

Toothed belt axes ELGD-TB

FESTO

Key features

At a glance

ELGD-TB (standard design)

- Profile with a square cross section and sturdy drive elements for high feed forces
- With NSF-H1 lubricant for the food zone
- Suitable for the production of Li-ion batteries

ELGD-TB-WD (wide design)

- Reduced profile height offers smaller installation dimensions for handling systems and applications that do not require such high feed forces
- 30% lighter, while rigidity and guide load capacity are still similar to the axis in the standard design
- With NSF-H1 lubricant for the food zone
- Suitable for the production of Li-ion batteries

Innovative guide technology

- Excellent rigidity and load capacity of the guide for greater load in the same installation space
- Less vibration and smoother slide movement protect sensitive workpieces
- High speeds ensure short cycle times and a very long service life minimises downtime

Powerful drive elements

- High feed forces and acceleration for shorter process times
- Long service life and increased reliability reduce TCO

Innovative stainless steel cover strip solution

- Abrasion-free and clean surface protects workpieces from particles
- Minimised number of particles for use in cleanrooms
- Reduced ingress of dirt for use in harsh ambient conditions

Options:

- Extended or additional slide for higher axial and lateral torques and higher loads
- Two freely selectable motor positions at one end of the axis

Sealing air connection:

- Air is exchanged between the interior of the cylinder and the environment via the sealing air connection. This prevents negative pressure or excess pressure from building up inside the cylinder.
- Application of slight negative pressure prevents the emission of particles
- Application of slight excess pressure prevents the ingress of particles

Guide axis ELFD

- Driveless linear guide units with guide and freely movable slide
- The guide axis is designed to support forces and torques in multi-axis applications

Key features

Engineering tools

More information → [electric-motion-sizing](#)

Save time with smart engineering tools for the optimal solution. Our goal is to increase your productivity. Our engineering tools play an integral part in achieving this goal. They help you size your system correctly, tap into unimagined productivity reserves and generate additional productivity along the entire value chain. In every phase of your project, from the initial contact to the modernisation of your machine, you will come across a number of different tools and useful tools.

Electric Motion Sizing

- Create the optimum drive package quickly and reliably. Electric Motion Sizing calculates suitable combinations of electric axis, electric motor and servo drive using just a few application details. It provides you with all the relevant data including the bill of materials and documentation for the selected combination. This avoids design errors and results in significantly improved energy efficiency for the system. A smooth connection to the Festo Automation Suite also makes commissioning easier for you.

Graphs

More information → [elgd-tb](#)

The graphs shown in this document are also available online. These can be used to display precise values.

Orientation guide

- The side on which the labelling is applied is defined as the front.

Drive system

[TB] Toothed belt

- For applications requiring a high dynamic response and short positioning times
- For long strokes

Stroke reserve

- The stroke reserve is a safety distance from the mechanical end position and is not used in normal operation.
- The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke.

Slide design

[] Standard

[L] Long

Key features

Additional slide	
[ZL] Left	[ZR] Right

- The side on which the labelling is applied is defined as the front.
- The additional slide is always a standard slide

Lubrication	
[] Standard	[GN] Lubrication nipple

- With lifetime lubrication (this applies under standard conditions. Please refer to the operating manual for maintenance intervals for specific applications)
- Lubrication nipple not included in delivery
- The lubrication adapters enable the guide to be permanently lubricated using semi- or fully automatic relubrication devices
- The adapters are suitable for oils and greases

Type of mounting	
[M] Direct mounting	

- When direct mounting is selected, the axis is supplied with threads in the underside of the profile. It can then be mounted without profile mountings, which saves space
- Additional centring holes make it easy to install the axis in the machine

Measurement system	
[M3] With displacement encoder	

The position of the slide can be sensed directly when using the incremental displacement encoder. This means that all elasticities of the drivetrain can be detected and corrected by the motor controller

Toothed belt material	
[PU2] Coated PU	[PU1] Uncoated PU, FDA-conform

- With steel reinforcements for high rigidity
- Fabric coating for a long service life and low abrasion
- Polyurethane material for resistance to many cooling lubricants
- With steel reinforcements for high rigidity
- Blue, FDA-conform polyurethane for use in the food industry

Motor attachment	
------------------	--

- The motor can be attached to the left end of the axis at the front or rear.
- The position of the motor does not have to be specified when ordering and can be changed later
- Note: Unlike other axes from Festo, the motor cannot be mounted on both ends of the axis. However, the axis has a symmetrical design so that the left end can also be rotated to the right

1) Note operating range of proximity switches

2) This information applies under standard conditions. Please refer to the operating manual for maintenance intervals for specific applications.

