

Solenoid valves VUVG/valve terminals VTUG

FESTO

Key features

Innovative

- Festo-specific I-Port interface for bus nodes (CTEU)
- IO-Link® mode for direct connection to a higher-level IO-Link master
- Festo-specific I-Port interface with interlock
- Flexible multi-pin plug connection using Sub-D or ribbon cable
- Reversible piston spool valves, up to 24 valve positions
- Reduced power consumption
- Excellent price/performance ratio

Versatile

- Choice of quick push-in connectors
- Multiple pressure zones possible
- Sub-D variant and fieldbus interface with protection to IP67
- Internal or external pilot air with the same manifold rail possible by using blanking plugs
- Sub-base valves with working ports underneath for installation in control cabinets

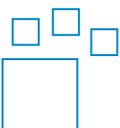

Reliable

- Sturdy and durable metal components
 - Valves
 - Manifold rails
- Fast troubleshooting thanks to LED indicator
- Manual override: choose from non-detenting, detenting or covered

Easy to install

- Easy to mount thanks to captive screws and seal
- Easy-to-change connection technology
- Label holder for labelling

Ordering data – Product options

Configurable product
This product and all its product options can be ordered using the configurator.

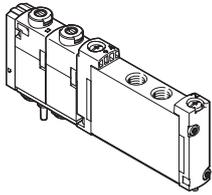

The configurator can be found at
→ www.festo.com/catalogue/...
Enter the part number or the type.

Part no.	Type
573606	VTUG

Key features

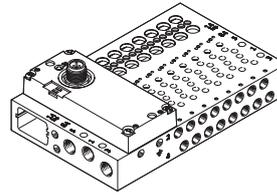

Sub-base and semi in-line valves for valve terminal VTUG

VUVG-S...1T1, semi in-line valve

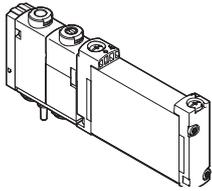

In the case of semi in-line valves, the supply ports (1, 3 and 5) are connected to the valve via pneumatic links (e.g. sub-base). The working ports (2, 4) are on the valve.

Valve terminal VTUG with different electrical connections

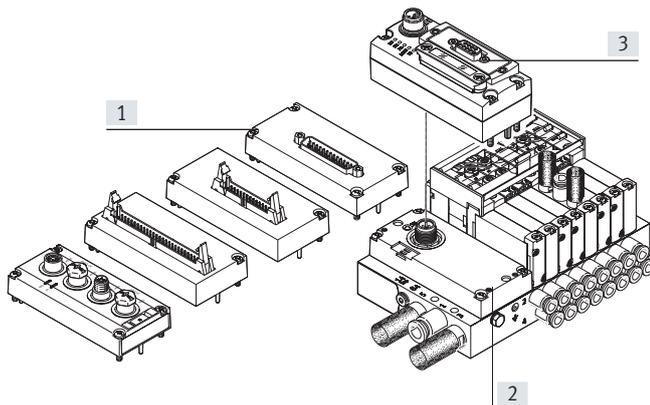

VUVG-B...1T1, sub-base valve

In the case of sub-base valves, the supply ports (1, 3 and 5) and the working ports (2, 4) are connected to the valve via pneumatic links (e.g. sub-base).

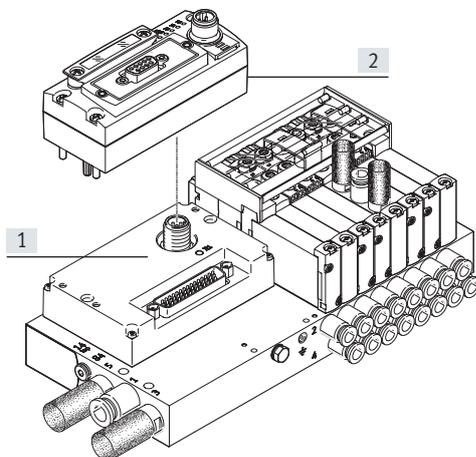

Overview – Valve terminal with multi-pin plug connection and fieldbus interface

Different electrical connections:

- [1] Ribbon cable or Sub-D
- [2] I-Port interface
- [3] Bus node CTEU

Overview – Valve terminal with interlock

Different electrical connections:

- [1] I-Port interface with interlock
- [2] Bus node CTEU

Key features

Equipment options

Valve functions

- 2x 3/2-way, 3/2-way, 5/2-way, 5/3-way valves
- Reversible piston spool valves, up to 24 valve positions

Electrical connection options

- IO-Link® mode for direct connection to a higher-level IO-Link master
- Festo-specific I-Port interface for bus nodes (CTEU)
- Flexible multi-pin plug connection using Sub-D or ribbon cable
- Festo-specific I-Port interface with interlock (for valves of size 10 mm)

Basic valves VUVG

Size

- 10
- 14
- 18

Variants

- Semi-in-line valve
- Sub-base valve

Valve functions

3/2-way valve

- Single solenoid
- Normally open
- Normally closed

2x 3/2-way valve

- Single solenoid
- Normally open
- Normally closed
- 1x normally closed, 1x normally open
- Mechanical spring
- Pneumatic spring

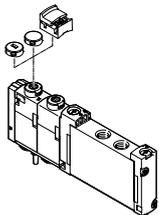

5/2-way valve

- Single solenoid
- Pneumatic/mechanical spring
- Mechanical spring
- Pneumatic spring
- Double solenoid valve

5/3-way valve

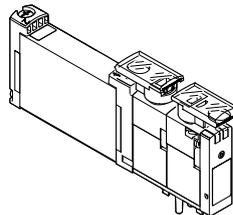

- Mid-position pressurised
- Mid-position exhausted
- Mid-position closed

Cover caps for manual override

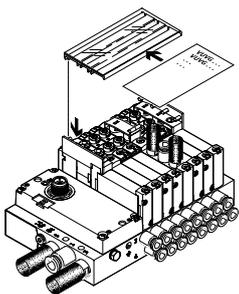

- Closed cover cap, covered manual override
- Slotted cover cap, non-detenting manual override
- Cover cap for detenting actuation without tools

Inscription label holder

Inscription label holders ASLR-D-L1 for identifying the valves and as a covering for the manual override.

Inscription label holder

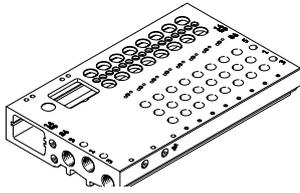

Label holders ASCF-H-L1-... for identifying the valves on the valve terminal VTUG

Key features – Pneumatic components

Manifold rail

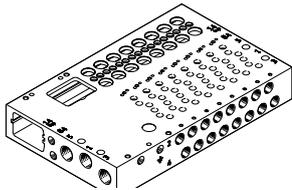

For semi in-line valves

The semi in-line valves are supplied with external pilot air. The pilot air is set via the manifold rail. The scope of delivery of the manifold rail includes a short and a long blanking plug for setting the pilot air.

