

Toothed belt axes EGC-TB-KF, with recirculating ball bearing guide

FESTO

Selection aid

Overview of toothed belt and ball screw axes

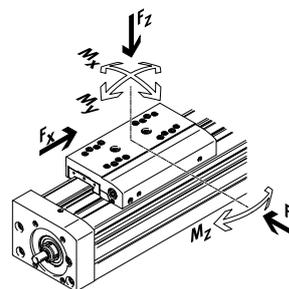

Toothed belt axes

- Speeds of up to 10 m/s
- Acceleration of up to 50 m/s²
- Repetition accuracy of up to ±0.08 mm
- Strokes of up to 8500 mm (longer strokes on request)
- Flexible motor mountings

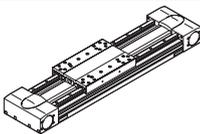

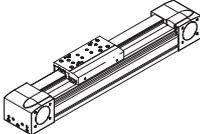

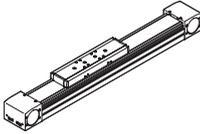

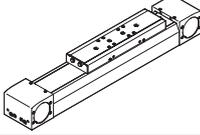

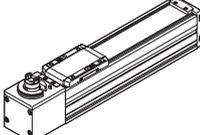

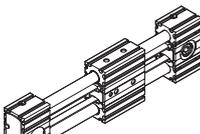

Ball screw axes

- Speeds of up to 2 m/s
- Acceleration of up to 20 m/s²
- Repetition accuracy of up to ±0.003 mm
- Strokes up to 3000 mm

Coordinate system

Toothed belt axes

Key features

At a glance

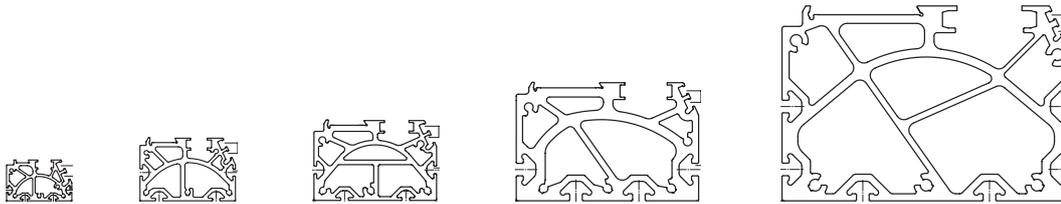

- Generously sized profiles with an optimised cross section enable maximum rigidity and load capacity
- Speed, acceleration and torque resistance set a new standard
- Numerous sizes and variants such as protected guides open up a broad range of applications
- Due to the EGC's high performance it is often possible to use a smaller size
- Space-saving position sensing with proximity switch in the profile slot is possible
- Toothed belt material can be selected from:
 - Chloroprene rubber for long service life
 - Coated PU with steel reinforcement cords for long service life and resistance to certain cooling lubricants
- Wide range of adaptation options on the drives
- Extensive mounting accessories for multi-axis combinations
- EX3: for use in potentially explosive areas

Flexible motor mounting

The motor position can be freely selected on 4 sides and can be changed at any time.

Wide range for various load cases

Characteristic values of the axes

The specifications shown in the table are maximum values.

The precise values for each of the variants can be found in the relevant data sheet in the catalogue.

Standard slide

Extended slide

Additional slide

Guide options

Protected version

- The protected guide cleans the guide rail and protects the recirculating ball bearing guide with the aid of an additional wiper

With central lubrication

→ Page 22

- The lubrication adapters enable the guide to be permanently lubricated using semi- or fully automatic relubrication devices
- The adapters are suitable for oils and greases
- All lubrication connections must be connected

Displacement encoder

→ Page 13

- The position of the slide can be sensed directly when using the incremental displacement encoder. This means that all elasticities of the drivetrain can be detected and corrected by the motor controller.

Clamping unit

→ Page 14

- 1- or 2-channel design, for holding loads
- Reliable holding is guaranteed since the forces act directly on the slide
- A limited number of emergency braking operations are permissible with sizes 120 and 185

Key features

Complete system comprising toothed belt axis, motor, motor controller and motor mounting kit

Toothed belt axis with recirculating ball bearing guide

Motor

Servo motor:
EMMT-AS
Stepper motor:
EMMB-ST, EMMT-ST

Note

There are specially matched complete solutions for the toothed belt axis EGC and the motors.