Cleanroom suitability

The axis ELGD is designed for cleanroom applications and tested under typical operating conditions. The ISO class is determined using standardised testing procedures in which particle emissions are measured for several hours until stable values are reached. The classification of the cleanroom class is carried out according to ISO 14644 14 using reliable statistical methods. The tests are carried out with 100% duty cycle. The ISO class is determined over a period of 100 minutes to obtain reliable performance data.

The standard grease used in the ELGD has a low particle emission and is therefore well suited for cleanroom applications.

Our engineering team can carry out a detailed assessment for applications with specific cleanroom requirements and recommend an optimal configuration that is tailored to your process.

Size	60	80	120
Suitable for cleanrooms, measured according to ISO 14644-14	ISO class 4 (vacuum) ²⁾ ISO class 6		

1) In order to achieve the required ISO class, the axis must be cleaned and correctly prepared before commissioning.

ISO class			4			5				6				7

Toothed belt	
ELGD-...-PU2	Polyurethane with steel cord and nylon cover
ELGD-...-PU1	Polyurethane with steel cord
Guide	Steel
Profile	Anodised wrought aluminium alloy
Belt pulley	High-alloy stainless steel
Note on materials	RoHS-compliant
LABS (PWIS) conformity	VDMA24364-C1-L
Suitable for the production of Li-ion batteries	Suitable for battery production with reduced Cu/Zn/Ni values (F1a)

Technical data – Displacement encoder

Type	ELGD-...-M3
Resolution	[µm] 2.5
Max. travel speed with displacement encoder	[m/s] 7
Supply voltage	[VDC] 10 – 30 (±10%)
Current	[mA] Max. 150
Encoder signal	5 V TTL; A/A, B/B; reference signal (N/N) cyclically every 5 mm (zero pulse)
Signal output	Line driver, alternating, resistant to sustained short circuit
Electrical connection	8-pin plug connector, round design, M12
Cable length	[mm] 160

Operating and environmental conditions – Displacement encoder

Ambient temperature	[°C] –10 ... +70
Degree of protection	IP64
CE marking (see declaration of conformity)	To EU EMC Directive ¹⁾

1) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

Datasheet

Load values

The indicated forces and torques refer to the centre of the guide. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect.

The appropriate size is selected using the following three steps:

1. Check the maximum permissible values (must not be exceeded)
2. Calculate the load comparison factor
3. Determine the service life

Distance from the slide surface to the centre of the guide

Distance from the slide surface to the centre of the guide

Size	60	80	120
Dimension x [mm]	49	62	80

1. Check the maximum permissible values

Max. permissible forces and torques for the overall axis (strength limits)

Size	60		80		120	
Slide design		L		L		L
Max. force F_y , overall axis [N]	1945	3890	2800	5500	2957	5914
Max. force F_z , overall axis [N]	2000	3600	3500	5600	6500	9000
Max. torque M_x , overall axis [Nm]	41	85	106	200	251	520
Max. torque M_y , overall axis [Nm]	36	128	80	356	80	674
Max. torque M_z , overall axis [Nm]	36	133	79	383	105	527

Datasheet

Maximum permissible support spacing L as a function of force F

The axis may need to be supported in order to limit deflection in the case of long strokes.
The following graphs can be used to determine the maximum permissible support spacing L as a function of force F acting on the axis. The deflection is $f = 0.5\text{ mm}$.

Size 60

Size 80

Size 120

Datasheet

2. Calculate the load comparison factor

Note

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of $f_v \leq 1$, based on the maximum permissible forces and torques for a service life of 5000 km.

This formula can be used to calculate a guide value.

The engineering software "Electric Motion Sizing" is available for more precise calculations

→ www.festo.com/x/electric-motion-sizing

If the axis is subjected to several of the indicated forces and torques at the same time, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

F1/M1 = Values occurring in the application

F2 = Permissible values at 5000 km from the graph "load as a function of support spacing"

M2 = Maximum permissible values (see table)

Max. permissible torques for the guide calculation with reference service life

Size	60	80	120
Slide design	L	L	L
Reference service life [km]	5000		
Max. torque Mx [Nm]	38	106	170
Max. torque My [Nm]	15	42	50
Max. torque Mz [Nm]	15	42	60

Permissible guide load as a function of the support spacing

Depending on how firmly the axis is supported, the maximum permissible forces vary due to the design of the guide system.

If the axis is used as a cantilever or in yoke operation, the values for a support spacing of 2000 mm can be selected.

Size 60

Size 80

Datasheet

Permissible guide load as a function of the support spacing

Depending on how firmly the axis is supported, the maximum permissible forces vary due to the design of the guide system.
If the axis is used as a cantilever or in yoke operation, the values for a support spacing of 2000 mm can be selected.

Datasheet

3. Determine the service life

The service life of the guide depends on the load. To be able to provide an indication of the service life of the guide, the graph below plots the load comparison factor f_v against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor f_v greater than 1.3.