- For semi in-line valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)
- For 2x 3/2-way, 5/2-way and 5/3-way valves
- 4 to 24 valve positions with electrical links

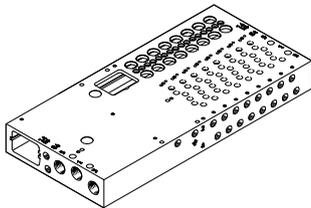

For sub-base valves

The sub-base valves are supplied with external pilot air. The pilot air is set via the manifold rail. The scope of delivery of the manifold rail includes a short and a long blanking plug for setting the pilot air.

- For sub-base valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)
- For 2x 3/2-way, 3/2-way, 5/2-way and 5/3-way valves
- 4 to 24 valve positions with electrical links

Long version

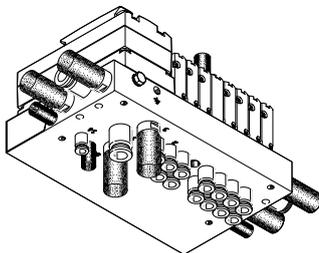

Versions:

- I-Port interface with outlet direction on the side: for semi in-line valves and sub-base valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)

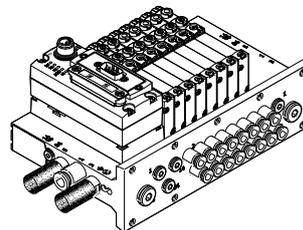

- Interlock: For sub-base and semi in-line valves M5/M7 (size 10)

For control cabinet installation, outlet direction underneath (U)

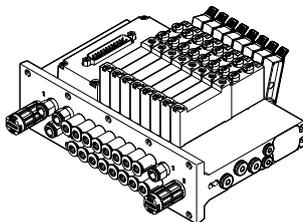

For sub-base valves M7 (size 10), G1/8 (size 14) and G1/4 (size 18).

For control cabinet installation, outlet direction at the front (FD)

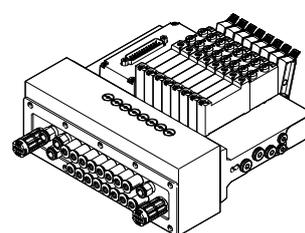

For sub-base valves M7 (size 10) and G1/8 (size 14).

For control cabinet installation, with shut-off function (hot swap)

Shut-off function for duct 1, for sub-base valves M7 (size 10) and G1/8 (size 14):

- Internal pilot air supply only
- Vacuum operation not possible

Shut-off function for ducts 1, 2 and 4, for sub-base valves M7 (size 10) and G1/8 (size 14):

- Internal pilot air supply only
- Vacuum operation not possible

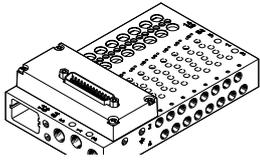

Note

Pressurisation and exhaust on both sides is recommended for an optimised flow rate in cases where multiple valves switch simultaneously.

Key features

Electrical connection

Multi-pin plug connection

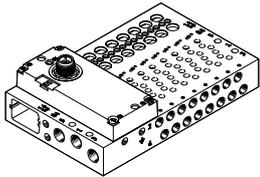

The signals are transmitted from the controller to the valve terminal via a pre-assembled or self-assembled multi-core cable to the multi-pin plug connection.

This substantially reduces installation time compared to individually connected valves. The valve terminal can be equipped with max. 48 solenoid coils.

Versions:

- Sub-D connection
- Ribbon cable

I-Port interface

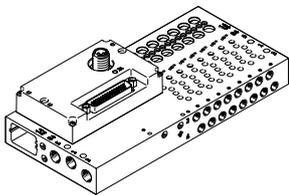

Festo-specific interface as a basis for bus nodes (CTEU) or in IO-Link® mode for direct connection to a higher-order IO-Link master.

Communication and power supply take place via a common M12 interface.

Connection options:

- As I-Port interface for bus nodes (CTEU)
- In IO-Link® mode for direct connection to an IO-Link master

I-Port interface with interlock

The interlock function enables the first 16 solenoid coils to be individually supplied externally.

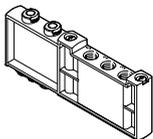

This ensures that these valves can be released in a safety-oriented way.

Note

The VTUG variant with multi-pin plug connection and fieldbus interface offers the additional option of electrically actuating the individual valves (a page 25).

Supply plate

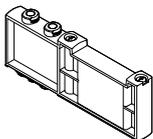

For additional air supply and exhaust via a valve position (ports for duct 1, 3 and 5).

Note

The supply plate VABF-L1-14-P3A4-G18-T1 can only be used with G fittings. R fittings are not permissible.

Cover plate for vacant position

Vacant position cover

Separator for pressure zones

For creating multiple pressure zones in a valve terminal

Key features – Pneumatic components

Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold rail and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VTUG.

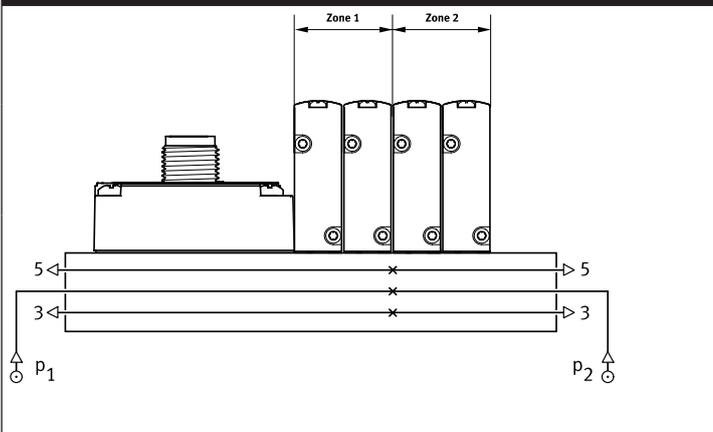

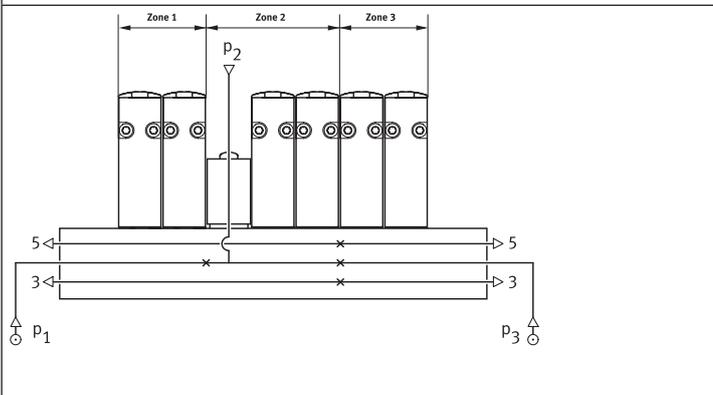

A pressure zone is created by separating the internal supply ducts using a separator.

