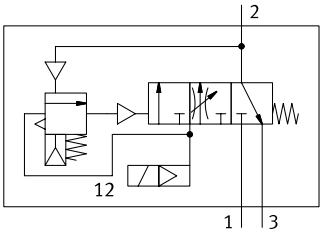
MS6N-SV-...-10V24C, -10V24D



Electropneumatic soft-start/quick exhaust valve for gradual pressurisation and quick exhausting of system components (single channel).
The main restrictor in the end cap permits a slower build-up of output pressure p2. Once the output pressure p2 has reached the set pressure switchover point (switching pressure), the valve opens and the full operating pressure p1 is available at the output.

- Suitable for applications with a high flow rate in restricted space with medium safety requirements up to controller category 1, Performance Level c
- High volumetric flow rate for pressurisation and exhausting
- The filling flow rate can be set for gradual pressure build-up with a restrictor
- Adjustable pressure switchover point
- Optional pressure sensor
- Optional covering for the control sections as tamper protection

Safety characteristics	
Conforms to standard	EN ISO 13849-1
Safety function	Exhaust
	Avoidance of unexpected start-up (pressurisation)
Performance Level (PL)	Exhausting: up to category 1, PL c
	Prevention of unexpected start-up (pressurisation): up to category 1, PL c
Note on forced checking procedure	Switching frequency min. once a month
CE mark (see declaration of conformity)[1)]	To EU Machinery Directive
Shock resistance	Shock test with severity level 2 to FN 942017-5 and EN 60068-2-27
Vibration resistance	Transport application test with severity level 2 to FN 942017-4 and EN 60068-2-6

Note

The mechanical system is not tested in the controlled (i.e. pressurised) state.

Forced switch on/off: switching frequency should be at least once a month.

If the process-related switching frequency (safe exhausting) is less than once a month,

the machine's operator must carry out a forced switch off.

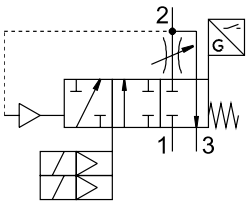
Function



- Flow rate
  4300 l/min
- Temperature range
  –10 ... +50°C
- Operating pressure
  3.5 ... 10 bar
- www.festo.com

The electropneumatic soft-start/quick exhaust valve is used to reduce pressure quickly and safely and to build up pressure gradually in industrial pneumatic piping systems and terminal equipment.
The device is a self-testing, redundant mechatronic system conforming to the requirements of EN ISO 13849-1. The safety-related pneumatic protection objective of safe exhausting is also guaranteed in the event of faults inside the valve (e.g. due to wear, contamination, electronic faults). The 2-channel design and its monitoring enables the device to meet controller category 3 and 4 requirements. This enables a Performance Level of max. "e".
The device receives the secure enable signals (EN1/EN2) via the electrical connection (multi-pin plug socket NECA Sub-D, 9-pin or AS-i connecting cable). These signals are generated commercially available electronic or electromechanical safety switching devices which monitor the protective equipment of the machine (e.g. emergency stop, light curtain, electrical door switch of a protective enclosure, etc.).

- Performance Level "e"/Category 4 to EN ISO 13849-1
- Conforms to standard IEC 61508
- Switching time delay adjustable via a restrictor for gradual pressure build-up
- Optional pressure sensor

Note

The MS6N-SV-...-E-10V24 should only be used in combination with the multi-pin plug socket NECA approved for it. The multi-pin plug socket can be ordered via the modular product system (MP... ➔ 21) or as an accessory (NECA ➔ 22).

Note

To avoid back pressures, it is recommended that the device be operated together with the silencer UOS-1. The silencer can be ordered via the modular product system (SO ➔ 21) or as an accessory (UOS-1 ➔ 24).

Note

Only devices that do not impair the pneumatic protective measure – safe exhausting – may be placed downstream of the MS6-SV-...-E.
The MS6-SV-...-D is not approved for use as a press safety valve.

Note

The mechanical system is not tested in the controlled (i.e. pressurised) state.

Forced switch on/off: switching frequency should be at least once a month.

If the process-related switching frequency (safe exhausting) is less than once a month,

the machine's operator must carry out a forced switch off.

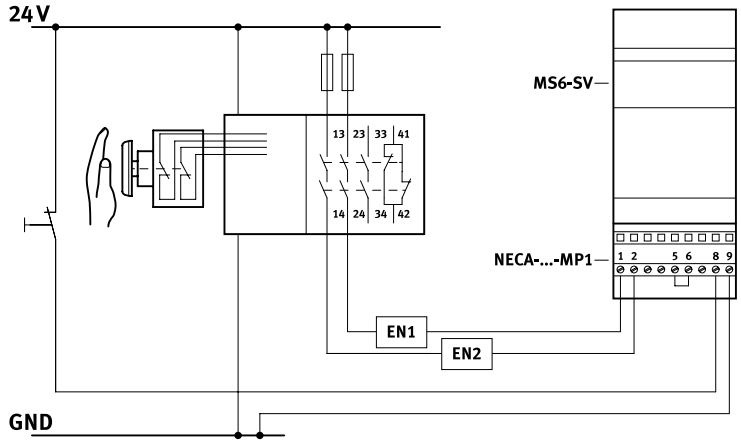
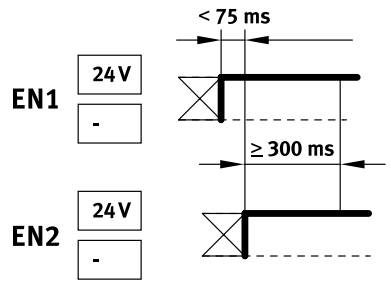
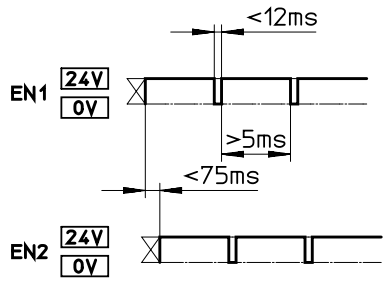
MS6-SV-E-10V24 with multi-pin plug socket NECA

NECA-...-MP1





- Static enable signals (EN1 = 24 V, EN2 = 24 V).



