

Solenoid valve VZWD-B

FESTO

Characteristics

At a glance

Directly actuated solenoid valves VZWD-B are mainly intended for applications with high pressure ranges and low flow rates. Directly actuated valves switch the sealing component directly via the solenoid system. The seal generally has to lift away from the seat against the effective operating pressure using just the actuator. A closing spring, supported by the pressure of the medium, keeps the valve closed. The function is dependent on the seat size, the effective operating pressure and the magnetic force. The difference with respect to force pilot operated solenoid valves (VZWF-B) lies in the flow rate.