Pressure zone separation can be used for the following ducts:

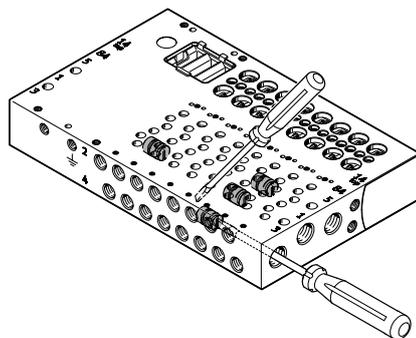

- Duct 1
- Duct 3
- Duct 5

 **Note**

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/air supply for each pressure zone
- Pressure zone separation is not possible in duct 12/14 (pilot air supply)

Duct separation	Description						
	<p>The pressure zones can be freely configured with the VTUG. The following duct separations are possible:</p> <table border="1" data-bbox="826 806 1513 1137"> <tr> <td data-bbox="826 806 1173 918">Duct 1 closed</td> <td data-bbox="1173 806 1513 918">  </td> </tr> <tr> <td data-bbox="826 918 1173 1030">Duct 1, 3, 5 closed</td> <td data-bbox="1173 918 1513 1030">  </td> </tr> <tr> <td data-bbox="826 1030 1173 1137">Duct 3, 5 closed</td> <td data-bbox="1173 1030 1513 1137">  </td> </tr> </table>	Duct 1 closed		Duct 1, 3, 5 closed		Duct 3, 5 closed	
Duct 1 closed							
Duct 1, 3, 5 closed							
Duct 3, 5 closed							
	<p>The number of pressure zones with the VTUG is limited by the number of valve positions on the manifold rail. Note that each supply plate occupies one valve position.</p>						

Separator VABD

[1] Separator VABD

 **Note**

On the VTUG, several pressure zones can be created by mounting separators (VABD). The separators are inserted in the manifold rail using a slotted screwdriver.

Key features – Pneumatic components

Shut-off function (hot swap)

For duct 1

- [1] Actuating lever
- [2] Manifold rail with shut-off plate

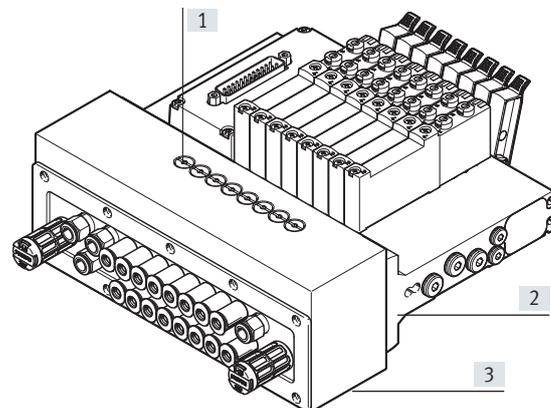

The shut-off plate is located below the manifold block. Actuating the lever:

- Disconnects the valve position from the compressed air supply (duct 1)
- Exhausts the pilot air supply on the valve side (duct 12 and 14)

Note the user instructions for use in combination with a supply plate

The actuating levers can be individually locked in place, securing them against unwanted actuation.

For duct 1, 2 and 4

- [1] Plunger
- [2] Manifold rail
- [3] Manifold block

To actuate, press in the plunger with a pointed object or screwdriver and then turn clockwise 90° until the stop is reached:

- Connection from the valve position to ports 2 and 4 is blocked
- The components connected at ports 2 and 4 are not exhausted

Pilot air supply

Internal pilot air supply

Internal pilot air supply can be chosen with an operating pressure between 1.5 ... 8 bar, 2.5 ... 8 bar, or 3 ... 8 bar (depending on the valve used).

The pilot air supply is branched from duct 1 (compressed air supply) using an internal connection.

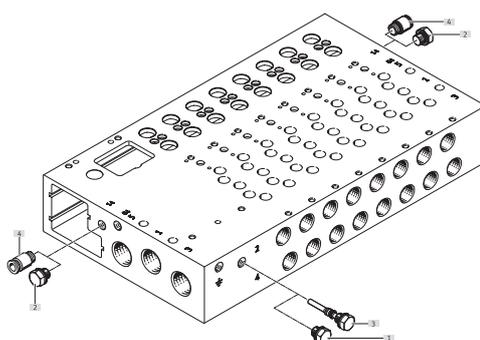

External pilot air supply

External pilot air supply is required for vacuum operation or operating pressures above 8 bar. The port for external pilot air supply (port 12/14) is located on the manifold rail.

Pilot exhaust air

The pilot air is exhausted via duct 82/84 of the manifold rail.

Pilot air supply

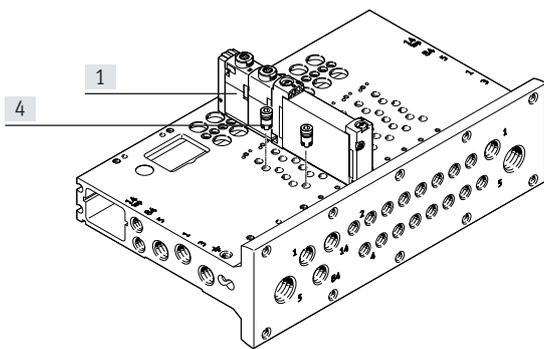

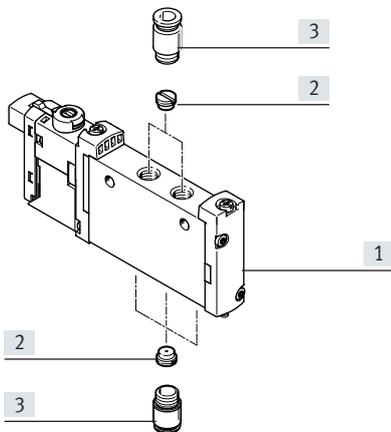

- [1] Blanking plug, short, for internal pilot air
- [2] Blanking plug for duct 12/14 with internal pilot air
- [3] Blanking plug, long, for external pilot air
- [4] Push-in fitting for duct 12/14 with external pilot air

The manifold rails have an internal connection between duct 12/14 and duct 1.

By inserting a blanking plug into this connection, it is possible to switch between internal and external pilot air.

Key features – Pneumatic components

Exhaust functions

- [1] Valves VUVG
- [2] Flow restrictor for M5 thread
- [3] Fitting
- [4] Fixed flow restrictor, self-tapping/check valve

Flow restrictor for M5 thread

Semi in-line valve, individual electrical connection: flow restrictor can be fitted in port 1, 3, 5 and/or in port 2, 4.

Sub-base valve, individual electrical connection: flow restrictor can be fitted in port 2, 4.

Fixed flow restrictor, self-tapping

The fixed flow restrictor can be used to permanently set the exhaust flow rate in ducts 3 and 5.

The fixed flow restrictors are screwed into ducts 3 and 5 in the manifold rail.

Please see the relevant assembly instructions:
www.festo.com/catalogue/... a Support/Downloads

Check valve

Check valves block the flow towards the valves, thus preventing actuators from switching unexpectedly if back pressure develops in ducts 3 and 5 in the case of a high exhaust capacity. The check valves are screwed into ducts 3 and 5 in the manifold rail.