Servo drives

Servo drive:
CMMT-AS
Servo drive for extra-low voltage:
CMMT-ST

Motor mounting kit

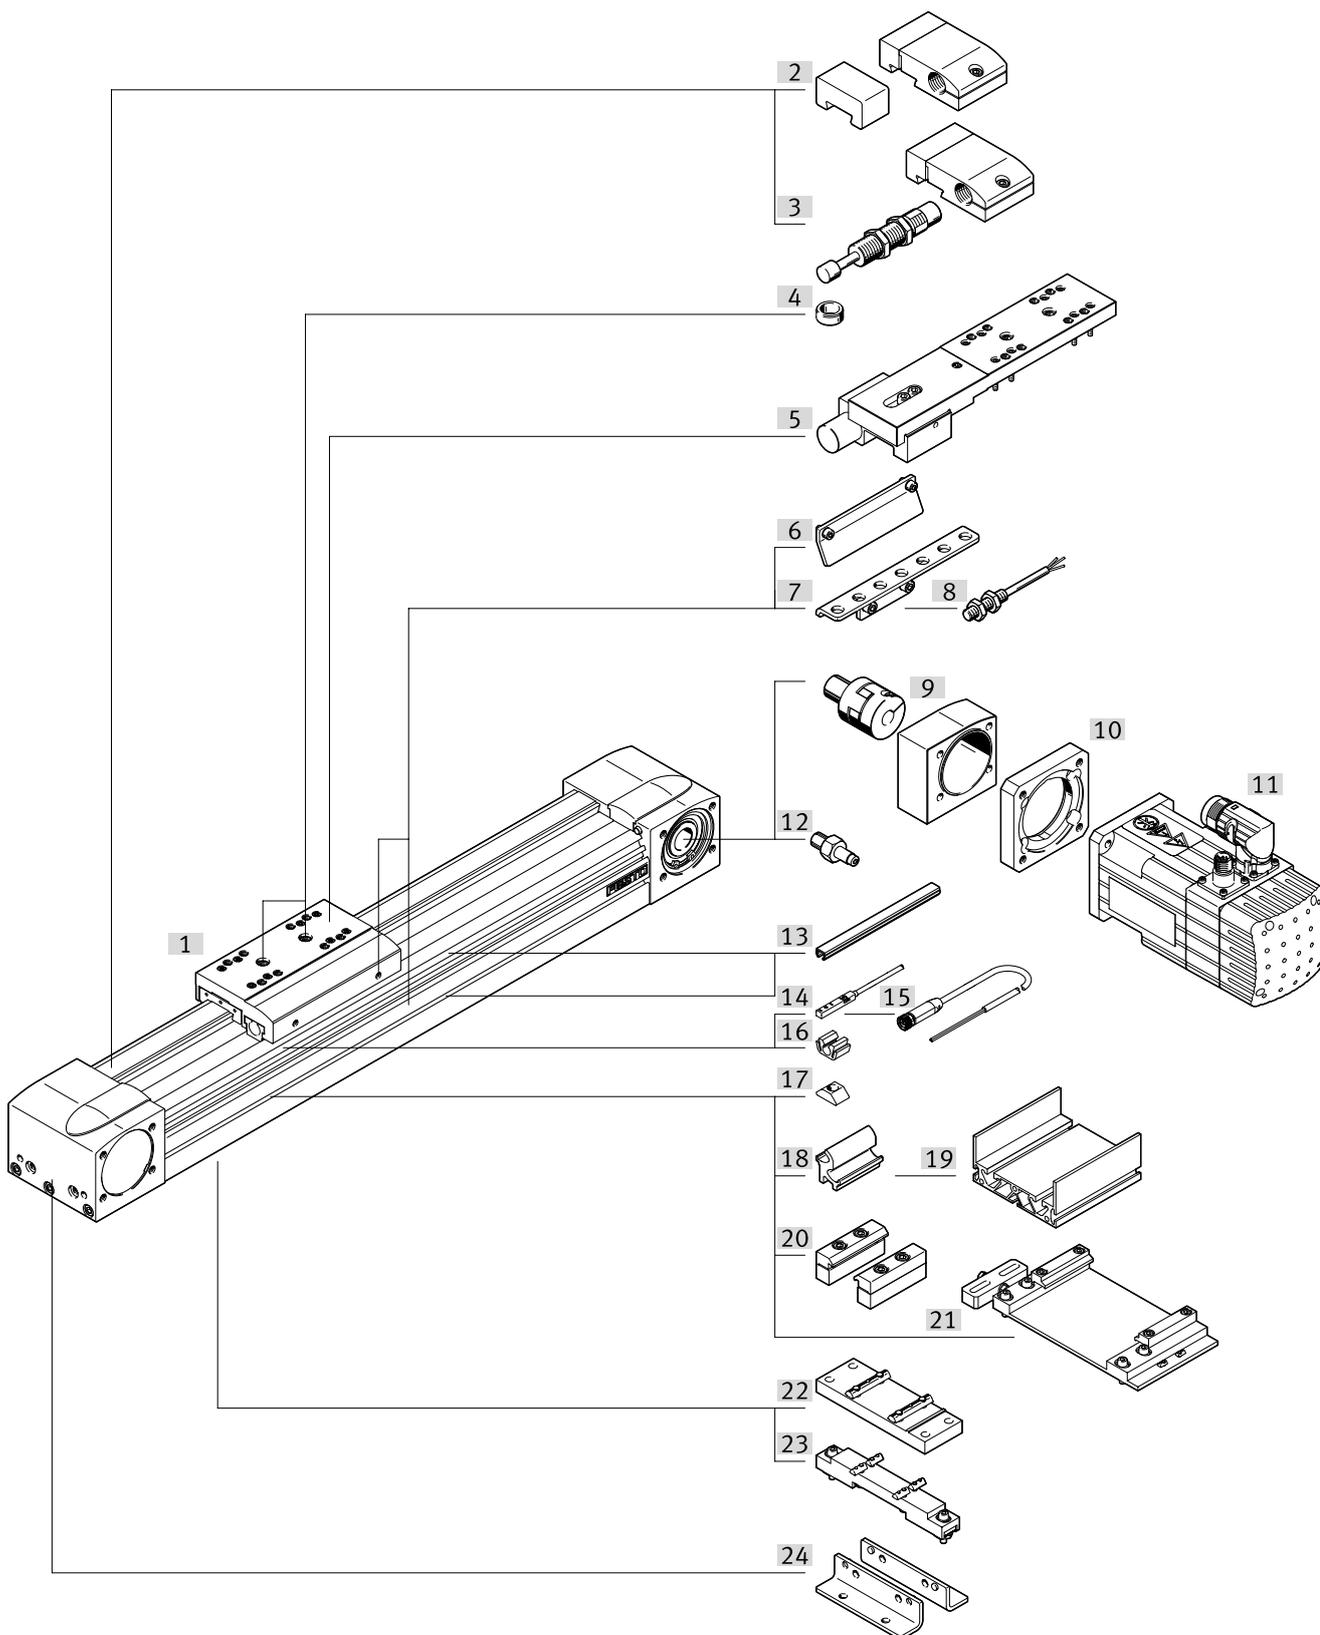

Axial kit

Kit consists of:

