

Mass flow controller VEFC

FESTO

Characteristics

At a glance

Description:

- Based on piezo technology, the low-noise mass flow controller with minimal power consumption and compact dimensions is suitable for a wide range of applications.

Benefits:

- Very low power consumption
- High dynamic response
- Very low self-heating
- Completely silent
- Excellent price/performance ratio
- Sturdy and durable
- Linear control behaviour
- Small installation space and low weight

Operating mode:

- VEFC is a mass flow controller. The flow rate is controlled in a closed control loop.
- The setpoint value for the mass flow can be specified in analogue form or via Modbus® RTU, and the actual value is also fed back in analogue and digital form via Modbus® RTU.
- Mass flow measurement is carried out using the pressure difference method.

Range of applications:

- The mass flow controller VEFC is used for controlling a mass flow rate proportional to a specified setpoint value.
- A filter may need to be installed downstream, or an initial rinsing cycle may need to be carried out for applications with special requirements, for example with regard to technical cleanliness and being free from particles.