Please see the relevant assembly instructions:
www.festo.com/catalogue/... a Support/Downloads

Note

- It is not possible to use a check valve and a fixed flow restrictor (in the same duct) at the same time.
- When screwing in again, use the threads already present.

Key features – Pneumatic components

Operation with different pressures

Vacuum operation

Points to note with 3/2-way valves with pneumatic spring return:

The 3/2-way valves are available in a design with two valves in one valve body and with pneumatic spring return. With these valves, the force for the return movement is obtained from port 1.

Vacuum operation is only possible at port 3 and 5, not at port 1. With external pilot air supply, vacuum can be connected at port 1, 3, 5 of the 5/2-way and 5/3-way valves.

Vacuum operation is not possible when using the shut-off function (hot swap).

Reverse operation

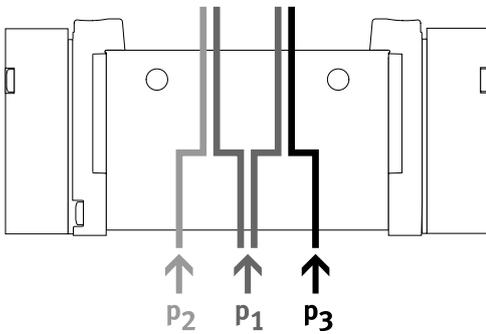

The 3/2-way valves with pneumatic spring are not suitable for reverse operation, since at least the minimum pilot pressure must be present in duct 1.

Note

Pressure must be present at port 1.

Pressure divider (internal pilot air)

- Two different pressures are required
- Different pressures can be connected at duct 1, 3 and 5

Advantages

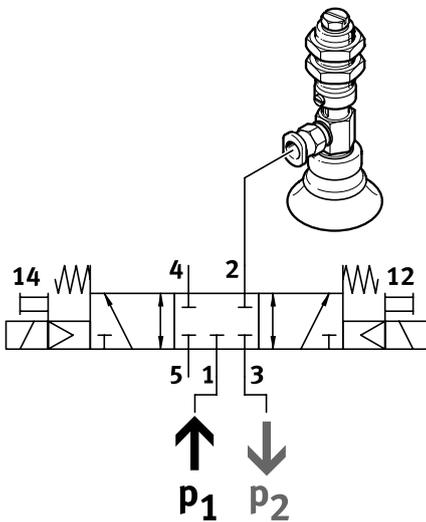

Any pressure or vacuum can be connected at duct 3 and 5 both with external and internal pilot air

Note

- With internal pilot air, keep the pilot pressure in duct 1 to the minimum
- With 2x 3/2-way valves without spring return, keep the pilot pressure in duct 1 to the minimum

Vacuum, ejector pulse and normal position

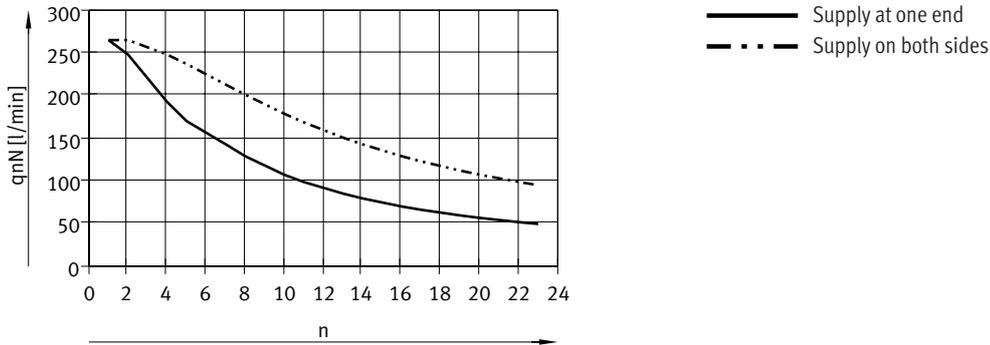

Vacuum, ejector pulse and normal position with internal pilot air can be achieved by connecting vacuum at duct 3 and pressure for the ejector pulse at duct 1.

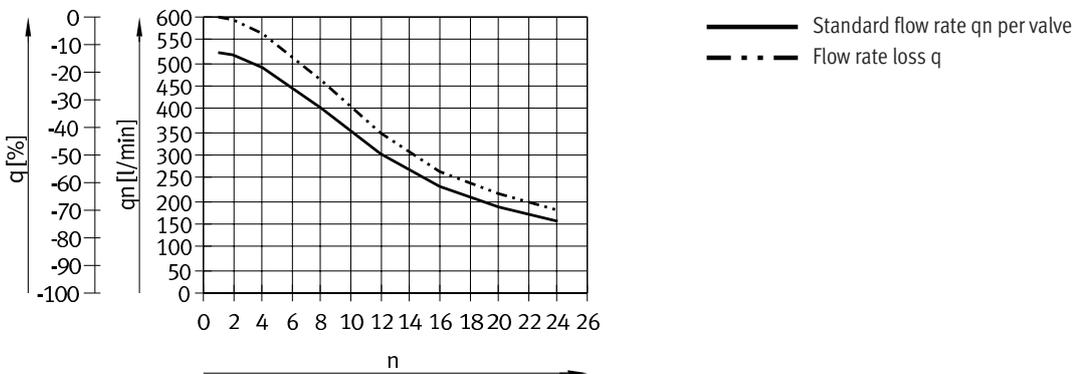

Key features – Pneumatic components

Standard nominal flow rate q_{nN} as a function of the number of switched valves n