- Cycle end enable signals (EN1 = 0 ... 24 V, EN2 = 0 ... 24 V) for detecting cross-circuits.
  Detection of cross-circuits by clock signals is always carried out by the safety relay unit/safety PLC.

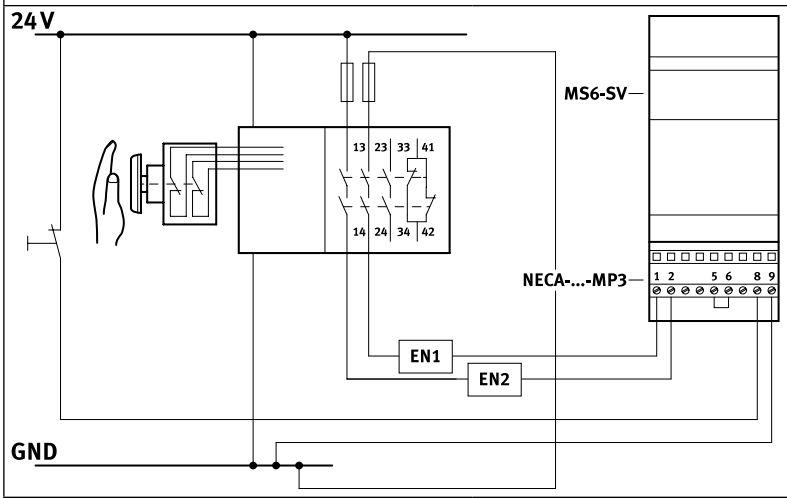
Note

Since the clock outputs from different controller manufacturers are not standardised, their usability must be checked in each case. If the clock pulse is outside the specified limits, the MS6N-SV-...-E-10V24 detects is as an error and a safe shutdown is initiated.

Datasheet MS6N-SV-E

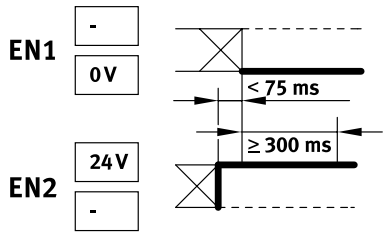
MS6-SV-E-10V24 with multi-pin plug socket NECA

NECA-...-MP3



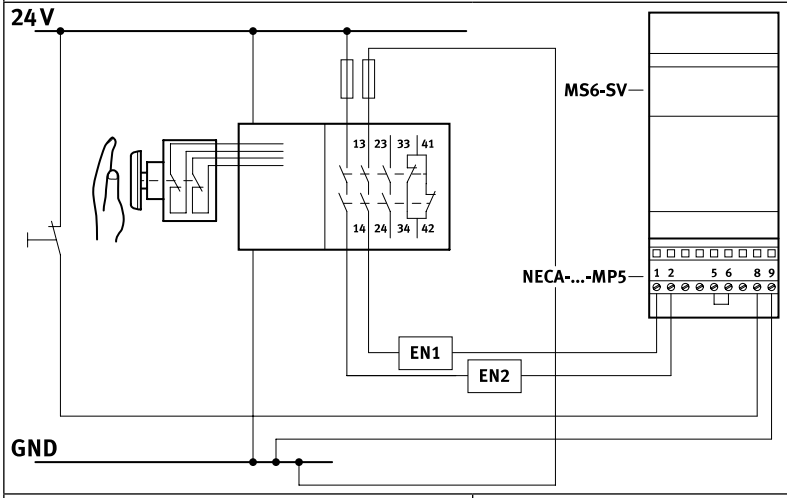
Note

The multi-pin plug socket NECA-S1G9-P9-MP3 is intended for conventional circuitry with electromechanical safety relays. If problems arise when used with bipolar semiconductor outputs, use the multi-pin plug socket NECA-S1G9-P9-MP5.



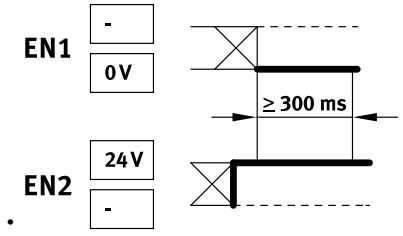
- Static enable signals with opposite potentials.
- Time delay of the level change of the enable signals is monitored.
- Behaviour on detection of a cross-circuit:
  - MS6N-SV-...-E-10V24 in exhausted state: remains in safe state and goes into error mode.
  - MS6N-SV-...-E-10V24 in pressurised state: goes into safe state and goes into error mode.

NECA-...-MP5



Note

A cross-circuit between the enable signals EN1/EN2 is not detected and does not cause an error response. The system is pressurised only if the enable signals are applied correctly.



- Static enable signals with opposite potentials.
- Time delay of the level change of the enable signals is not monitored.
- Behaviour on detection of a cross-circuit (by upstream safety relay unit/PLC):
  - MS6N-SV-...-E-10V24 in exhausted state: remains in safe state and does not go into error mode.
  - MS6N-SV-...-E-10V24 in pressurised state: goes into safe state and does not go into error mode.
- Enable signals are galvanically separated from the supply voltage.

Note

The time delay between EN1 and EN2 must be automatically determined. The duration of the delay is not evaluated.