- Motor flange
- Coupling housing
- Coupling
- Screws

Peripherals overview

Variants and accessories		
Type	Description	→ Page/Internet
[1] Toothed belt axis EGC-TB-KF	Electric drive	10
[2] Emergency buffer with retaining bracket NPE	For avoiding damage at the end stop in the event of malfunction	54
[3] Shock absorber with retaining bracket KYE	For avoiding damage at the end stop in the event of malfunction	54
[4] Centring pin/sleeve ZBS, ZBH	<ul style="list-style-type: none"> • For centring loads and attachments on the slide • Included in the scope of delivery: <ul style="list-style-type: none"> – With size 50, 70: 2x ZBS-5 – With size 80, 120, 185: 2x ZBH-9 	54
[5] Clamping unit 1H...-PN, 2H-PN	For holding loads	14
[6] Switch lug SF-EGC-1	For sensing the slide position	51
[7] Sensor bracket HWS-EGC	Adapter for mounting the inductive proximity switches (round design) on the axis	52
[8] Proximity switch, M8 SIEN	Inductive proximity switch, round design	55
[9/ 10]] Axial kit EAMM	For axial motor mounting (comprising coupling, coupling housing and motor flange)	eamm-a
[11] Motor EMMT	Motors specially matched to the axis, with or without gear unit, with or without brake	emmt
[12] Drive shaft adapter EAMB	<ul style="list-style-type: none"> • Can be used as an alternative interface, as required • No drive shaft adapter is required for the axis/motor combinations → page 46 onwards 	53
[13] Slot cover ABP	<ul style="list-style-type: none"> • For protection against contamination 	54
[14] Proximity switch, T-slot SIES	Inductive proximity switch, for T-slot	55
[15] Connecting cable NEBA	For proximity switches	56
[16] Clip SMBK	For mounting the proximity switch cable in the slot	54
[17] Slot nut NST	For mounting attachments	54
[18] Adapter kit DHAM	For mounting the support profile on the axis	55
[19] Support profile HMIA	For mounting and guiding an energy chain	55
[20] Profile mounting MUE	For mounting the axis on the side of the profile	47
[21] Adjusting kit EADC-E16	For mounting the axis on a vertical surface. Once mounted, the axis can be aligned horizontally	50
[22] Central support EAHF-L5	For mounting the axis on the profile from underneath	48
[23] Adjusting kit EADC-E15	Height-adjustable. Can be used to easily compensate for any unevenness in the bearing surface	49
[24] Foot mounting HPE	For mounting the axis on the end cap	46
– Guide axis EGC-FA	Axis without drive	egc-fa
– Connecting shaft KSK	For connecting two toothed belt axes EGC-TB in three-dimensional gantries	ksk

 **Note**

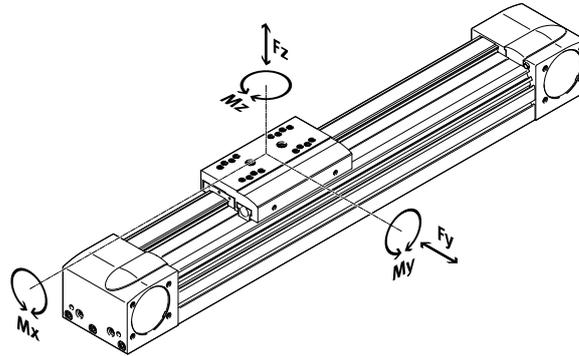

The axis can only be relubricated with the lubrication adapter (EGC-...-C) when used in combination with the clamping unit.

Datasheet

Characteristic load values

The indicated forces and torques refer to the slide surface. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect.

These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

Max. permissible forces and torques at reference service life

Size	50	70	80	120	185
Reference service life [km]	5000				
$F_{y_{max}}$ [N]	650	1850	3050	6890	15200
$F_{z_{max}}$ [N]	650	1850	3050	6890	15200
$M_{x_{max}}$ [Nm]	3.5	16	36	144	529
$M_{y_{max.}}/M_{z_{max.}}$					
EGC-...-GK/-GP [Nm]	10	51	97	380	1157
$M_{y_{max.}}/M_{z_{max.}}$					
EGC-...-GV/-GQ [Nm]	–	132	228	680	1820

Note

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of $f_v \leq 1$, based on the maximum permissible forces and torques for a service life of 5000 km.

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

F_1/M_1 = dynamic value

F_2/M_2 = maximum value

Datasheet

Calculating the service life

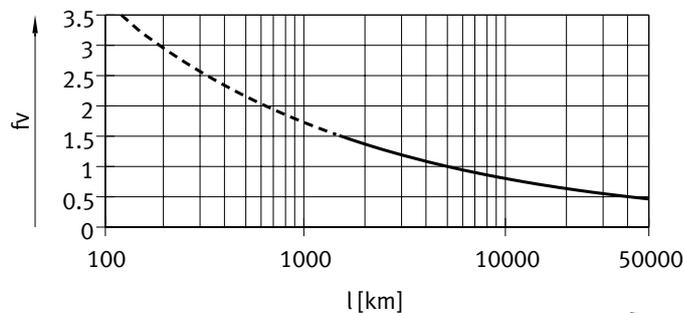

The service life of the guide depends on the load. To be able to make a statement as to the service life of the guide, the graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor f_v greater than 1.5.

Load comparison factor f_v as a function of service life

Example:

A user wants to move an X kg load. Using the formula (→ page 15) gives a value of 1.5 for the load comparison factor f_v . According to the graph, the guide would have a service life of approx. 1500 km. Reducing the acceleration reduces the M_z and M_y values. A load comparison factor f_v of 1 now results in a service life of 5000 km.