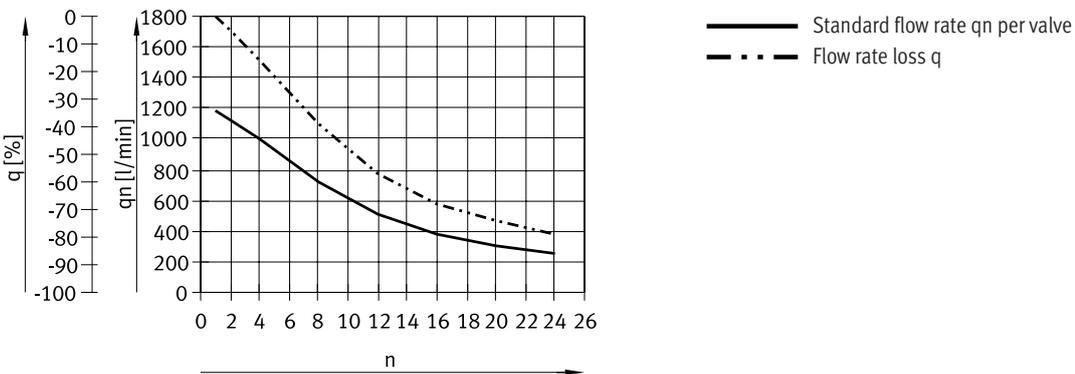

Size 10 mm, 5/2-way valves

Size 14 mm

Size 18 mm

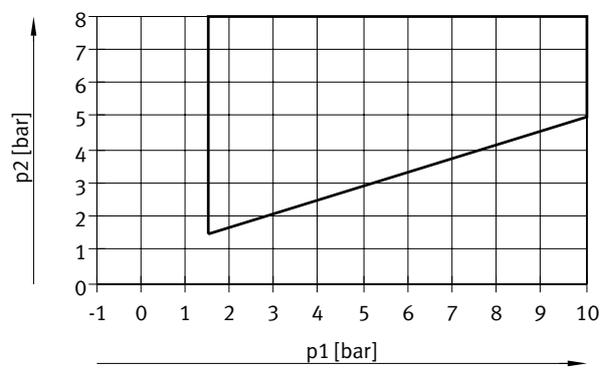

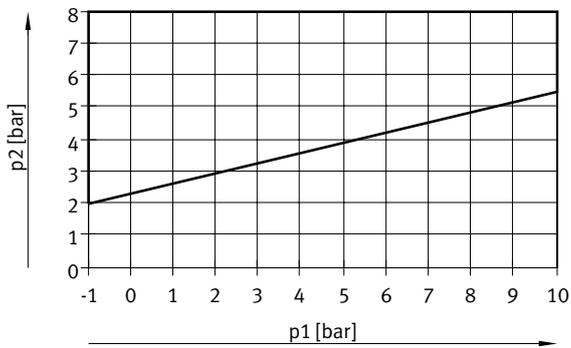

Key features – Pneumatic components

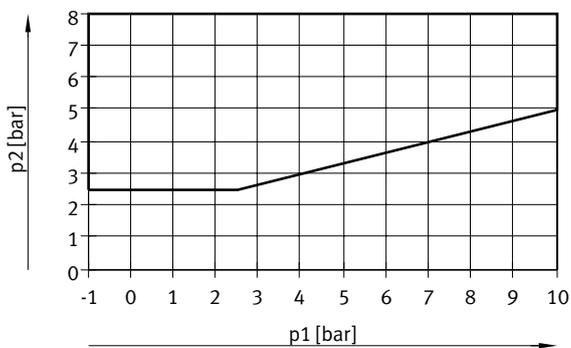

Pilot pressure p_2 as a function of operating pressure p_1

2x 3/2-way valve, mechanical spring return

2x 3/2-way valve, pneumatic spring return

3/2-way single solenoid valve and 5/2-way single solenoid valve

Key features – Mounting

Valve terminal mounting

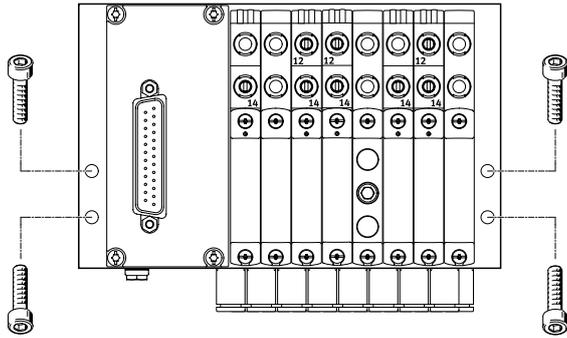

Sturdy terminal mounting via:

- Four through-holes for wall mounting
- DIN rail mounting
- Mounting bracket

 **Note**

Use the M5 thread provided on the manifold block for earthing the valve terminal.

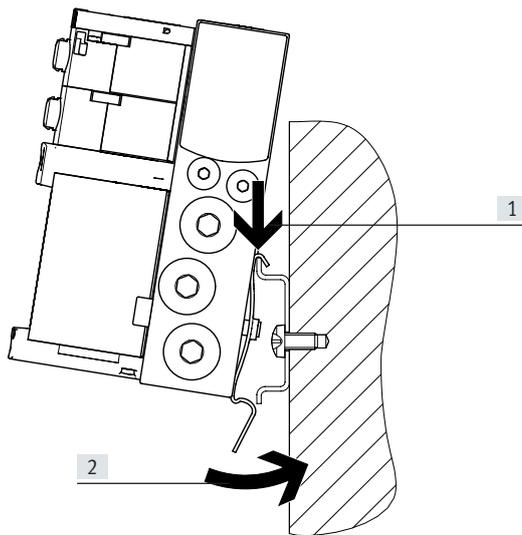

Wall mounting

Screw the valve terminal VTUG onto the mounting surface using four M4 screws.

The mounting holes are on the left and right side of the manifold rail.

DIN rail mounting

Clip the valve terminal VTUG onto the DIN rail (see arrow [1]).

Swivel the valve terminal onto the DIN rail and secure in place with the clamping piece (see arrow [2]).

Attach the manifold rails to a rail to EN 60715-TH35 using the DIN rail mounting VAME-T-M4.

Use the following screws for mounting (to DIN 912):

- Size 10: M4x30
- Size 14: M4x40
- Size 18: M5x50

 **Note**

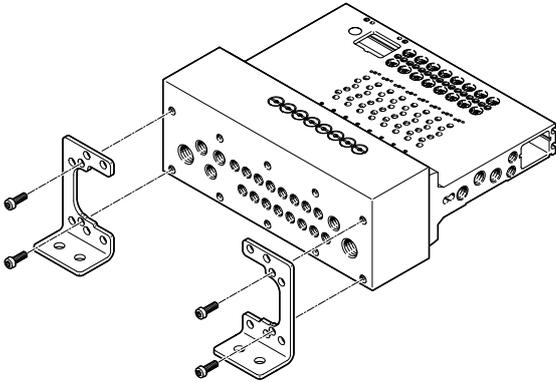

Use of the DIN rail is allowed:

- Manifold rail with outlet on the side or on top.
 - DIN rail exclusively for horizontal mounting.
 - Vibration/shock loads are not permissible for this type of mounting.
- Size 14:
- Use DIN rail type TH35-7.5 for valve terminals with a maximum of 8 valve positions.
 - Use DIN rail type TH35-15 for mounting in accordance with the standard and for more than 8 valve positions.

Key features – Mounting

Valve terminal mounting

Mounting with mounting bracket

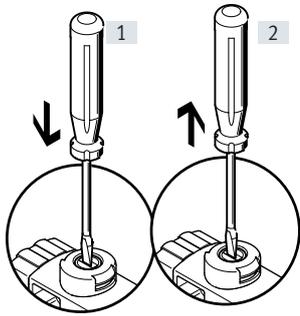

The valve terminal VTUG is screwed to the mounting bracket using four M4x16 screws. This enables the valve terminal to be mounted horizontally on the mounting surface.

The mounting brackets can be combined with the manifold rail for sub-base valves, for control cabinet installation with outlet direction at the front.

Key features – Mounting

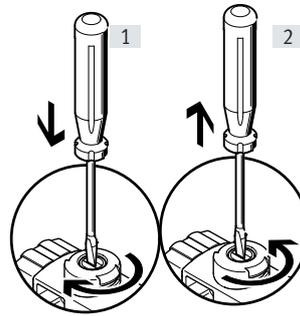

Manual override (MO)

MO with automatic return (non-detenting)

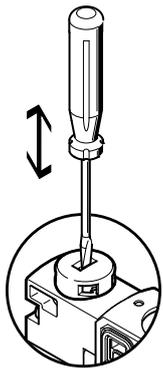

- [1] Press in the plunger of the MO with a pointed object or screwdriver. The pilot valve switches and actuates the main valve.
- [2] Remove the pointed object or screwdriver. The spring force pushes the plunger of the manual override back. The pilot valve returns to its normal position as does the main single solenoid valve (not the case with double solenoid valve code).

