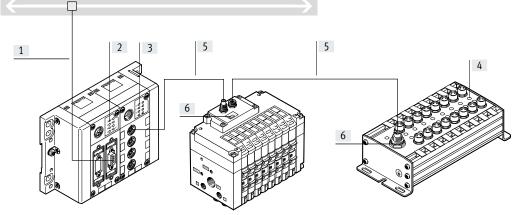

[1] Diagnostics via controller/bus node
[2] Bus-specific LEDs
[3] String diagnostics via LED on the CP interface
[4] Diagnostics via CP string
[5] Diagnostics via LED on CP module
[6] Status indicator on the CP module

Key features – CP interface

Diagnostics

Diagnostics via CP bus node

[1] Diagnostics via fieldbus
[2] Bus-specific LEDs
[3] String diagnostics via LED on the bus node
[4] Diagnostics via LED on CP module
[5] Diagnostics via CP string
[6] Status indicator on the CP module

Diagnostic LEDs on the CP modules

[1] Status LED
CP communication
(PS, green)
[2] Status LED (module) for short circuit/overload of sensor supply (red)
[3] Status LEDs for inputs (status indication, green)
[4] Status LED (group, only with CP-E16-...-EL) for short circuit/ overload of sensor supply (red)

In addition to the status indication per module and per individual channel/ input, the economical modules with 16 inputs additionally have a status indication for a group of four inputs. The following inputs are combined into groups of four:

- 0 ... 3
- 4 ... 7
- 8 ... 11
- 12 ... 15

Parameterisation

The addresses to the individual actuators/outputs or sensors/inputs, which are connected to the CP modules, are allocated in accordance with the bus node or CPX-CEC used (exception: INTERBUS node).
Address allocation is performed in accordance with the following rules:

- One CP interface provides four strings with a total of 128 input and 128 output addresses.
- A used string occupies 32 input and 32 output addresses.
- The addresses are permanently allocated to the strings and CP modules in ascending order.
- Unused address space remains reserved for future extensions.

The CP interface checks the configuration of the connected modules each time the system is switched on and during operation. If a deviation from the saved configuration is detected, an appropriate message is output via the controller software and displayed via LED.
The configuration detected is stored by pressing the Save button (after the operating voltage is switched on at the CP interface).

The configuration is stored each time the CP interface is switched off and back on.
There is an option to replace a connected CP module with an identical module during operation. Removal of more than one module from the current configuration will be detected as an error; the address spaces of these modules will no longer be actuated.

Selection aid

Datasheet – Input modules CP-E16

Function

Digital input modules make it easier to connect proximity switches or other 24 V DC sensors (inductive, capacitive, etc.).
M12 plugs with double allocation are separated using a sensor/actuator distributor.

Area of application

- Input modules for 24 V DC sensor signals
- M8 and M12 plugs, single allocation with 16 connections, double allocation with 8 connections
- M12 plug, 5-pin
- The input statuses for each input signal are indicated via an assigned LED.
- 24 V DC supply provided for all connected sensors
- Diagnostic LED for short circuit/undervoltage of sensor supply.
- Diagnostic LED for short circuit/interruption of external sensor supply with CP-E-16-M8-Z.

Datasheet – Output modules CP-A08

Function

The electrical outputs control actuators such as individual valves, lamps, signal equipment and much more.

Area of application

- Output module with 8 outputs 24 V DC
- M12 connection technology, 5-pin socket
- LED display of the switching status per channel
- Short circuit and overload detection
- Malfunction display by a green LED

-ᵷ- **Note**

Optimum actuation of valves with M12 central plug.

General technical data

Type			CP-A08-M12-5POL
			Positive switching
Number of outputs			8
Allocation of outputs			Single allocation
Output connection type			8x M12, 5-pin
Load voltage connection			M18, 4-pin
Bus connection			2 plugs M9, 5-pin, via prefabricated cables
Max. output current per channel		[A]	0.5
Operating voltage		[V DC]	24 ±25%
Load voltage connection		[V DC]	24 ±25%, reverse polarity protected
Fuse protection for power output		[A]	Electronic fuse per output 0.5
Intrinsic current consumption of electronics		[mA]	Max. 90
Overload/short circuit protection			Per channel
Switching logic			PNP to IEC 1131-2
Degree of protection to EN 60529			IP65 (when fully plugged in or fitted with protective cover)
Temperature range	Operation	[°C]	−5 ... +50
	Storage	[°C]	−20 ... +70
Material			Die-cast aluminium
PWIS conformity			VDMA24364-B2-L
Dimensions (LxWxD)		[mm]	172.9 x 78 x 57.1
Weight		[g]	500

Datasheet – Output modules CP-A08-EL

Function

The electrical outputs control actuators such as individual valves, lamps, signal equipment and much more.

> **Note**
>
> The output module is ideal for actuation of valves with M12 central plug.

