

Suction cup with connection OGVM

FESTO

Characteristics

At a glance

The suction cups with connection are used for handling components in the metal industry. Examples include the automotive industry and large household appliances. The suction cups with connection enable sheet metal and components to be handled highly dynamically. The suction cup geometry ensures minimum suction times, high inherent stability in the suctioned state and for absorbing holding and transverse forces, even on oiled surfaces. This is made possible by the special structure of the inside of the suction cup.

Engineering tools [Link smart-vacuum](#)

Save time with engineering tools Smart Engineering for the optimal solution. Our goal is to increase your productivity. Our engineering tools play an integral part in this. They help you size your system correctly, tap into unimagined productivity reserves and generate additional productivity along the entire value chain. In every phase of your project, from the initial contact to the modernisation of your machine, you will come across a number of different tools which will be of use to you.

Suction cup shape

[S] Round, standard

[G] Round, bell shape

[A] Round, bellows, 1.5 convolutions

[SV] Oval, standard

[GV] Oval, bell-shaped

[AV] Oval, bellows, 1.5 convolutions

Peripherals

Peripherals overview

Accessories		→ Link
Type/order code	Description	
[1] Suction cup with connector OGVM		ogvm
[2] Double nipple NPFC-D		19
[3] Vacuum security valve ISV	The vacuum security valves are designed to maintain the vacuum in applications where several suction cups are used and one or more suction cups fail.	19
[4] Length compensator VAL	Workpieces are handled gently thanks to compensation for a possible overstroke of the handling device or for compensating for tolerance differences in the workpiece thickness.	19