MO with locking (detenting)

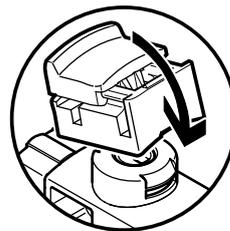

- [1] Press in the plunger of the MO with a pointed object or screwdriver until the valve switches and then turn the plunger 90° clockwise until the stop is reached. The valve remains in the switching position
- [2] Turn the plunger 90° anticlockwise until the stop is reached and then remove the pointed object or screwdriver. The spring force pushes the plunger of the manual override back. The valve returns to its normal position (not with double solenoid valve code).

MO non-detenting – with coded cover cap

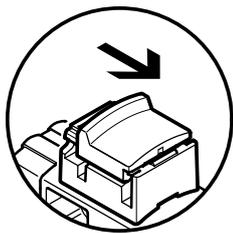

MO is actuated by pushing it with a pointed object or screwdriver and reset by spring force (detenting position prevented by coded cover cap).

MO detenting without tools – mounting

Turn MO to clip it onto the pilot valve. The cap for the MO can then be operated (detenting) without tools.

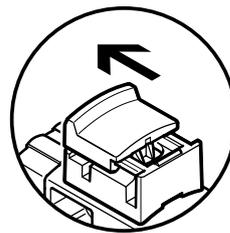

MO detenting without tools – actuation

Sliding the cap for the MO with latch in the direction of the arrow results in:

- Cap locks into the end position
- The pilot valve switches and actuates the main valve.

MO detenting without tools – actuation

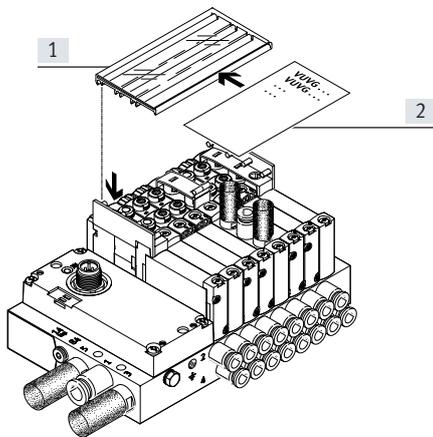

Sliding the cap for the MO with latch in the direction of the arrow results in:

- Cap locks into the end position
- The spring force pushes the plunger of the manual override back.
- The pilot valve returns to its normal position as does the main single solenoid valve (not the case with double solenoid valve code).

Key features – Mounting

Inscription system

Inscription label holder

- [1] Label holders ASCF-H-L1 (code TT)
- [2] Inscription field

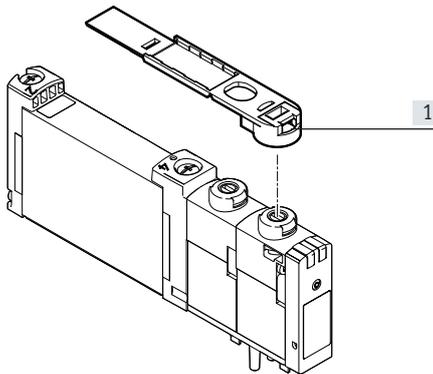

Mount the label holders to label the valves. Open the label holder to insert the inscription label and actuate the manual override.

The label holders are available in different sizes depending on the number of valve positions.

Note

Do not engage the manual override before mounting the label holder. When mounted, the retaining bracket for the label holder covers the manual override of the valves beneath it. The manual override for the two valves under the retainers of the label holder can then only be operated as non-detenting.

Inscription label holder

- [1] Inscription label holders ASLR-D-L1 (code TV)

Use inscription label holders ASLR-D-L1 (code TV) to label individual valves.

The inscription label holder is placed directly on the manual override.

Note

Do not engage the manual override before mounting the inscription label holder. After the retaining brackets are fitted, the manual override can only be operated as non-detenting.

Overview of valve functions

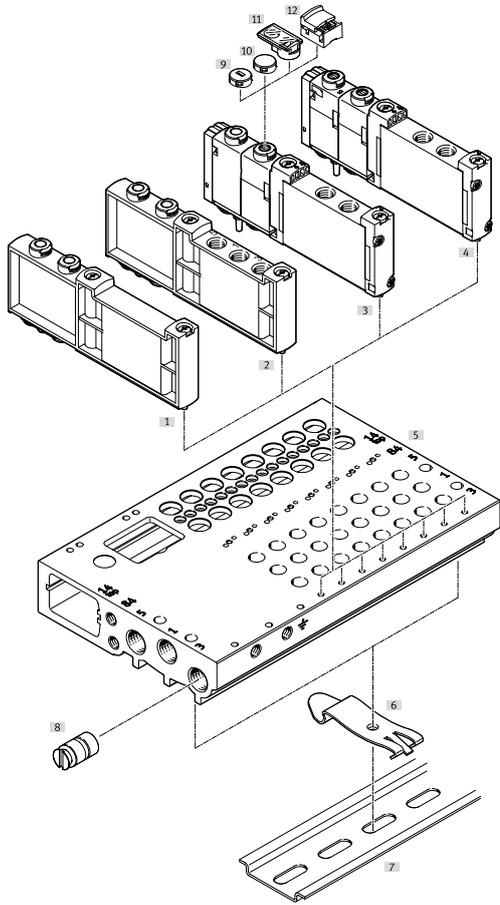

Valve	Valve code	Description	Size		
			M5/M7	G1/8	G1/4
3/2-way valve, pneumatic/mechanical spring					
	M32C-R	Normally closed	■	-	-

[6]	CTEU	CTEU-...	Bus node	89
[7]	Power supply socket	NTSD-.../FBSD-...	Power supply for CTEU bus nodes	90
[8]	Connecting cable	NEBU-...	–	nebu
[9]	Electrical connection block	CAPC-F1-E-M12	For connecting a second device with I-Port interface	85
[10]	DIN rail mounting	CAF-M-F1-H	For electrical connection block CAPC	85
[11]	Inscription label holder	ASCF-H-L1	For identifying valves	95
[12]	Blanking plug	B-...	For internal/external pilot air	91
[13]	Silencer	U-...	For port 3 and 5	92
[14]	Push-in fitting	QS-...	For air supply, port 1	91
[15]	Push-in fitting	QS-...	For port 2 and 4	91

Peripherals overview example – Sub-base valves

Valve terminal with multi-pin plug/fieldbus connection and individually electrically actuated valves

