

Service unit combination MSB4

FESTO

Characteristics

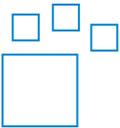

At a glance

Predefined or freely configurable service unit combinations.

- Grid dimension: 40 mm
- Depending on the application, consisting of filter regulator, filter, lubricator, on/off valve, soft-start valve, branching module

Ordering data - modular system

Configurable product

This product and all its product options can be ordered online via the configurator.

For explanations of the type code, see the downloadable additional document.

Engineering tools

[Link](#) [engineering tools](#)

A selection tool for sizing a suitable service unit component and the correct air purity class can be found under Engineering Tools.

Pneumatic connection

Depending on the size, different connection types can be selected:

- Individual fittings that are fastened via a female thread
- Connecting plates with female thread

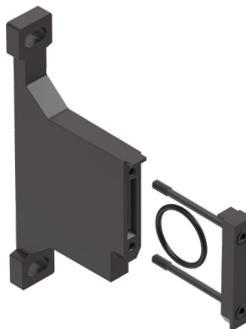

Type of mounting

[WP] Mounting bracket basic design

- For connecting the modules for wall mounting
- In combination with connecting plate MS4-AG... for mounting an individual device on a wall
- In conjunction with mounting plate MS4-AEND for wall mounting of a single device
- Same wall distance for mixing combination with MS4 and MS6 series

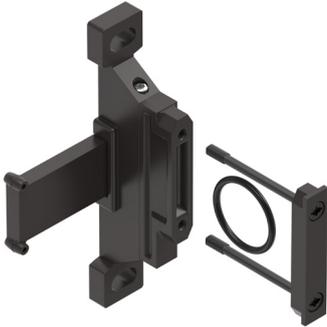

[WPB] Mounting bracket for large wall gap

- For connecting the modules for wall mounting
- In combination with connecting plate MS4-AG... for mounting an individual device on a wall
- In conjunction with mounting plate MS4-AEND for wall mounting of a single device
- Provides large wall gap for pressure regulator

Characteristics

[WPM] Mounting bracket for hooking in service unit components

- For connecting the modules for wall mounting
- In combination with connecting plate MS4-AG... for mounting an individual device on a wall
- Fast hooking and unhooking
- For installing modules with the regulator knob pointing downwards

EU certification

Selected types in accordance with the ATEX directive for potentially explosive atmospheres can be ordered via the configurator.

UL certification

Optional device variant UL1, which meets the safety requirements for the Canadian and US markets.

Flow direction

Available with flow in the opposite direction.

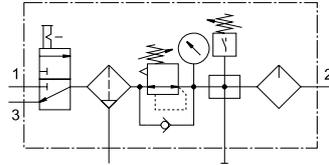

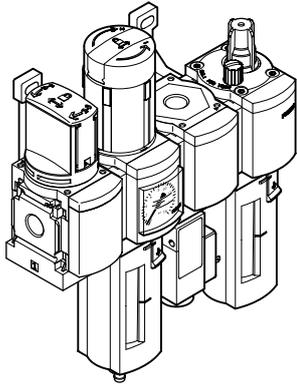

Service unit component equipment

The order of the individual service unit components within a combination is relevant for safety and functionality. The following rules must be taken into account:

- Regulators MS-LFR/LR/LRP are only permissible in the flow direction with an equal or decreasing pressure regulation range
- Filters MS-LFR/LF/LFM/LFX are only permissible in the flow direction with an increasing grade of filtration
- Lubricators MS-LOE are not permitted in the flow direction upstream of a filter MS-LFR/LF/LFM/LFX, water separator MS-LWS or membrane air dryer MS-LDM1
- A micro filter MS-LFM must be installed in the flow direction upstream of an activated carbon filter MS-LFX or membrane air dryer MS-LDM1
- A flow sensor SFAM cannot be installed directly downstream of a regulator MS-LFR/LR; a branching module MS-FRM must be positioned between them
- A soft-start/quick exhaust valve MS-SV must be the last service unit component in the flow direction

Datasheet

Technical data – Combination 1

- For filtered and lubricated compressed air supply.
- Supply pressure can be switched on or off
- Output pressure is infinitely adjustable within the pressure regulation range
- The system is exhausted when switched off.
- Electrical pressure monitoring with adjustable switching pressure.
- Removal of filtered and unlubricated compressed air at the ports of the branching module.

Setup:

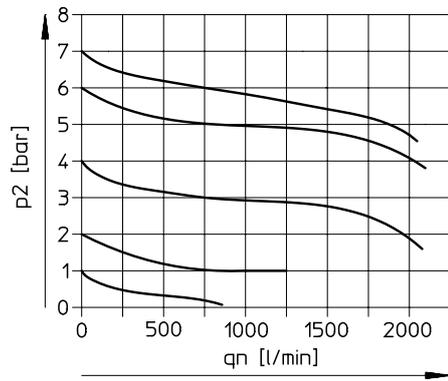

- On/off valve MS4-EM1, manually operated
- Filter control valve MS4-LFR-D7 with pressure gauge
- Branching module MS4-FRM-Y with pressure switch without display
- Lubricator MS4-LOE-R
- Mounting bracket MS4-WP