Note

Engineering software
Electric Motion Sizing
www.festo.com/x/electric-motion-sizing

The engineering software can be used to calculate the guide workload for a service life of 5000 km.

$f_v > 1.5$ are only theoretical comparison values for the recirculating ball bearing guide.

Comparison of the characteristic load values for 5000 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of the bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km to ISO or 50 km to JIS.

As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes EGC with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

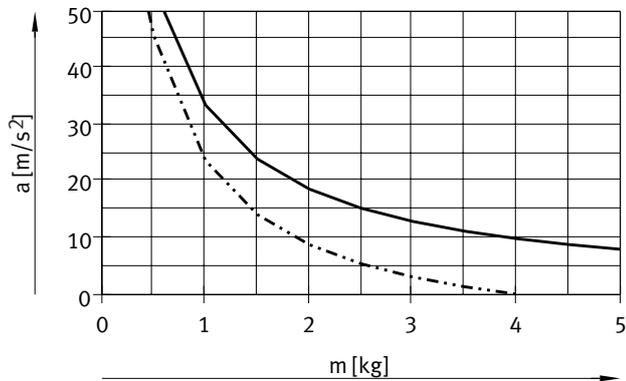

Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Datasheet

Stroke reserve

Stroke length Stroke reserve

The selected stroke corresponds in principle to the required working stroke. The variants GK/GV do not have a wiper seal on the guide. These variants therefore have an additional safety distance between the drive cover and slide that is not designated as part of the working stroke.

A safety distance (similar to GK/GV) between the drive cap and slide can be defined for the variants GP/GQ and GK-C/GV-C using the modular product system via the "stroke reserve" feature. With the variants GK/GV, the stroke reserve and safety distance are added for each end position.

- The stroke reserve length can be freely selected
- The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke

Example:

EGC-70-500-TB-KF-20H-...
 Working stroke = 500 mm
 2x stroke reserve = 40 mm
 Total stroke = 540 mm
 (540 mm = 500 mm + 2x 20 mm)

Size	50	70	80	120	185
L9 = safety distance with GK/GV (per end position) [mm]	–	10.5	13	18	21

Working stroke reduction

With standard slide GK/GP / extended slide GV/GQ with additional slide KL/KR

- For a toothed belt axis with additional slide, the working stroke is reduced by the length of the additional slide and the distance between the two slides
- If the variant GP/GQ is ordered, the additional slide is also protected
- If the variant GV/GQ is ordered, the additional slide is not extended
- If the variant GK-C/GV-C is ordered, the additional slide is also supplied with lubrication adapters

L16 = Slide length

L17 = Additional slide length

L18 = Distance between the two slides

[1] Additional slide

Example:

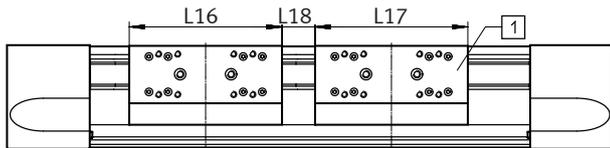

Type EGC-70-500-TB-...-GK-KL/KR

Working stroke without additional slide = 500 mm

L18 = 20 mm

L16, L17 = 100 mm

Working stroke with additional slide = 380 mm
 (500 mm – 20 mm – 100 mm)

Dimensions – Additional slide

Datasheet

Working stroke reduction per side

With integrated emergency buffer NPE/shock absorber YSRW with shock absorber retainer KYE

- The working stroke is reduced by the total dimension of the emergency buffer/shock absorber and shock absorber retainer.
- The rubber buffer in the cap must be removed.
- Shock absorbers must not be used in combination with lubrication adapters.

Size		50	70	80	120	185
With emergency buffer	[mm]	30	43	68	98	133
With shock absorber	[mm]	26	42	63	84	107

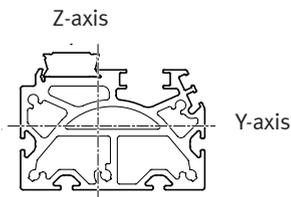

Working stroke reduction

With integrated clamping unit

- The working stroke is reduced by the length of the clamping unit.
- With 1-channel clamping units, the stroke is reduced on one side with respect to the mounting surface
- With 2-channel clamping units, the stroke is reduced symmetrically with respect to the mounting surface of the load
- Shock absorbers must not be used in combination with the clamping unit.