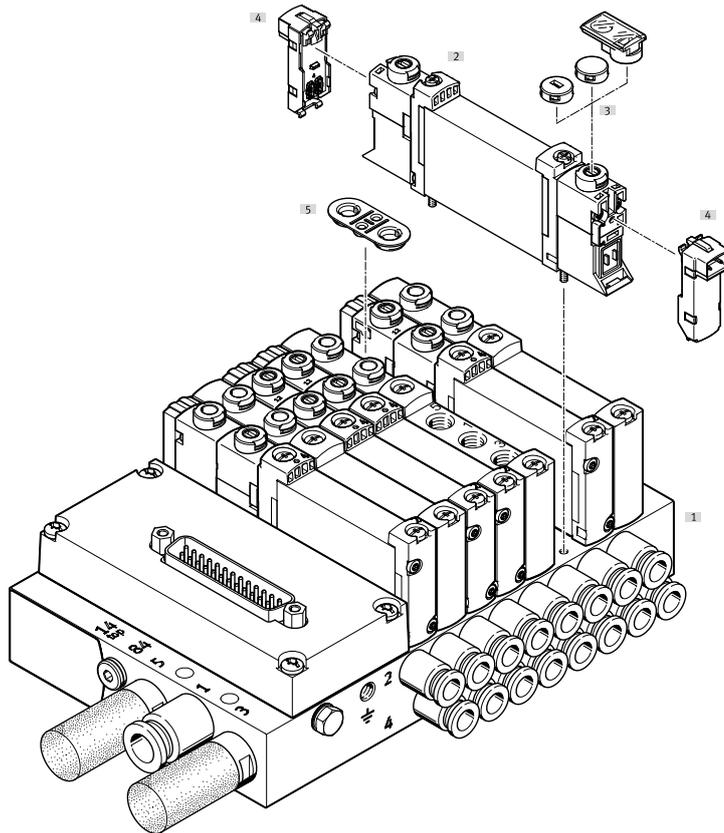

In applications with specific emergency off requirements, it may be necessary to switch one or more valves separately from the valve terminal controller.

Valves VUVG (aVUVG) with an individual electrical connection are therefore mounted on the valve terminal.

Valves with an individual electrical connection require a special seal when mounted within a valve terminal.

They are therefore ordered/fitted as follows:

- Together with the valve terminal using the valve terminal configurator
- Individually/to replace a cover plate in a vacant position at a later date

Accessories		Type	Description	→ Page/Internet
[1]	Manifold rail	VABM-L1-10	For 2 to 10, 12 and 16 valve positions	48
[2]	Solenoid valve	VUVG	Sub-base valve	29
[3]	Cover cap	VMPA	For manual override	93
[4]	Electrical connection block	VAVE	For individual connection	vave
[5]	Seal	–	Included in the scope of delivery of the cover plate for a vacant position	92

Ordering data

Description	Part no.	Type
Sub-base valve G1/8		
3/2-way valve		
External pilot air supply	Normally closed, pneumatic spring return	8028235 VUVG-B14Z-M32C-AZT-F-1T1L
	Normally open, pneumatic spring return	8028236 VUVG-B14Z-M32U-AZT-F-1T1L
2x 3/2-way valve		
External pilot air supply	Normally closed, pneumatic spring return	573476 VUVG-B14-T32C-AZT-F-1T1L
	Normally open, pneumatic spring return	573477 VUVG-B14-T32U-AZT-F-1T1L
	1x normally open, 1x normally closed, pneumatic spring return	573478 VUVG-B14-T32H-AZT-F-1T1L
	Normally closed, mechanical spring return	573479 VUVG-B14-T32C-MZT-F-1T1L
	Normally open, mechanical spring return	573480 VUVG-B14-T32U-MZT-F-1T1L
	1x normally open, 1x normally closed, mechanical spring return	573481 VUVG-B14-T32H-MZT-F-1T1L
5/2-way valve, monostable		
External pilot air supply	Pneumatic spring return	573482 VUVG-B14-M52-AZT-F-1T1L
	Mechanical spring return	573483 VUVG-B14-M52-MZT-F-1T1L
5/2-way valve, bistable		
External pilot air supply		573484 VUVG-B14-B52-ZT-F-1T1L
5/3-way valve		
External pilot air supply	Mid-position closed, mechanical spring return	573485 VUVG-B14-P53C-ZT-F-1T1L
	Mid-position pressurised, mechanical spring return	573487 VUVG-B14-P53U-ZT-F-1T1L
	Mid-position exhausted, mechanical spring return	573486 VUVG-B14-P53E-ZT-F-1T1L

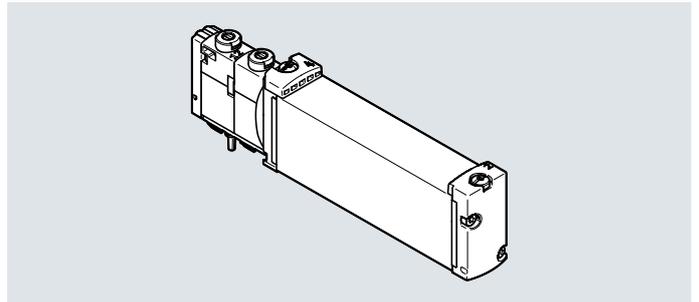

Datasheet – Sub-base valve G1/4

Function

2x 3/2C, 2x 3/2U, 2x 3/2H
 5/2-way, single solenoid
 5/2-way, double solenoid
 5/3C, 5/3U, 5/3E

Circuit diagrams a Page 17

-  - Size 18 mm
-  - Flow rate
800 ... 1000 l/min
-  - Voltage
24 V DC

General technical data												
Valve function	T32-A			T32-M			M52-R	B52	M52-M	P53

Datasheet – Multi-pin plug connection

The following multi-pin plug connections are available for the valve terminal VTUG:

- Sub-D (25-pin)
- Sub-D (44-pin)
- Ribbon cable (26-pin)
- Ribbon cable (50-pin)

Electrical multi-pin

Each pin on the multi-pin plug can actuate exactly one solenoid coil.

If the maximum configurable number of valve positions is 24, this means that 48 valve functions can be addressed.

The valves can be switched using positive or negative logic (positive switching or negative switching).

Mixed operation is generally not possible; however, an exception is made for the V22 ... V25 variants with 25-pin Sub-D. With these variants, a specific range of valve positions (e.g. Com 16...19) is supplied with common voltage.

This allows these ranges to be switched with positive or negative logic and valve groups to be switched off independently of the other ranges. Mixed operation within a range is not permitted.

Note

A double solenoid valve occupies one valve position and two pins on the multi-pin plug. This means that the number of double solenoid valves per manifold rail is limited. (Pin allocation a Page 75)

General technical data

Datasheet I-Port interface/IO-Link®

Festo-specific, standardised interface for direct connection to the fieldbus by mounting the bus node CTEU or to an IO-Link master via a cable (in IO-Link® mode).

I-Port interface/IO-Link®

Versions:

- I-Port interface for bus nodes (CTEU)
- IO-Link® mode for direct connection to a higher-level IO-Link master

The following protocols are supported in connection with the associated

CTEU bus node:

- CANopen
- DeviceNet®
- PROFIBUS
- CC-LINK®
- EtherCAT®
- AS-Interface
- PROFINET
- EtherNet/IP
- VARAN
- Festo installation system CPI

The electrical supply/transmission of communication takes place via an M12 plug.