Area of application

- Output module with 8 outputs 24 V DC
- M12, 5-pin connection technology
- Display of the switching status per channel via LED
- Short circuit and overload detection
- Malfunction display by a red LED
- Module supports the CPI functionality (only in combination with the CPX CP interface)
- Circumferential labelling with large, hinged inscription label
- Earthing plate and H-rail mounting already integrated

General technical data		
Type		CP-A08-M12-EL-Z
		Positive switching
Number of outputs		8
Allocation of outputs		Connection 1, 3, 5 and 7 with double allocation, connection 2, 4, 6 and 8 with single allocation
Sensor connection type		8x M12, 5-pin
Power supply 24 V DC		M12, 4-pin, A-coded
Intrinsic current consumption at operating voltage	[mA]	Typically 35
Max. aggregate current per module	[A]	4
Max. output current per channel	[A]	Max. 0.5, max. 2 outputs can be connected in parallel
Nominal operating voltage	[V DC]	24
Operating voltage range	[V DC]	18 ... 30
Residual ripple load voltage	[Vss]	4
Note concerning load voltage		Via load voltage connection (24 V DC)
Fuse protection (short circuit)		Internal electronic fuse protection for each group
Switching logic		PNP
Output characteristic		To ICE 1131-T2
Electrical isolation between channels		None
Connection to bus node		Via pre-assembled cables
Diagnostics		CP communication
		Short circuit/overload per channel
		Undervoltage
LED displays		3 module diagnostics
		8 channel status
		8 channel diagnostics

Datasheet – Output modules CP-A04

Function

The electrical outputs control actua-
tors such as individual valves, lamps,
signal equipment and much more.

Area of application

- Output module with 4 outputs
  24 V DC
- M12 connection technology, with
  5-pin sockets
- LED display of the switching status
  per channel
- Short circuit and overload detection
- Malfunction display by a red LED
- Module supports the CPI functional-
  ity (only in combination with the
  CPX CP interface)

Note

Optimum actuation of valves with
M12 central plug.

Datasheet – Valve terminals MPA-S

- **Ⅱ** - Flow rate
   MPA1: up to 360 l/min
   MPA14: up to 550 l/min
   MPA2: up to 700 l/min

- **ᒋ** - Valve width
   MPA1:   10 mm
   MPA14:   14 mm
   MPA2:   21 mm

- **ᒪ** - Voltage
   24 V DC

CPI interface for communication between a valve terminal MPA-S and a CPI master. It activates a valve terminal MPA-S with up to 32 solenoid coils on max. 16 valve positions. It is also possible to install an additional electrical supply at any other point on the valve terminal to create different voltage zones.

- **Note**

An additional electrical supply is essential for more than 16 MPA2 solenoid coils (more than 4 electronics modules).
Please note that without an additional electrical supply a maximum of 24 solenoid coils can be connected at the same time.
If more than 24 MPA1, 24 MPA14 or 12 MPA2 solenoid coils are to be connected at the same time, an additional supply must be connected at the latest after the third electronics module.

General technical data

Type			MPA-CPI-VI
CP interface, incoming			Plug M9, 5-pin
CP interface, outgoing			M9 socket, 5-pin
Max. no. of valve positions			32
Max. number of pressure zones			9
LED display (product-specific)	PS		Common message regarding power supply
	PL		Power supply for valves
	Symbol		Module error
Nominal operating voltage		[V DC]	24
Permissible voltage fluctuations		[V DC]	±25%
Power failure buffering	Logic side only	[ms]	10
Current consumption at nominal operating voltage	Load	[mA]	Dependent on valve type and number of valves
	Electronics	[mA]	Approx. 50 (plus current consumption of electronics modules)
Residual ripple		[Vss]	4
Materials			Die-cast aluminium, PA
Note on materials			RoHS-compliant

Order processing information

Configuration guidelines

The CPI system supports a certain number of modules per CP string depending on the type of the CP master and the

CP modules connected.

CP masters and CP modules can be split into two different groups:

- With CPI functionality
- Without CPI functionality.

CP modules with CPI functionality

CP modules with CPI functionality offer the following features:
- Incoming and outgoing CP interface
- Any arrangement of the modules within a CP string

- Max. 4 modules per CP string
- Max. 32 inputs and 32 outputs can be connected to each string depending on the version

CP modules without CPI functionality

Sturdy CP modules offer the following features:
- CP valve terminals and CP output modules have an incoming and outgoing CP interface

- CP input modules only have an incoming CP interface and therefore can only be positioned at the end of a CP string
- All CP modules with CPI functionality can also be connected to CP masters without extended functionality.

Information on using CP modules with and without CPI functionality

A mixture of CP modules with and without CPI functionality is possible. The following must be noted in this case:

- Only one input module without CPI functionality is possible per CP string (at the end of a CP string)

- Only one CP valve terminal or output module without CPI functionality is possible per CP string (any point in the CP string)

- Free positions in the CP string can be filled by CP modules with CPI functionality (max. 4 modules).

- ┊ - **Note**

The cable length for any given string may not exceed 10 m.

Connecting cables are available with lengths of 0.25 m, 0.5 m, 2 m, 5 m and 8 m
➔ p. 69

No more than 32 inputs and 32 outputs (sum of all 4 CP modules on a CP string) may be connected, regardless of the type of CP module (with or without CPI functionality).
