

Pressure vacuum generator PGVA

FESTO

Characteristics

At a glance

The pressure/vacuum generator is used for the decentralised generation and supply of compressed air and vacuum.

This allows pressure or vacuum-controlled solutions to be pneumatically supplied via a 24 V power supply. The unit is ideal for small-scale or mobile applications, such as the pressure-controlled handling of liquids in automated laboratory systems.

The pressure and vacuum generator PGVA is a complete solution and integrates the compressor including filtration and the buffer tanks into a single unit. Pressure and vacuum supply is either individually controlled or via preset values. The unit is very easy to integrate mechanically and connect electrically using defined interfaces.

Highlights:

- Complete solution with integrated compressor
- Proportional pressure/vacuum regulation or preset fixed values
- Flexible to use and easy to integrate
- Easy to operate and configure
- Dynamic and precise

Controlled pressure/vacuum generation using pressure and vacuum generator PGVA-1

- The pressure and vacuum are generated in a closed control loop consisting of integrated compressor, buffer reservoir, pressure sensors and proportional valve. Using a standardised communication interface, the required pressure level can be set manually via the operator panel or automatically by a logic controller. Pressure and vacuum are supplied via the same duct at the output. A hydrophobic filter can be connected to it to prevent the ingress of potentially contaminated or humid air. This external filter is available separately from the spare parts catalogue.

Constant pressure/vacuum generation using PGVA-2 pressure and vacuum generator

- The supply of pressure and vacuum is ensured via two independent ducts at the output. The pressure and vacuum level is generated based on the preset fixed values. This eliminates the communication interface for adjustable control within the pressure and vacuum generator. A 24 V power supply is sufficient to guarantee the supply.

Number of output channels

[1] 1 single channel

PGVA-1 has one output channel.

[2] 2 channels

PGVA-2 has two output channels.

Pressure regulation

[P] Proportional

[] None

Filter design

The external filter module PFEG-33-B2.4-G:SP (part no. 8210756) is available separately from the spare parts catalogue and is not included in the scope of delivery for the PGVA.

Filter module:

- The filter module reduces the ingress of liquids and particles into the pressure vacuum generator. The effectiveness of the filter module depends on the vacuum level, the duration of the aspiration process and the liquid to be aspirated.
- The use of the external filter module is mandatory when using the PGVA for liquid handling applications. Failure to do so may result in avoidable failures of the PGVA due to misuse caused by the user.

Diagrams [Link pgva](#)

The diagrams shown in this document are also available online. These can be used to display precise values.

Type code

001	Series

Datasheet

General technical data PGVA-1

Number of output channels	1 single channel	2 channels
Mounting position	optional	
Type of mounting	with female thread M4	
Display	LED	
Pneumatic connection, port 1	QS-4	
Output pressure 1	-0.45 bar	-0.62 bar
Output pressure 2	0.45 bar	0.8 bar
Grade of filtration	0.01 µm	
Standard flow rate (standardised to DIN 1343)	1 l/min	1.2 l/min
Product weight	3.2 kg	1.8 kg
Dimensions (W x L x H)	210 mm x 208 mm x 76 mm	169 mm x 208 mm x 55 mm

Electrical data PGVA-1

Number of output channels	1 single channel	2 channels
Electrical power consumption	19 W	11 W
Nominal operating voltage DC	24 V	
Permissible voltage fluctuations	+/- 10%	
Power supply, function	Digital output Load and functional earth	Load and functional earth
Power supply, connection type	Socket	
power supply, connection system	Terminal strip	
Power supply, number of pins/wires	5	

Operating and environmental conditions PGVA-1

Storage temperature	-20 ... 70°C
Ambient temperature	0 ... 40°C
Relative air humidity	0 - 85%, Non-condensing
Sound power level	55 dB(A)
Vibration resistance	Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6
Shock resistance	Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27
Absolute accuracy in ± %FS at room temperature	1 %FS
Degree of protection	IP20
Approval	RCM trademark
Corrosion resistance class CRC ¹⁾	0 - No corrosion stress
CE mark (see declaration of conformity) ²⁾	To EU EMC Directive In accordance with EU RoHS Directive
UKCA marking (see declaration of conformity) ³⁾	To UK instructions for EMC To UK RoHS instructions