Load comparison factor f_v as a function of service life l

Example:

A user wants to move an x kg load. Using the formula (→ page 11) gives a value of 1.3 for the load comparison factor f_v . According to the graph, the guide would have a service life of approx. 2500 km. Reducing the acceleration reduces the M_z and M_y values. A load comparison factor f_v of 1 now gives a service life of 5000 km.

Note:

If the application has been calculated using “Electric Motion Sizing”, the average guide comparison figure represents the workload of the guide.

(100% average guide comparison figure corresponds to $f_v = 1$). With this value, the service life can be estimated using the service life graph

Comparison of the characteristic load values for 100 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of the bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km to ISO or 50 km to JIS.

As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes ELGD with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Size	60	80	120

Second moment of area

Size		60	80	120
I _y	[mm ⁴]	0.485x10 ⁶	1.213x10 ⁶	3.55x10 ⁶
I _z	[mm ⁴]	0.731x10 ⁶	2.052x10 ⁶	8.985x10 ⁶

Recommended deflection limit values

Adherence to the following limit values for deflection is recommended to ensure the continuing functionality of the axes. Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dynamic deflection (moving load)	Static deflection (stationary load)
60, 80, 120	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

Working stroke reduction

For axis ELGD with additional slide ZL/ZR

For a toothed belt axis with additional slide, the working stroke is reduced by the length of the additional slide and the distance between the two slides

L6 =	Slide length	Example:	
L2 =	Additional slide length	Type ELGD-TB-KF-60-500-...-ZR	
L3 =	Distance between the two slides	Working stroke without	
		Additional slide	= 500 mm
[1]	Additional slide	L3	= 50 mm
		L2	= 118 mm
		Working stroke with additional slide	= 332 mm
		(500 mm – 50 mm – 118 mm)

Peripherals overview

Peripherals overview

Accessories			
	Type	Description	→ Page/Internet
[1]	Toothed belt axis ELGD-TB	Electric drive	elgd-tb
[2]	Mounting kit EAHM-E...-AP	For mounting mini slide DGST or EGSC on the slide	45
[3]	Profile mounting EAHF-E24-60-P-B4	The profile mounting EAHF-E24-60-P-B4 is designed for mounting an ELGD axis onto the angle kit EHAM-AK-E24-...	44
[4]	Angle kit EHAM-AK-E24	• Suitable for a cantilever or three-dimensional gantry design • The profile mountings EAHF-E24-60-P-B4 are provided for mounting an ELGD axis onto the angle kit • When used in combination with the angle kit, the axis with a long slide must be selected	45
[5]	Profile mounting EAHF-E24-...-D...	For axis/axis mounting with adapter plate	44
[6]	Proximity switch, T-slot SIES-8M	Inductive proximity switch, for T-slot	46
[7]	Slot cover ABP-S	For protection against contamination	47
[8]	Clip SMBK	For mounting the proximity switch cable in the slot	47
[9]	Profile mounting EAHF-E24-...-S	For mounting the axis on the side of the profile	44
[10]	Profile mounting EAHF-E24-...	For mounting the axis on the side of the profile	44
[11]	Mounting kit EAHM-E15-K	For mounting the axis on the side of the profile	45
[12]	Adjusting kit EADC-E15	Height-adjustable. Can be used to easily compensate for any unevenness in the bearing surface	45
[13]	Adjusting kit EADC-E16	For mounting the axis on a vertical surface. Once mounted, the axis can be aligned horizontally	45
[14]	Sensor bracket EAPM-E24-SHO	For mounting third-party sensors on the axis	46
[15]	Sensor OMRON	Third-party sensor OMRON, EE-SX674 series	–
[16]	Sensor bracket EAPM-E24-SHE	For mounting the inductive proximity switches SIEN-M8 (round design) on the axis	46
[17]	Proximity switch, M8 SIEN-M8	Inductive proximity switch, round design	47
[18]	Switch lug EAPM-E24-SLS	For sensing the slide position using inductive proximity switch SIES-8M or for optical sensors (Omron) with sensor bracket EAPM-E24-SHO	46
[19]	Switch lug EAPM-E24-SLE	For sensing the slide position using inductive proximity switch SIEN-M8 (round design) and sensor bracket EAPM-E24-SHE	46
[20]	Axial kit EAMM	For axial motor mounting	eamm-a
[21]	Motor EMMT	Motors and kits specially matched with the axis Detailed information: www.festo.com/catalogue/... Engineering tool: www.festo.com/x/electric-motion-sizing	emmt

Accessories

Permitted axis/motor combinations for axial kits

Full information is available via the following link:

- Axis/motor combinations
- Permitted third-party motors
- Technical data
- Dimensions

For axial kits → [eamm-a](#)

Connecting shaft KSK

- For synchronising two base axes in gantry systems

Full information is available via the following link:

Connecting shaft → [ksk](#)

Profile mounting EAHF-E24-...-P-S

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120, WD-100, WD-120	F1a	Anodised wrought aluminium alloy	18 g	8197128	EAHF-E24-60-P-S

Profile mounting EAHF-E24-...-P

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120, WD-100, WD-120	F1a	Anodised wrought aluminium alloy	71 g	8197132	EAHF-E24-60-P

Profile mounting EAHF-E24-...-P-D...