Datasheet

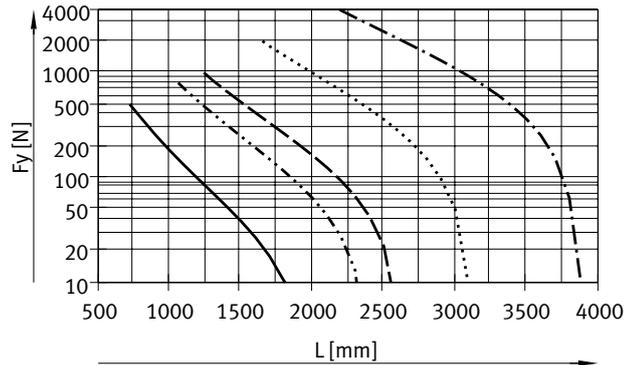

Maximum permissible support spacing L (without profile mounting MUE/central support EAHF) as a function of force F

The axis may need to be supported in order to limit deflection in the case of long strokes.

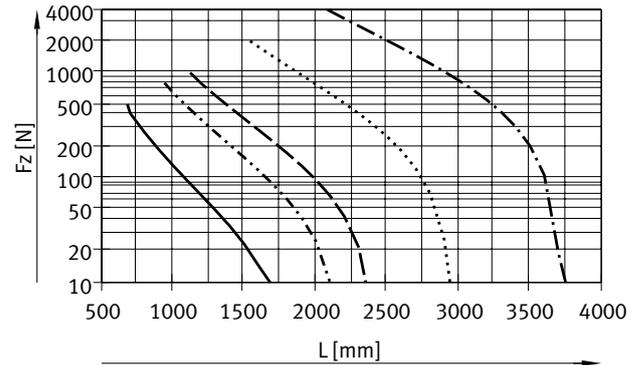

The following graphs can be used to determine the maximum permissible support spacing l as a function of force F acting on the axis. The deflection is $f = 0.5$ mm.

Force F_y

Force F_z

- EGC-50
- · - · - · EGC-70
- - - EGC-80
- · · · · EGC-120
- · - · - · EGC-185

Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functionality of the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dynamic deflection (load moves)	Static deflection (stationary load)
50 ... 185	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

Datasheet

Central lubrication

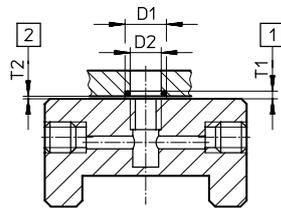

The lubrication adapters enable the guide of the toothed belt axis EGC-TB to be permanently lubricated in applications in humid or wet ambient conditions using semi or fully automatic relubrication devices.

- For size 70, 80, 120, 185
- The modules are suitable for oils and greases.
- The dimensions of the toothed belt axis EGC-TB are the same with and without central lubrication modules.
- There are three connection options on each side
- Can be used in combination with:
 - Standard slide GK
 - Extended slide GV
 - Additional slide KL, KR
- Cannot be used in combination with:
 - Protected recirculating ball bearing guide GP, GP

Additional dimensions → page 31

Design of a central lubrication system

A central lubrication system requires various additional components. The illustration shows different options (using a hand pump, pneumatic container pump or electric container pump) required as a minimum for designing a central lubrication system. Festo does not sell these additional components; however, they can be obtained from the following companies:

- Lincoln
- Bielomatik
- SKF (Vogel)

Festo recommends these companies because they can supply all the necessary components.