The valve terminal can be equipped with 4 ... 24 (double solenoid) valves.

Datasheet – CAPC

Function

With the electrical connection block CAPC, the bus nodes CTEU can be installed decentrally on a valve terminal or input modules with I-Port interface.

Area of application

- M12 connection technology (two interfaces)
- Enables the installation of valve terminals or other devices over a distance of 20 metres
- With the accessory CAFM, the connection block can be installed on a DIN rail

General technical data

Type	CAPC-F1-E-M12

Datasheet – Interlock

Interlock

The interlock function enables the first 16 solenoid coils to be individually supplied externally.

This ensures that these valves can be released in a safety-oriented way.

The interlock interface is established via external contacts for a single-pin connection or via safety output terminals for a double-pin connection.

General technical data

Types of communication	I-Port/IO-Link®	
Number of valve positions	4...24	
Max. number of solenoid coils	48	
Number of interlock solenoid coils	16	
Number of inputs for voltage feedback	18 (16x interlock + 2 group supply)	
Mounting position	Any	
Nominal flow rate	[l/min]	330
Product weight	[g]	80
Residual ripple	[V _{SS}]	4
Baud rate	COM3	[kbps] 230.4
	COM2	[kbps] 38.4
IO-Link®	Protocol	V1.0
	Connection technology	M12, A-coded
	Port type	Type B
	Number of ports	1
	Process data width OUT	6 bytes
	Process data IN	4 bytes
	Minimum cycle time	11.5 ms (2.3 ms per frame = 2 bytes of user data)
Corrosion resistance class CRC1)	2	

1) More information www.festo.com/x/topic/crc

Datasheet – Interlock

Interlock interface

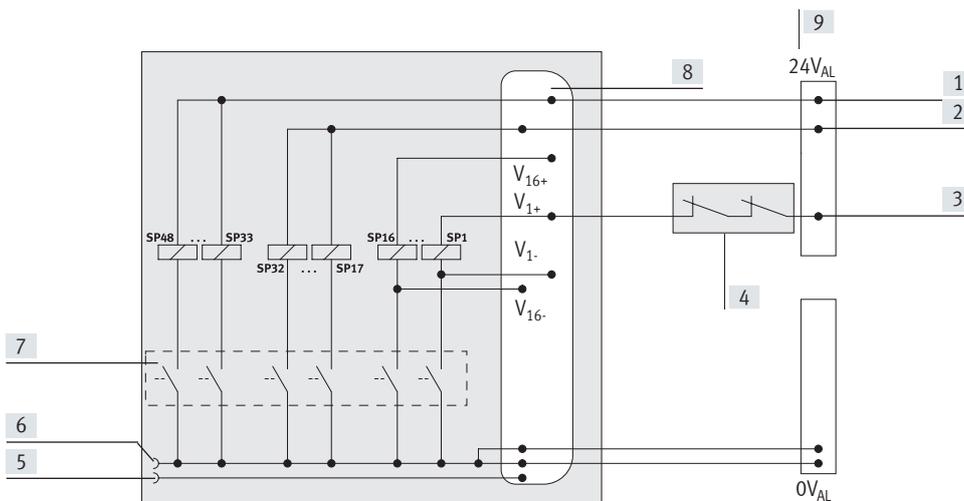

Single-pin interlock interface

- The interlock interface is established via external positive switching contacts or single-pin switching safety terminals
- 16 solenoid coils can be actuated via the interlock (Vn+)
- Solenoid coils that do not need to be actuated by the interlock can be supplied directly with 24 V via pins 1 ... 3
- Application of the respective input voltage is reported via the fieldbus as a process image

Double-pin interlock interface

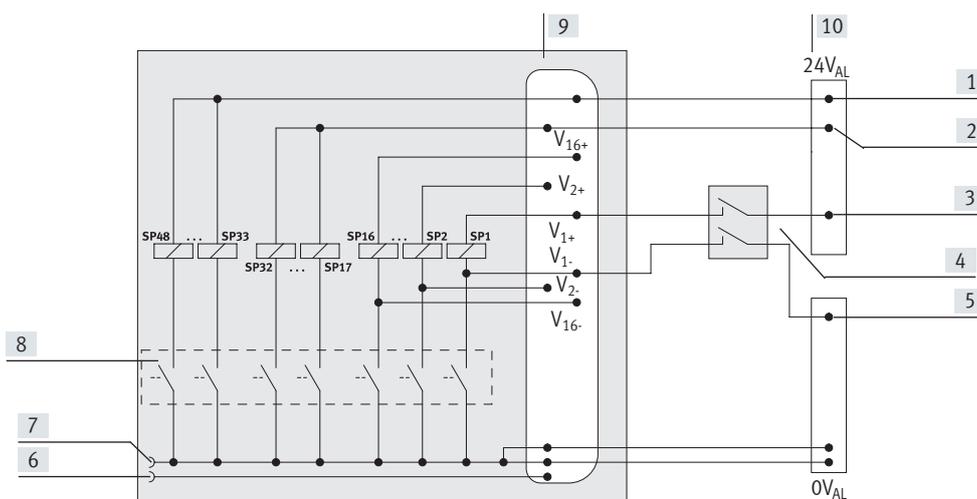

- The interlock interface is established via external positive-negative switching safety terminals
- The solenoid coils of the interlock valves are actuated via the corresponding pins in the sub-D plug (pins 7 ... 38)
- The solenoid coils that do not need to be actuated by the interlock can be supplied directly with 24 V (e.g. from pins 1 ... 3)
- Any difference in potential between Vn- and 0 VVAL/OUT must be below 5 V

Sample circuit diagram for a single-pin interlock interface

- [1] Power supply V+; solenoid coil 33 ... 48 (no interlock)
- [2] Power supply V+; solenoid coil 17 ... 32 (no interlock)
- [3] Actuation Vn+ (via interlock)
- [4] Interlock contacts of the output terminal
- [5] I-Port connection pin 2, 24 VVAL/OUT (PL), load voltage supply
- [6] I-Port connection pin 5, 0 VVAL/OUT (PL), load voltage supply
- [7] Driver, actuated via fieldbus/I-Port
- [8] Interlock Sub-D connection
- [9] Power supply (interlock)

Sample circuit diagram for a double-pin interlock interface

- [1] Power supply V+; solenoid coil 33 ... 48 (no interlock)
- [2] Power supply V+; solenoid coil 17 ... 32 (no interlock)
- [3] Actuation Vn+ (via interlock)
- [4] Interlock contacts of the output terminal
- [5] Actuation Vn- (via interlock)
- [6] I-Port connection pin 2, 24 VVAL/OUT (PL), load voltage supply
- [7] I-Port connection pin 5, 0 VVAL/OUT (PL), load voltage supply
- [8] Driver, actuated via fieldbus/I-Port
- [9] Interlock Sub-D connection
- [10] Power supply (interlock)