	Description ¹⁾	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	ELGD-60 on ELGD-60-L ¹⁾	F1a	Anodised wrought aluminium alloy	87 g	8197131	EAHF-E24-60-P-D5
	ELGD-60 on ELGD-80			119 g	8197129	EAHF-E24-60-P-D4
	ELGD-60 on ELGD-WD-100-L ¹⁾			133 g	8197130	EAHF-E24-60-P-D6
	ELGD-80 on ELGD-WD-100-L			133 g	8197130	EAHF-E24-60-P-D6
	ELGD-80 on ELGD-120-L			165 g	8229954	EAHF-E24-60-P-D7
	ELGD-WD-100-L on ELGD-120-L			165 g	8229954	EAHF-E24-60-P-D7

1) With these combinations, the axis is mounted off-centre on the slide (see dimension L13 on the dimensional drawing with long slide).

Profile mounting EAHF-E24-60-P-B4

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120, WD-100, WD-120	F1a	Anodised wrought aluminium alloy	72 g	8226570	EAHF-E24-60-P-B4

Accessories

Mounting kit EAHM-E15-K					
	Description	Adapter plate material	Product weight	Part no.	Type
	For size 60	Anodised aluminium	242 g	8234422	EAHM-E15-K-60-E24
	For size 80	Anodised aluminium	277 g	8234423	EAHM-E15-K-80-E24

Adjusting kit EADC-E15					
	Description	Adapter plate material	Product weight	Part no.	Type
	For size 60	Anodised wrought aluminium alloy	377 g	8234417	EADC-E15-60-E24
	For size 80	Anodised wrought aluminium alloy	466 g	8234418	EADC-E15-80-E24

Adjusting kit EADC-E16					
	Description	Adapter plate material	Product weight	Part no.	Type
	For size 60	Anodised wrought aluminium alloy	650 g	8234412	EADC-E16-60-E24
	For size 80	Anodised wrought aluminium alloy	715 g	8234413	EADC-E16-80-E24
	For size 120	Anodised wrought aluminium alloy	845 g	8234414	EADC-E16-120-E24

Mounting kit EAHM-E...-AP						
	Description	For assembly	Adapter plate material	Product weight	Part no.	Type
	For size 60	EGSC-45/60 DGST-12/16	Anodised aluminium	449 g	8238432	EAHM-E24-AP-60
	For size 80	EGSC-60 DGST-16/20	Anodised aluminium	722 g	8238433	EAHM-E24-AP-80
	For size 120	DGST-20/25	Anodised aluminium	887 g	8238435	EAHM-E26-AP-120

Angle kit EHAM-AK-E24							
	Description	For assembly	Mounting position	Adapter plate material	Product weight	Part no.	Type
	ELGD-60 on ELGD-80-L	Cantilever systems	Left	Anodised aluminium	2240 g	8240704	EHAM-AK-E24-80-E24-60-ML-L
		Cantilever systems	Right	Anodised aluminium	2240 g	8240705	EHAM-AK-E24-80-E24-60-MR-L
	ELGD-80, ELGD-WD-100, ELGD-WD-120 on ELGD-80-L	Three-dimensional gantry	Left	Anodised aluminium	2580 g	8240706	EHAM-AK-E24-80-E24-80-ML-S
		Three-dimensional gantry	Right	Anodised aluminium	2580 g	8240707	EHAM-AK-E24-80-E24-80-MR-S

Accessories

Switch lug EAPM-E24-...-SLS

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120	F1a	Steel	32 g	8197117	EAPM-E24-60-SLS

Switch lug EAPM-E24-...-SLE

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120	F1a	Steel	20 g	8197116	EAPM-E24-60-SLE

Sensor bracket EAPM-E24-...-SHE

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120	F1a	Steel	103 g	8197123	EAPM-E24-60-SHE

Sensor bracket EAPM-E24-...-SHO

	Description	Suitable for the production of Li-ion batteries	Material	Product weight	Part no.	Type
	For size 60, 80, 120	F1a	Steel	67 g	8197121	EAPM-E24-60-SHO

Proximity switch for T-slot, inductive

Datasheets → Internet: sies

	Type of mounting	Switching out-put	Electrical connection	Cable length [m]	Part no.	Type