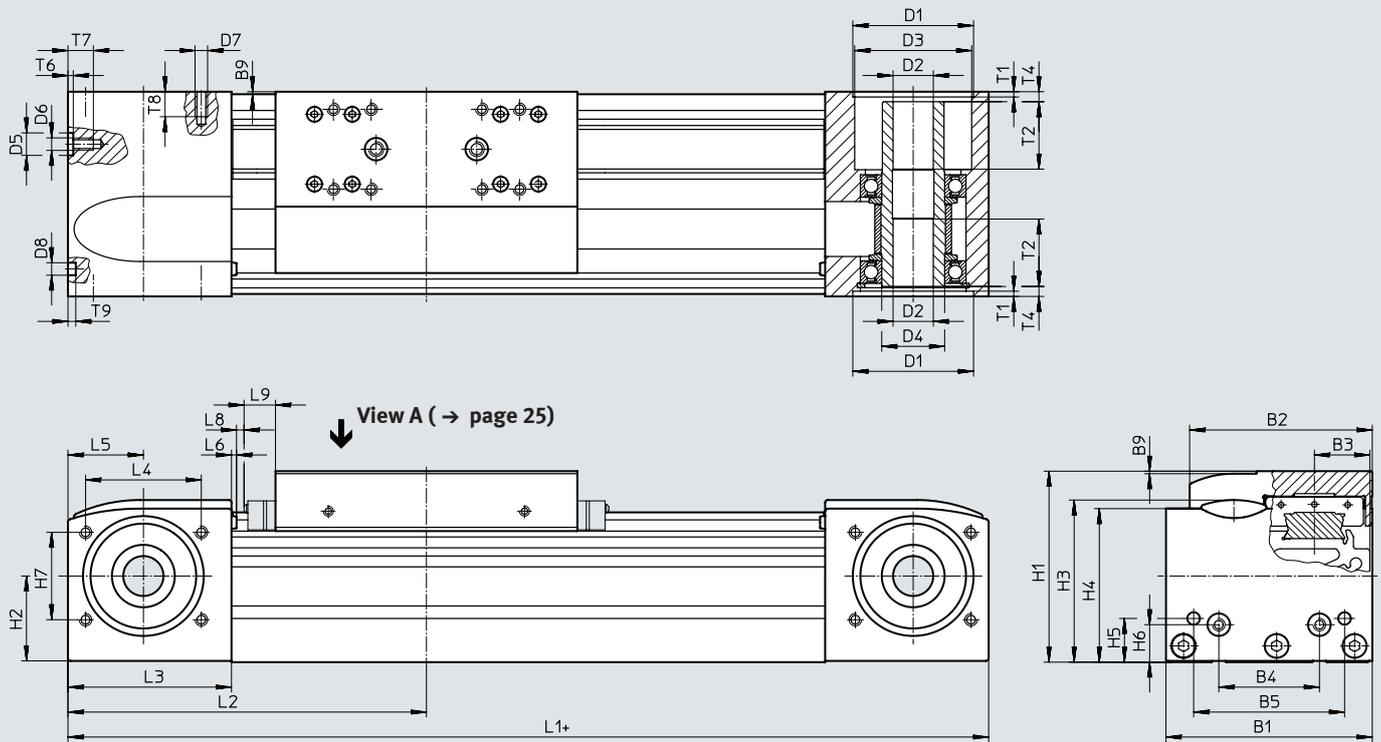

- [1] Hand pump
- [2] Pneumatic container pump
- [3] Electric container pump
- [4] Manually operated container pump
- [5] Nipple block
- [6] Distributor block
- [7] Tubing or piping
- [8] Fittings

Mounting options between axis and support profile

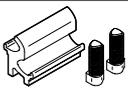

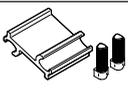

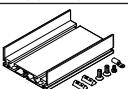

Depending on the adapter kit, the spacing between the axis and the support profile is:

$x = 20 \text{ mm}$ or 50 mm

The support profile must be mounted using at least 2 adapter kits. For longer strokes, an adapter kit must be used every 500 mm.

Example

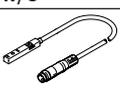

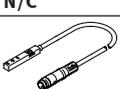

Ordering data					
	For size	Description	Part no.	Type	PU ¹⁾
Adapter kit DHAM					
	70, 80	<ul style="list-style-type: none"> For mounting the support profile on the axis Spacing between axis and profile is 20 mm 	562241	DHAM-ME-N1-CL	1
	120, 185		562242	DHAM-ME-N2-CL	
	70, 80	<ul style="list-style-type: none"> For mounting the support profile on the axis Spacing between axis and profile is 50 mm 	574560	DHAM-ME-N1-50-CL	
	120, 185		574561	DHAM-ME-N2-50-CL	
Support profile HMIA					
	70 ... 185	<ul style="list-style-type: none"> For guiding an energy chain 	539379	HMIA-E07-	1
